BAD BLOOD AS THE RESULT OF . . . .

BAD BUSINESS METHODS.

THE ABOVE TRAGEDY happened in the State of Illinois and is the result of two farmers and neighbors doing a partnership business for several years, buying and selling hogs, cattle, etc. When the day of settlement came, there were no receipts or correct business records to show their business relations; consequently a tragedy. A difficulty which could have been avoided by giving and receiving the proper receipts and keeping a correct record of every business transaction.

INSTRUCTIONS

FOR USING

THE FARMERS' MANUAL.

1. **THE FARMERS' MANUAL** is one of the most complete and practical books ever placed into the hands of the farmer. It will be a safe guide in business and a correct guide in keeping accounts.

2. **Penmanship.**—The copies of the penmanship department are from the pens of the best penmen in America. They should be carefully studied and used as copies for practice. A few months of faithful work will make a good penman of the poorest writer.

3. **Book-keeping.**—The sets given in the following pages are to be used as models. The transactions written up are also given in full, so that every student will plainly see the simplicity of the arrangement. Book-keeping is an easy study and should be understood by all. Study the transaction first, and then study up the transaction written out in detail.

4. **Business Forms.**—This department of the work is a new and novel feature. The "business forms" as they occur are taken directly from actual business. They are the same size and the same form. The script type shows what is written in filling out the blank document, and the common type shows the form as printed before it is used in actual business. He who becomes familiar with all the *business forms* in THE MANUAL will understand the actual business *transactions.*

5. **Business Law.**—This department will speak for itself. All the laws pertaining to the farm and farm business are concisely and correctly given.

6. **The Insect Department.**—The time for raising fruit and many garden vegetables has gone by, unless some attention is given to the modern system of spraying or other methods of insect extermination. THE MANUAL gives all the different receipts for spraying and all modern methods for the extermination of farm and field pests. Every farmer should know something of the habits of insects as well as remedies for their extermination. THE MANUAL will give the desired aid.

7. **The Horse Department** will speak for itself. It is just what every farmer needs and must have if he is a practical man. The best bred horses in America are shown by beautiful illustrations, drawn by the best horse artist in America. Every horse is a perfect illustration of the original. The Medical and Training department has been prepared by the highest veterary authorities.

8. **Useful Tables.**—Last will be found a complete wages table, interest table and breeder's table, etc.; also the most complete and reliable cotton picker's and cotton seller's table ever published, which alone is worth the cost of the book. The cotton seller's table runs by sixteenths and twentieths from 3c up to 10c, and 300 pounds up to 699 pounds. No practical farmer or planter can afford to be without it.

ANIMAL INSTINCT.

WATCHING OVER HER DEAD BABY.

SAFE BUSINESS METHODS AND GOOD ADVICE.

1. Indifferent or careless methods of business produces trouble between relatives, neighbors and friends; creates dissatisfaction with those with whom business is transacted; produces controversy, often blows, and even murder.

2. "Be sure you are right, then go ahead," should be the maxim of every one who transacts business.

3. Millions of dollars are expended every year in law suits, and lawyers are paid fabulous fees, simply because people do not do business in a business-like way.

4. Anger blows out the lamp of the mind.

5. Keep cool and you command everybody.

6. If we estimate dignity by immediate usefulness, Agriculture is, undoubtedly, the first and noblest science.

7. If you keep a bank account long enough, it will one day keep you.

8. The best way to keep good your credit is never to use it.

9. A boy is better unborn than untaught.

10. Honor and profit do not lie always in the same sack.

11. Conceit may puff a man up, but it will never prop him up.

12. Wise sayings often fall on barren ground, but a kind word is never thrown away.

13. A pound of pluck is worth a ton of luck.

14. Pile luxury as high as you will,—health is better.

15. Lies exist only to be extinguished.

16. Little things are great to little men.

17. Politeness goes far, yet costs nothing.

18. Who gives a trifle meanly, is meaner than the trifle.

19. The miser robs himself.

20. Moderation is the pleasure of the wise.

21. A "crank" is all right, if you turn him the right way.

22. He that buys what he does not want will soon want what he cannot buy.

23. An obstinate man does not hold opinions, but they hold him.

24. Not only strike while the iron is hot, but make it hot by striking.

25. Tyranny and Anarchy are twin-sisters.

26. The end of all government is the happiness of the people.

27. A good name is better than bags of gold.

28. The great heroes are the great, brave, patient, nameless people.

29. A bad man becomes a worse man when he claims to be a saint.

HORACE GREELEY.

GETTING ON IN THE WORLD; OR, HOW TO SUCCEED.

1. **Energy and Success.**—This is essential to every moderate success. The man of energy controls circumstances otherwise unfavorable, and opens up avenues by which he advances to honor and wealth. The reason the sons of so many rich men are comparative failures is the want of energy. They have the ability to succeed as did their fathers, but they lack that stimulus which excites energy and calls into action the full strength of manhood. Energy is the active principle in man. It is the force which impels over and around all obstacles. The Almighty has planned that success cannot be attained without a struggle, having made an effort.

2. **Persevere In It.**—Never give up or leave the enterprise you have considerately selected for another that, for the moment, may appear more promising. A business is not built up in a month nor a year. Experienced men tell us that it matters not what a person engages in, by perseverance, he will succeed. Many men have prosecuted with energy and ability some enterprise until just on the eve of success, when, shutting their eyes to the prospects of reward, they abandon the project or sell out their chance to a newcomer, who steps in and enjoys the fruits of their labor, while they, allured by other schemes, start anew at something else which promises speedier results, only to repeat the failure.

3. **Be Prompt.**—This is a quality of the greatest importance to the farmer as well as to the business man. Depend on strengthening your credit by prompt payment of all engagements rather than by outside display in living, dressing or equipage. If possible, meet all obligations promptly; but this cannot always be done, and in such cases make a plain, straightforward statement beforehand, and ask for an extension. To a man who is prompt and business-like almost any creditor will cheerfully grant an extension of time. Those who give credit have no anxiety about such debtors.

4. **Knowledge of Human Nature.**—This is the ability to penetrate into other men's minds, to discover their motives and predict their actions. The working of the mind is indicated by the countenance, the tone of the voice or a tremor of the nerves, and by observation of these we have an indication of what the person's action will be. The study of these things is said to be the study of human nature, and is of the greatest value in business life. We can readily see the more prominent indications of anger, fear, etc., but to be able to read the mind and see the inner motives and desires of those with whom we come in contact is one of the most valuable traits, since it enables us to suit our words and actions to the case.

5. **Keep Your Own Counsel.**—Learn all you can of what is going on around you, but communicate little Never make a parade of your business, but go about it quietly and transact it in a business-like way. Do not

boast of your profits. Do not go about telling people what you are doing or what you propose to do. The successful business man, like the successful general, conceals his plans until he has fully matured and perfected them, and until the proper time for them to be known. Young men in the employ of others should know that their employer's business is their secret, to be kept strictly confidential. There are some people who can hardly keep a secret. It rankles and burns their brain, and they have no rest until it is disclosed to some one. Such persons will never attain a high degree of success.

6. **Foresight.**—The faculty of looking into the future and divining what will come to pass is of supreme importance in business life. The greatest success is found where this qualification is greatest. The man of foresight has just the articles that are in greatest demand. He owns acres of land now sought at high prices for building lots. Others say he is "in luck," but the truth is he foresaw the demand and prepared for it. It was not luck but calculation.

7. **Depend Upon Your Own Efforts.**—There is no short cut, no royal road to permanent success. Thousands have tried to find one; but they have all failed, miserably failed. Not advantages of birth or wealth, neither genius nor opportunity make the man; but his own efforts, his own right arm and manly enterprise—they achieve for him success, and wealth, and renown.

Do not be mercurial. Extraordinary success should not unduly elate you, nor, on the other hand, should discouragements easily depress you. A varying success is what you may expect; only do your duty.

8. **Business and Society.**—Cultivate friends and acquaintances in business. The former are won by years of honesty and integrity; but the latter are the daily reward of a courteous and affable demeanor. You may succeed without giving much thought to the social side of nature, but you will be compelled to labor a lifetime for the same reward you could have obtained in a few years. Enlarge the circle of your acquaintance among those who are so situated in life as to become your customers as far as you can without taking too much time from your business. Do not consider an hour or an evening taken occasionally for social interests as entirely lost. On the contrary, you should feel a citizen's interest in the moral, intellectual and benevolent enterprises of your neighborhood. The influence of every intelligent and upright business man in a community is beneficial, and it is your duty to exert this influence for the general welfare, not looking for any reward personally, but accept that compensation which comes from an extended favorable acquaintance.

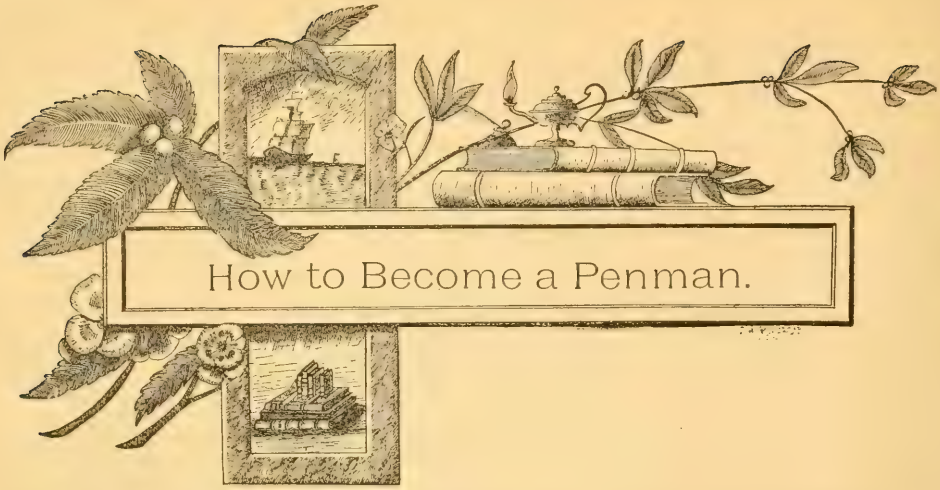
Beware of being drawn into social matters to the extent of causing a neglect of your business. Do not allow yourself to be president of this, secretary of that, and treasurer of the other, so that your time and energy is taken up with these matters to the injury of your business. Do not allow your store or office to become a club-room or a place for political meetings.

9. **A True Duty.**—Always regard the duty of exactness and promptness in fulfilling contracts and promises, no matter how trifling, and uniformly manage your business on these principles, not only strictly carrying them out in your own obligations, but strictly requiring them of others, and you will do much to keep alive and active that high sense of honor in the community which induces a man to consider his word as good as his bond.

ABRAHAM LINCOLN.

JAMES A. GARFIELD.

Self-Made Men.

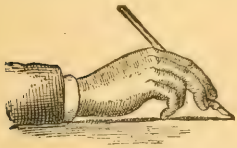


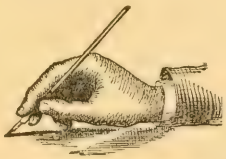
HOW TO LEARN TO WRITE, OR BECOME AN EXCELLENT PENMAN.

1. **Good Copies.**—When you practice, study the copy, see its harmony, and you will discover more of its beauty and find greater inspiration and interest in practicing. A successful student in penmanship must study the art and cultivate the beautiful, and practice until he can perfectly imitate the copy.

2. **Material.**—Have good paper. Do not buy a lot of cheap trash because it is cheap, but procure a good quantity and quality of paper and plenty of good steel pens. Use Spencerian Pen No. 1, Musselman's Perfection Pens, and you will also find some good pens among the Esterbrook and Gillott make. First find a pen that suits you best and then procure a box. It is much the cheapest to buy pens by the quantity.

3. **Gold Pens.**—Do not use gold pens while practicing. While learning to write always use a steel pen. Gold pens are very good after a good hand has been mastered.





4. **Correct Position.**—When writing sit at the desk or table in a position that is perfectly convenient and comfortable. Sit so that no portion of the body is cramped, and let the arm rest easily upon the table or desk. Do not sit with the feet upon the rounds of the chair. Keep your feet firmly upon the floor.

5. **How to Hold the Pen.**—Hold the pen so that the holder points over the right shoulder, and do not let the penholder drop below the knuckle joint of the forefinger.

6. **Movements.**—Finger movement is the combined action of the first and second fingers and thumb. Forearm movement is the action of the forearm sliding the hand on the nails of the third and fourth finger. Combined movement is that which is most used in business penmanship. It is a union of the forearm with the finger movement, and possesses great advantage over the other movements in the greater rapidity and ease with which it is employed. Whole-arm movement is the action of the whole arm from the shoulder with the elbow slightly raised and the hand sliding on the nails of the third and fourth fingers, and is used with facility in striking capital letters and in off-hand flourishing.

7. **Practice.**—In learning to write there are three essential things. The first is PRACTICE; the second is PRACTICE; the third is PRACTICE; and the student who carries out these three things will master an excellent handwriting. The old rule that "practice makes perfect" is doubly true in learning to write, and is the only principle that will successfully develop good penmanship.

8. **Careless Scribbling.**—Careless scribbling tends rather to retard than to improve the writing. Each time a copy has been carelessly repeated it is an injury rather than a benefit; a going backward instead of going forward. When practicing every stroke should mean something and be an effort to improve. Practicing with a purpose by everlastingly keeping at it will master and accomplish the high ideal. Writing is the result of study combined with practice.

9. **Written Copies.**—After having once written the copies, criticise your efforts before the next trial. By thus picking out your faults or errors you are cultivating the eye as well as the hand. Remember that unknown faults can never be avoided or corrected, and your first study should be to discover errors and faults and then try to mend.

10. **Letter Writing.**—While learning to write pick up as many correspondents as you can. Cultivate the habit of corresponding with your friends as much as possible. It makes a pleasant source of entertainment as well as excellent practice for the improvement of your penmanship. But be sure, however, and carry out the following principles: After writing a letter once, look it over carefully, detect the errors in composition and spelling, then re-write it again and notice the imperfect forms of letters and words, and then re-write it again. He that is willing to take this rule to himself and faithfully carry it out in all his correspondence, will become a good penman.

11. **Writing Not a Special Gift.**—It is often said that writing is a special gift, and only the few can become good penmen. This idea is not only fallacious but exceedingly pernicious, as it tends to discourage many pupils who write badly by leading them to believe that it is impossible for them to become good writers. There is scarcely a good penman to-day who is prominent before the people in the perfection of his art, who cannot show penmanship of his youth as poor as the poorest. Practice gives grace; correct form and construction of writing must be learned by study and practice, and the hand that is stiff will become limber and pliable, and the eye that is uncultivated will soon detect the slightest errors or deviations, and soon, unconsciously as it were, an easy flowing style of penmanship will have been mastered.

12. **How to Practice.**—There are various movement exercises that are a help in limbering up a stiff and awkward arm and hand. We have given some in the following pages, but it is a good practice to take a single letter, study its different styles and practice it until improvement is evident. Exercises made of small letters and joining them together in a running exercise is an excellent practice.

13. **The Safe Rule.**—Everlastingly keep at it.

BY THE TRACING PROCESS.

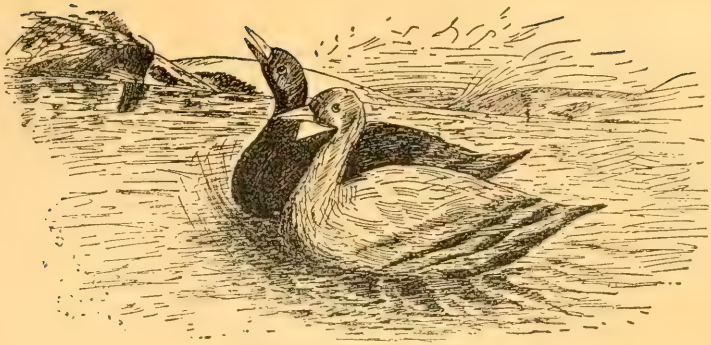
THE TRACING PROCESS.

INSTRUCTIONS FOR OUTLINING PICTURES AND LETTERS FOR PEN DRAWING.

1. **Tracing.**—The Tracing Process has long been known to some of the profession of penmanship, but it has been kept a sort of a secret. Many penman have paid $5.00 for the secret; some as high as $20.00. It is the quickest and best known way to make a fac-simile copy for pen work or pen drawing. It is simple, and a child can make an exact copy of any picture just as well as an older person.

2. **Material.**—Go to some druggist and ask him for a sheet or two of oiled tracing paper; if he hasn't it in stock he can send and procure it for you at a small expense.

3. **How to Use It.**—Take a slip or sheet of transparent tracing paper and place it on the picture to be copied; trace all the outlines that you desire to reproduce with a lead pencil, and be careful to keep the tracing paper in the same position. Use plenty of weight; hold the tracing paper down so that it cannot move from the position that it was in when you began the tracing. After you have done this, turn your tracing paper over. Then place your tracing paper, blacked side down, on your drawing paper, or where you wish to make your drawing, and take a fine-pointed lead pencil and trace over all the outlines and shadings of the entire picture. Thus you print in pencilings a perfect copy of the entire picture on your drawing paper. After you have done this it is a very easy matter to finish the picture with the pen and ink by putting ink on in place of the pencilings, and shade according to the original, erasing the pencil marks



BY THE TRACING PROCESS.

with a rubber after the ink is put on. Tracing over the paper for copy only leaves the marks very light and can easily be covered with pen and ink.

4. **Completion.**—After doing as above stated the work is ready to be completed, which is done by putting in the rest of the shading wherever it may be thought necessary; of course, it is necessary to run over the work with the pen and cover the lead pencil marks that have been left by tracing.

5. **Drawing Animals.**—The tracing process is especially adapted for tracing human figures, deer, lions and other animals; it is also excellent to get an outline of letters, but it is not so good for tracing birds. This should be done with a free, off-hand stroke, in order to look nicely, yet very good copies can be made.

6. **The Delineator** is very handy for the enlargement of pictures as for making copies same size.

Business Writing.

"Writing should always be adapted to the circumstances under which it is used. While mathematical exactness in spacing, height, slope, form and shade, is admirable and essential in primary copies, to give the learner proper ideas, it is not practical under all circumstances in business writing. An accountant is often required to give explanations of entries in his books, in a limited space, and in order to accomplish it must vary the size, slope and spacing of his letters accordingly. In all business writing the utmost modesty of display and simplicity of arrangement should be strictly observed."

HOW TO KEEP BOOKS.

1. **Great Mistakes.**—It is impossible to estimate the money lost annually, directly and indirectly, through careless methods of doing business. More than half the lawsuits are the outgrowth of some neglected or carelessly kept accounts, and millions of dollars are lost annually by the people of this country, because they will not do business intelligently.

2. **Important to Farmers.**—As a rule farmers are the most neglectful of all classes in keeping correct record of their accounts; they trust too much to the merchants and to other parties with whom they deal, or depend entirely upon memory, and many find it an expensive way, for they could often hire a bookkeeper for an entire year for the time and money lost in settling up a single difficulty, the outgrowth of carelessness.

3. **Hired Men.**—Few farmers make any account or record of the agreement with hired men. It is a serious neglect and a very unbusiness-like way to do business.

4. **How to Write a Contract with a Hired Man.** Write the name of the person employed, former residence, the date he begins work, the rate per month, the time for which he is hired and such other conditions as are agreed upon, either in the book for his account or on paper. It is best to give the person employed a copy of the agreement as written in the account book.

5. **Personal Account.**—In dealing with a hired man debit him or charge him for the amounts paid him and for lost time, and credit him with the wages agreed upon, and when the final payment is made or settlement agreed upon, a receipt should be given in full of all demands to date.

6. **A Good Business Principle.**—When you pay a bill, always take a receipt for the amount paid and file these receipts away in a safe place. It is a good plan to paste them in an old book, then they can be referred to easily, and you will always have a degree of security about you which may save you from some lawsuit or from paying a bill the second time.

7. **Keeping Accounts with Merchants.**—If you run a credit account at any store, you should have a small pass-book in which the entries should be made by the merchant. The book should be presented for entries whenever an article is purchased, and the day and date specified and the articles correctly entered.

8. **Cash Accounts.** — It is a very simple and easy thing for a Farmer or a Mechanic to keep a correct cash account. Place on the debtor side all the cash received On the credit side all the cash paid out. This principle of keeping accounts is often one of the safeguards of the family, and many persons of fortune to-day can

JAY GOULD.

trace their success to their keeping a strict cash account in their first struggles, and knowing where every dollar came from and what became of it. People in order to be successful in business must do business in a business-like manner. Study carefully the "Safe Methods of Business."

9. **Washington** said that agriculture was "the most healthful, the most useful and the most noble employment of man." But this is only true when the soil is suitably cultivated, the seed-time and harvest carefully observed, and when intelligence and energy are manifested in every branch of the work.

10. **The Sources of Wealth** are chiefly agriculture, manufacture, mining and trade.

11. **The Means of Wealth** are the outlays and returns made with intelligence, industry and skilled labor.

12. **Agriculture** is the cultivation of the ground. It includes grazing and the management of live stock. The soil, climate and market will generally indicate the kind of products which will be most profitable. The farm produces chiefly wheat, corn, rye, butter, beef, pork, mutton and poultry.

13. **Manufacture** changes the raw material into the forms suitable for use; for example, the flour mill grinds wheat into flour and corn into meal; the shoe factory makes leather into shoes; the cotton factory spins cotton into thread and weaves the thread into cloth, and the starch factory makes starch from corn.

Home Lessons in Book-Keeping.

Practical and Complete.

A Complete Education.—This is a practical age, and no young man's or young woman's education is complete without some knowledge of book-keeping and commercial accounts.

Our advice, therefore, is to every young man whether he expects to engage in active business life or not, that he thoroughly master the subject of book-keeping and the science of accounts.

Farmer and Mechanic.—The farmer and mechanic have found out, by dear experience, that it pays to keep a correct record of their business transactions instead of trusting entirely to the parties with whom they deal. Every man should know his own account and have a correct record of it.

A Great Necessity.—What the public wants is a plain simple style of book-keeping, that will require the the least amount of labor and yet explain in full, the transactions with others. The rules and forms which we give in the following will be not only practical and helpful to all, but can be safely relied upon as a brief, systematic, comprehensive and correct form.

SINGLE ENTRY BOOK-KEEPING.

Single Entry Book-keeping is the recording of business transactions with persons only, and the books used in single entry are the Day Book and the Ledger also a Cash Book and Bill Book may be used as a part of a set when deemed necessary.

A Single Entry Day Book is the book known in law as the Book of Original Entry and should contain everything that has been done or in other words a complete history of the business,

A Single Entry Ledger is a Book of Accounts with persons only. A Ledger proper represents a classification of accounts.

A Cash Book, when kept in single entry Book-keeping, should contain the items of all Cash received and all Cash paid out.

The Form of the Day Book, is Simple. First give the names of the persons to be debited or credited, whichever the case may be, by placing the words "Debtor"

or "Creditor," (abbreviated Dr. and Cr.) after the name. If a man purchases anything and does not pay for it, he is a debtor and must be debited; and when he pays for the same, he is a creditor and must be credited. In looking over the following set, the student will easily see when the term "Debit" or "Credit" is applied.

Practical Rules for Commencing Book-keeping. First, credit the proprietor with the resources or what he puts into the business. Second, debit the proprietor with the debts he owes or assumes. Third, personal accounts with other persons put into the business, debit the person with the full amount he owes, and credit the proprietor with the amount of the indebtedness. Fourth, in the transaction of business always debit the person with what he owes, and credit a person when he pays his account. When loaning a person money, he becomes a debtor and is so entered in the book, and when he pays his account, he is credited and is so entered in the book.

ARRANGING ENTRIES IN DAY-BOOK FOR POSTING.

Debit and Credit Rule for Personal Accounts. Debit the person when they owe you, or you pay them an account. Credit the person when you owe them, or they pay you an account.

Buying and Selling on Account.—If you sell on account, debit the person and describe the property sold. If you buy on account, credit the person from whom you purchase.

Cash or Note.—If you buy or sell for cash, make no Day Book entry, but enter the Cash in the Cash Book; if for note, enter in the Bill Book.

Cash in Part Payment.—If you sell property and receive cash in part payment, debit the person for the full amount sold, and credit him for the cash received, and enter the cash in the Cash Book on the Dr. side. If you buy property and pay part cash, credit the person for the full amount and debit him for the cash paid, and enter the cash in the Cash Book on the credit side.

Note in Part Payment.—If you buy property and give your note in part payment, credit the person for the full amount, debit him for the note and enter the note in the Bills Payable Book. If you sell property and receive in part payment a note, debit the person for the full amount sold, and give him credit for the note, and enter it in the Bills Receivable Book.

Cash on Account.—If you receive cash of a person on account, give him credit and enter the cash in the Cash Book, on the Dr. side; or if you pay cash on account, debit the person and enter on the Cr. side of the Cash Book.

Bank Account.—An account with a bank is considered a personal account. Debit the Bank with the amount you deposit, and credit the Bank when you give a check upon it. An excess of debit will show balance on deposit; an excess of credit will show amount overdrawn.

Drawing a Draft.—The drawer of a draft should credit the drawee when he draws a draft upon him. The drawee of a draft should debit the drawer when the draft is paid on presentation or accepted for future payment.

Cash Entries.—Cash invested in the business, and all cash and checks received, should be entered on the debit side of the Cash Book, and all cash paid out on the credit side.

Balance on Hand.—The difference between the debit and the credit side of the Cash Book should equal the balance on hand, as shown by actual count of money on hand. There can never be an excess on the credit side of the Cash Book without error, as we can never pay more than is secured. The Cash Book is closed by entering on the credit side in red ink the excess of the greater with the remark "Balance on Hand." Single rule both debit and credit columns, directly opposite, foot the columns and double rule, then bring the red ink entry below in black ink on the debit side, as a balance on hand with which to start the next day.

The Sales Book contains a record of all the sales of merchandise and may be used as a principal book from which to post personal accounts to the Ledger, instead of entering the same transactions in the Day Book.

An Invoice Book should contain a record of all merchandise received, which is usually done by posting all the invoice in a blank invoice book and indexing them for reference. The transactions on account may be posted directly from this book to the Ledger, the same as the transactions in the Sales Book. Some however prefer to enter them in the Day Book before posting.

The Sales Book, Invoice Book, Bill Books, and Cash Book are the same in Double as in Single Entry.

DOUBLE ENTRY BOOK-KEEPING.

Double Entry Book-keeping is the process of recording business transactions, so that each entry shall have a debit and a credit of equal amounts. Accounts are kept with both persons and things.

The Principal Books are, the Day Book, Cash Book, Journal, and Ledger.

The Day Book is the book in which the entries are first recorded, with the date and in the order of their occurrence. It should give a complete history of the transactions.

The Journal is the book in which entries to be made in the Ledger are arranged.

The Ledger is the book of accounts.

Rules for Opening a Stock Set of Books.—Debit the resources and credit the liabilities, then debit or credit stock for the difference. If the resources be larger, credit the stock. If the liabilities be larger, debit the stock. The proprietor's name may be used instead of stock.

At Commencing, a credit of stock shows the investment, and a debit insolvency; after the books have been opened, the credit stock shows additional investment or gain, and the debit amount withdrawn or loss.

When Two or More Persons are doing business as partners, we do not use the stock account, but open a separate account with each of the partners, using their individual names.

A Partnership Set is opened the same as a stock set, only that you credit or debit each partner instead of stock.

The Debit Side of a partner's account contains debts assumed, capital withdrawn, and final losses, the same as the debit side of the stock account.

The Credit Side of a partner's account contains all investments, whether original or subsequent, and final gains, the same as the credit side of the Stock account.

In a Partnership Business the Loss and Gain account is closed to the Partner's account, each name mentioned in Loss and Gain, dividing the gain as per agreement.

Rule for Journalizing.—Debit what you receive, and credit what you part with; or debit what costs value, and credit what produces value.

The Debit and Credit of the Journal should be equal. The Journal should be footed at the bottom of the page.

THIS SET IS WRITTEN UP, SO EVERY ONE CAN STUDY THE FORMS OF ENTRY FOR EVERY ITEM.

TRANSACTIONS IN SINGLE ENTRY

Written Up.

Jan. 1, 1894.—J. L. Nichols and F. A. Lueben have engaged in a General Merchandise business. J. L. Nichols invests Cash, $4000; Merchandise, $1750; Notes as follows: One in favor of J. L. N., signed by D. B. King, and endorsed by A. L. Willard, dated Dec. 1, 1893, at 60 days, for $500; and one for $700, an accepted Draft, drawn by L. S. Bliss on H. B. Hamilton, Dec. 11, 1893, at 90 days' sight, and accepted Dec. 13, '93. Personal Accounts, as follows: Jacob Jones, $500; Albert Lee, $750; Arthur Cromwell, $900. F. A. Lueben invests, Cash, $500; Real Estate, $5000.

2.—Sold John Smith, on ⁄c, 2 doz. Gents' Silk Handkerchiefs, 24. at 40¢; 6 pcs. Amoskeag Sheeting, 130 yds., at 10¢; 4 do. Mixed Cassimeres, 100 yds., at 50¢.— Received Cash of Jacob Jones in full of ⁄c, $500. — Paid Cash for Stationery and Printing, $30.

STATEMENT.

THE results of the foregoing record will be found condensed and classified in the Statement which follows. A Statement showing the condition of a business must of necessity exhibit its property and debts, or, as usually expressed, its resources and liabilities. The sources from which these facts are obtained in the present instance, so far as the record goes, are the Ledger, the Cash Book, and the Bill Book. The Ledger gives the debts due to and from the concern, the Cash Book gives the amount of Cash in possession, and the Bill Book gives the Notes and Bills Receivable and Payable. The value of unsold goods has to be obtained from actual inventory and appraisement, as is the case in any system of Bookkeeping.

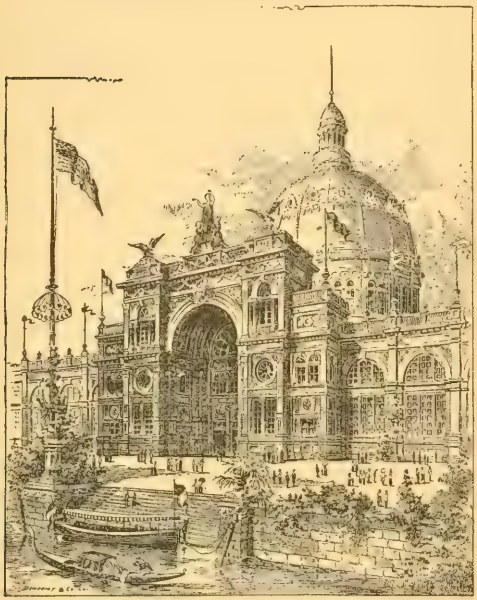
HOW TO WRITE ALL KINDS OF NOTES.



1. **THERE IS NO EXCUSE** for any one not to be able to write a Note or fill out a printed form. Everybody should be familiar with the common form. It takes but little study and little practice to attain that accomplishment to be able to write a note correctly. It is one of the most common and simple business papers.

2. **FORMS.**—In the copies which follow there are all the different kinds of forms used in business; also all the different forms of Indorsements, and further on in this work will be found the law explaining all the different forms of business papers arranged for ready reference.

COMMON FORM OF NOTE.

Form 1.

$ 125 25 Mt. Vernon, Ia., March 26, 1895.

Ten Months after date I promise to pay to the order of Edward Fulton

One Hundred Twenty-Five and 25/100 DOLLARS,

at Seven per cent Interest from date

Value Received.

No. Due H. Doane

The above Note is a form commonly used in almost all business transactions where an ordinary form is required. Most all printed forms are similar to this.

A NOTE BY A PERSON WHO CANNOT WRITE.

Form 2.

$ 100. Lamont, Ills., Nov 15, 1895.

Two Years after date I promise to pay to the order of Samuel Nicholson

One Hundred and no/100 DOLLARS,

at Lamont, with interest at Seven per cent.

Value Received.

his
Darling × Thompson.
mark.

Witness, Isaac Clark.

The above Note is given by a person who cannot write. All that is necessary is for Mr. Thompson to make the "mark" or simply touch the pen while the mark is being made, and it becomes a legal Note and has as much force as though he had been able to write his name himself. It must, however, be witnessed and the name of the witness written at the left, as in the above copy.

ON DEMAND.

Form 3.

$ 500.00 Erie, Pa., March 1st, 1895.

On demand I promise to pay to the order of Hasson Tinker

Five Hundred 00/100 Dollars,

at Seven per cent. interest from date.

Value Received.

Isaac Williams.

No. Due

This Note answers the same purpose as a Note written One day after date, and is payable whenever presented, if on the very same day it was given.

Form 4.

$482.00. Naperville, Ills., July 10, 1894.

Nine months after date, I promise to pay to James F. Clarke, or order, Four Hundred and Eighty-Two Dollars, with interest at six per cent. per annum. Value received.

Josiah Nottingham, Jr.

PAYABLE AT BANK.

Form 5.

$245.60. St. Paul, Minn., August 20, 1894.

One Year from date, I promise to pay James K. Polk Crawford, or order, Two Hundred Forty-five Dollars and Sixty Cents, at the Mechanics' National Bank, with seven per cent. interest. Value received.

Samuel Kinsman.

JOINT AND SEVERAL NOTE.

Form 6.

$800.00. Natchez, Tenn., Oct. 23, 1894.

Six months after date, for value received, we, or either of us, promise to pay May E. Kingsbury Eight Hundred (800) Dollars, with interest at seven (7) per cent. per annum.

David Jamieson.
Michael Whitehead.

JUDGMENT NOTE.

Form 7.

$200. Jamestown, N. D., March 5, 1890.

One Year after date, for value received, I promise to pay to the order of Thomas O'Rourke

Two Hundred and no/100 DOLLARS,

at the Jamestown Bank, with interest at 8 per cent. per annum after date ——— until paid.

And to secure the payment of said amount I hereby authorize, irrevocably, any attorney of any Court of Record to appear for me in such Court, in Term time or vacation, at any time hereafter, and confess a judgment without process in favor of the holder of this Note, for such amount as may appear to be unpaid thereon, together with costs, and 20.00 Dollars attorney's fees, and to waive and release all errors which may intervene in any such proceedings, and consent to immediate execution upon such judgment, hereby ratifying and confirming all that his said attorney may do by virtue hereof.

Thomas Campbell

No. _____

This is a Judgment Note. In order to collect this Note it is not necessary to sue it, as Judgment and Attorney's fees are provided for. It is the strongest form of Note now in use, and is mostly used by banks and money loaners.

A CORPORATION NOTE.

Form 8.

$222.00 Jacksonville, Fla., May 10, 1895.

Two Months after date We promise to pay to the order of William Zimmerman

Two Hundred Twenty-Two and no/100 Dollars,

at Seven per cent interest.

Value Received. American Brick Co.

No. _____

Due _____

Daniel Flushush, Sec. Nelson Davis, Pres.

The Note of a Corporation or Company should always be signed by the Corporation or Company name first, and then by the President and Secretary. By this means the officers individually will avoid personal responsibility. They will only be held as officers of the Company and not as individuals. Great care should be used in making one of the above Notes.

JOINT NOTE.

Form 9.

$500. Waring, Kas., June 5, 1895.

One day after date We promise to pay to the order of David Davis

Five Hundred and no 100 Dollars,

at seven per cent. interest per annum.

Value Received.

Daniel Kearns.

No. P. D. Hutchinson.

If the above Note had been written *We or either of us* promise to pay David Davis etc., then one or both could be sued for payment; but as it is written "We", both must be sued jointly in case a forced collection should be necessary.

COLLATERAL NOTE.

Form 10.

$1000.00. Mendota, Ills., Sept. 25, 1895.

Sixty days after date, I promise to pay to the order of Isaac Mackintosh, One Thousand Dollars, with interest at Seven per cent. Value received.

Having deposited a Note and Mortgage of the nominal value of Two Thousand Dollars, which I authorize the holder of this Note, upon the non-performance of this promise at maturity, to sell, either at public or private sale, without demanding payment of this Note or debt due thereon, and without further notice, and apply the proceeds, or as much thereof as may be necessary, to the payment of this Note, and all necessary expenses or charges, holding *myself* responsible for any deficiency.

Harmon Knowles.

This Collateral Note is a note of very strong conditions. It is used where a person demands some other security than personal security, and as in the above case, the Mortgage and Note are assigned, and they can be sold in case the claims of the Note are not met.

A Collateral Note may represent a note, or mortgage, or bonds, or several notes without mortgage, or most any paper can be put up as collateral security.

HOW TO WRITE AND FILL OUT

ALL KINDS OF

Checks and Drafts.

Form 1.

NAPERVILLE, ILL., June 15, 1895. No. 26.

The First National Bank

OF NAPERVILLE,

PAY TO THE ORDER OF

Nellie Whitaker $ 11.00

Sixteen and no 100 DOLLARS.

Frank Everett.

A common Check, such as is used by almost all Banks. Must be indorsed—party identified before payment.

Form 2.

Southern Natural Gas and Oil Company,

No. 56. Vincetown, N. J., March 15, 1895.

United Security Life Insurance and Trust Company

of Pennsylvania, 603 & 605 Chestnut St.,

Pay to the order of A. O. Everett, or Bearer,

Sixty-Three and 50/100 Dollars.

$ 63.50 Pres. Elbert Wicks, Treas.

A Company's Check, payable to order or bearer. Must be indorsed by A. O. Everett when paid, yet identification is not necessary.

Form 3.

Naperville, Ill., Feb. 16, 1895. No. 13.

WILLARD SCOTT & CO., BANKERS,

ESTABLISHED 1854.

PAY TO THE ORDER OF

Myself $ 25.00

Twenty-Five and no/100 Dollars.

Horace Jordan.

This Check is the common form and does not require indorsement. It is drawn by Mr. Jordan himself for the purpose of drawing money out of the Bank for his own use.

Form 4.

Milwaukee, June 18th, 1895. No. 28.

Wisconsin Marine & Fire Ins. Co. Bank,

Pay to Wallace Howard or order $ 65.00

Sixty-Five and no/100 Dollars

(In full of all demands to date)

Frank Fuller.

This Check is not only a payment of $65.00, but it also represents a settlement for all demands. The words are placed on the lower left hand corner, and are a receipt for full payment and settlement of account. — This is a very good way to record a settlement or give the purpose of check. — The next form (5) is payable to Mr. Hitchcock or "bearer".

Form 5.

$ 16.50 Freedom, Pa., March 30, 1895.

Franklin National Bank,

Pay to Adam Hitchcock or bearer

Sixteen and 50/100 Dollars.

No. 30. Frank Fuller

Form 6.

The First National Bank, No. 38.

DUPLICATE UNPAID.

McGregor, Iowa, Feb. 28, 1895.

Pay to the order of Milton Everett $ 161.30

One Hundred and Sixty-One and 30/100 Dollars.

To Importers' & Traders' National Bank, New York City. W. W. Walsworth.

The above Draft is the common form and has been received by Milton Everett. He can present the same at the Bank and receive the money, by being identified as Milton Everett and indorsing the Draft on the back by signing his name.

Form 7.

$ 130.25 Rochester, N. Y., March 26, 1895.

At Sight Pay to the order of William Aldrich

One Hundred and Thirty and 25/100 Dollars,

Value received, and charge the same to account of

To Dwight Perry, No. 22. Branson, Kans. Theodore Saunders.

This is a Sight Draft, and is used where one person, as the above Theodore Saunders, draws on Dwight Perry for $130.25, to be paid to William Aldrich.

Now Mr. Saunders must have some right or claim upon Dwight Perry before drawing the Draft and sending it to William Aldrich. A Sight Draft is simply a demand for payment of a certain sum of money.

Form 8.

$ 1830.00 Toronto, Ont., May 6, 1895.

At Thirty days sight Pay to the order of Franklin Clark

Eighteen Hundred Thirty and no/100 Dollars,

Value received, and charge the same to account of

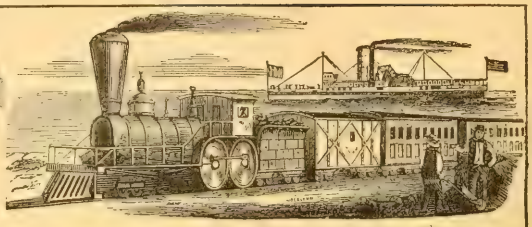
To Newton Cannon, No. 13. Meriden, Ills. William Lowden.

This is a Time Draft and payable in thirty days from date of acceptance. It is not in so general a use as the Sight Draft, as it represents a time payment without any provision for interest. They are, however, generally received at a discount.

Form 9.

CERTIFICATE OF DEPOSIT.

German American Bank
OF
WINONA, MINN.



June 5th, 1895. No. 20

A. A. Fuller has deposited in this Bank
Fourteen Hundred and no 100 Dollars, $1400.00
payable in current funds to his order six months after date
on the return of this Certificate properly endorsed,
with interest at the rate of four per cent. per annum
till due. INTEREST TO CEASE AFTER TWELVE MONTHS.

Samuel Haight,
Cashier.

This is a Certificate of Deposit used by Banks to accommodate those who desire to use the Bank as temporary security for money or for interest, as the case may be. Where a Certificate of Deposit is given, the holder cannot draw the amount out by issuing Checks, bnt the Certificate itself has to be presented for indorsement.

Form 10.

The German American Bank, No. 2263.

MADISON, WIS., March 26, 1895.

Pay this First of Exchange (Second unpaid) to the order of
Leonard Ice $306.55
Three Hundred Six and 55/100 Dollars,
IN CURRENT FUNDS.

To NATIONAL BANK OF ILLINOIS,
CHICAGO, ILL.

David Tripp,
Cashier.

This is a Bank Draft issued by one Bank upon another. These Drafts are used for sending money to some party at a distance. They are bought at the Bank, inclosed in a letter and sent to destination by mail. It is always best, however, to have the draft made out in your name and indorse it in favor of the person to be sent to, before sending it. It is the safest way.

RECEIPT FOR SETTLEMENT OF AN ACCOUNT.

Port Byron, Ill., April 8, 1895.

Received of Alvin P. Williamson

Three Hundred and no/100 Dollars,

in settlement of account to date

$300.00 F. B. Drager.

The above form of Receipt is used to represent a settlement, and whenever a settlement is made, it should always be specified on a receipt.

RECEIPT IN FULL OF ALL DEMANDS.

Toledo, Iowa, Feb. 20, 1895.

Received of Isaac P. Andrews,

Two Thousand and no/100 Dollars,

in full of all demands to date.

$2000.00 Jacob B. Fuller

This Receipt is similar to the first one and does not represent a long account, but simply a single transaction.

RECEIPT FOR RENT.

Denison, Texas, March 16, 1895.

Received of William F. Schultz,

Thirty-Five and no/100 Dollars,

in full for one month's rent of residence at 23 Dexter Street.

$35.00 John M. Zimmerman.

RECEIPT FOR A NOTE.

Knowles, Wis., May 3, 1895.

Received of Williams & Butler, their Note of this date, at six months, for Ninety and no 100 Dollars, in my favor; which, when paid, will be in full of account rendered to 1st inst.

$90.00 Fred W. Kraemer.

RECEIPT FOR PERSONAL SERVICE.

$64 00 Horicon, Wis., March 10, 1895

Received of John M. Martins, Sixty-Four and no 100 Dollars, in full for services to date.

Arthur G. Goodrich.

RECEIPT FOR BORROWED MONEY.

Borrowed and Received of Nicholas E. Harter, Eighty-Three and no 100 Dollars, which I promise to pay on demand, with interest at the rate of 6 %.

Winchester, Kas., June 8, 1895.

$83.00 Anton R. Bloom.

While this is a Receipt in form it is a Note in fact, and is one of the best papers to have a party sign when they borrow money for a short time. It not only makes a memorandum of the transaction, but it makes a legal and negotiable paper and will hold the party responsible for the amount borrowed with legal interest.

RECEIPT FOR PROPERTY.

Marshall, Minn., Aug. 10, 1895.

Received of F. Hood, the following articles, to be held in trust for him, and returned on his demand: One Gold Watch, and one Promissory Note dated May 20, 1895, signed by Henry Albert, and due six months from date.

James L. Thomas.

RECEIPT FOR PAYMENT BY THE HAND OF A THIRD PARTY.

St. Louis, Mo., June 6, 1895.

Received of Ernest Hoch, by the hand of R. Lee, Six Hundred Fifty and no/100 ——— Dollars, in full for proceeds of Stock sold Nov. 20, 1895.

F. Dudley

This Receipt represents money paid by a third party for another, and it may be for the payment of a Note, or the payment of an Account, or for Rent, or for proceeds of a Sale, the same as the above form. It is a very simple document, and no money should be paid by a third party without demanding this form of receipt for their own protection.

RECEIPT FOR PARTIAL PAYMENT OF AN ACCOUNT.

$30.00 New Haven, Ind., Aug. 4, 1895.

Received of Mr. Peter Sanderson, Thirty Dollars, to apply on his account.

James Newton.

RECEIPT FOR THE PURCHASE OF A HORSE.

Stanton, Neb., Oct. 1, 1895.

Received of A. N. Fellow,

One Hundred, Sixty-Six and no 100 ——— Dollars

for a Bay Mare, warranted only five years old, free from vice; and quiet to ride and drive.

$166.00

N. M. Madison.

He who buys horses will find many times the value of this book in this receipt. This receipt holds the seller responsible to the conditions of the receipt, and when a horse is purchased from a responsible party, the value of this receipt will become self-evident. Never purchase a good horse without demanding this form of receipt, which not only is a receipt, but also a warrant that the horse is what he is represented to be.

RECEIPT FOR A LOST OR DESTROYED NOTE.

Fox Lake, Wis., Sept. 23, 1895.

Received of Geo. B. Reichert, Five Hundred and no 100 Dollars, in full payment for a certain Note of hand, given by said Geo. B. Reichert, dated Sept. 20, 1894, calling for Five Hundred Dollars; which said Note is lost, destroyed or mislaid, and this receipt is a guarantee against future demands on account of said Note.

$500.00

N. A. Fleming.

The above Receipt is a very practical kind of paper to be used in case a Note is lost or destroyed by fire. But great care should be taken in the payment of a Note which has been destroyed. If the party who owned the Note and lost it is responsible, it is all right to pay the Note by receiving the above Receipt. But if the party who lost the Note is irresponsible, then he should be made to give security, in case the Note should turn up in the hands of some other party.

ORDER PAYABLE IN CASH.

$35.00 Dawson, N. D., Dec. 20, 1895.

Messrs W. J Miller & Co will please pay to E. N. Kiefer, or bearer, Thirty-five Dollars in Cash, and charge the same to my account

August Belan

ORDER FOR GOODS.

Des Moines, Ia., Jan'y 23, 1895.

Mr. W. B. Krueger:

Please send me, per bearer, two barrels of Salt, and oblige, Yours very truly,

Paul Beacham.

ORDER FOR GOODS TO COLLECT ON DELIVERY.

Weyauwega, Wis., Oct. 2, 1895.

Messrs. J. E. Pennington & Co.,

Please send to my residence, 14 Waupaca ave., One bbl. Minnesota Flour, 10 lbs. Crushed Sugar and 5 lbs. ground Java Coffee, (C. O. D.) and oblige,

Yours Respectfully,

John E. Sanderson

ORDER TO BE PAID IN MERCHANDISE.

$16.00 Towanda, Kans., August 17, 1895.

E. A. Kellogg & Co.

Gentlemen:—Please let bearer, John Hink, have such goods as he may want, to the amount of Sixteen Dollars, and charge the same to me.

Josiah Wadsworth

DUE-BILL PAYABLE IN CASH.

$150.00 Abingdon, Ill., Nov. 13, 1895.

Due Edward Devitt, for value received, One Hundred and Fifty Dollars, with interest.

John C. Koehler.

DUE-BILL PAYABLE IN MERCHANDISE.

$500.00 Germantown, Ohio, July 20, 1895.

Due George E. Stacks, or order, Five Hundred Dollars, payable in Wheat, at market price, on the first day of October next.

Oscar Little

Do You Hear?

Never Sign a Paper For a Stranger.

THE FAMOUS SWINDLING NOTE.

Naperville, Ills., Oct. 4, 1893.

One year after date, I promise to pay Fred. G. Davis or bearer Ten Dollars, when I sell by order Four Hundred and Seventy-Five Dollars ($475.00) worth of Patent Fanning Mills, for Value Received, at Ten per cent. per annum. - - - Said Ten Dollars when due is payable at Naperville, Illinois.

Witness: M. J. Meyer *C. E. Selby,* Agent for Fred. G. Davis.

1. Although the above scheme of the confidence man has been exposed time and time again, yet it still continues to add yearly to its list of victims. A paper is drawn up wherein a farmer agrees to pay ten or twenty dollars when he has sold goods to a given amount. By tearing off the right-hand end of this paper, what is apparently an agreement for a small amount becomes a Promissory Note for a considerable sum. This Note is sold at a Bank, thereby becoming the property of a third and innocent party, and the signer of the agreement is called upon to pay the Note.

2. **NEVER SIGN A PAPER** without carefully reading and examining the same. It is dangerous to sign a paper for an unidentified stranger.

THE LIGHTNING-ROD SWINDLE.

A Good Lightning Rod Properly Applied is the Cheapest and Best Insurance Known.

CONTRACT.

Naperville, Ills., Aug. 2, 1894.

Mr. F. J. Bechfeld, please erect at your earliest convenience your Lightning Rods on my House, according to your rules, of which said House I am the owner, for which I agree to pay you ..... cents per foot and $3.00 for each point, $4.00 each for vanes, $5.00 each for arrows, $1.50 each for balls, and $2.00 for braces, cash when completed, or a note due on the first day of February next, 1895.

F. Hausmann

1. In the blank for cents....., the canvasser or agent puts in some single figure, say 7, that being understood to be the regular price per foot; but after the contract is signed, the agent at his leisure quietly inserts a 6 before the 7, or some other figure, making the amount 67 cents per foot, instead of 7 cents as signed and agreed upon.
2. A swindling note is generally obtained, and the contract kept in the background; but when the collector comes along and presents the note backed by the contract in plain figures, the farmer sees that he *himself has been struck by lightning* while trying to protect his house.
3. The note is generally in the hands of an innocent party, and according to law may be collected.
4. The agent canvassing the victim generally promises that the rodding of the house shall not cost over $28.00 or $35.00. But that man, however, never appears on the scene again.
5. Never deal with irresponsible persons. If you desire rods, employ your hardware merchants; or if you desire anything in the machinery line, patronize honest and trusted dealers, and take no chances of "being taken in."

HOW TO MAKE ALL KINDS OF INDORSEMENTS,

SAME AS USED IN ACTUAL BUSINESS.

BLANK INDORSEMENT.

Leonard Furbush

This is a blank indorsement of the Note Form 1. (*See Notes.*) This form of indorsement holds the indorser responsible for the payment of the Note and it is the common way of indorsing commercial paper when it is transferred, unless other forms are specified and agreed upon.

INDORSEMENT IN FULL.

Pay to the order of J. J. Pool.

Leonard Furbush

This form of indorsement is what is called an Indorsement in Full, and is Form 1, indorsed in favor of J. J. Pool, who now becomes the specified owner of the Note, and if not paid by the maker he can call upon Furbush to pay the Note. The liability is the same as in blank indorsement.

INDORSEMENT WITHOUT RESPONSIBILITY.

Without Recourse.
Harrison Trinkner.

This in law is called a *Qualified Indorsement*, and releases the indorser from all responsibility. If Isaac Williams, Form 3 (*see Notes*), fails to pay the Note, no action can be brought against Harrison Trinkner. This form of indorsement is always a matter of agreement between the contracting parties, and the common form is always used, if nothing is said to the contrary when a Note or other negotiable paper is purchased or transferred.

INDORSEMENT BY AN AGENT.

J. L. Nichols,
by J. A. Hertel, his agent.

This indorsement is only legal in case J. A. Hertel has a Power of Attorney from J. L. Nichols, fully authorizing him to make indorsements on Notes, etc. A Power of Attorney must be broad enough in its scope of authority to cover the transfer of negotiable paper, or such transfer would not be legal. Great care and caution is necessary in accepting paper indorsed by an agent.

A RESTRICTIVE INDORSEMENT.

Pay to J. Peterson or Order
John Brearley.

This form is rarely used, as it ties up the paper, and rarely a condition of business occurs that warrants the use of the above form of indorsement.

MONEY INDORSEMENTS.

Received on within Note,
Jan. 15, 1895,
Forty Dollars ($40.00)
April 25, 1895,
One Hundred Dollars,
($100.00)
Dec. 6, 1896,
One Hundred Forty
Dollars ($140.00)

Money indorsements should be made in the presence of the party paying the money. It is best always to take a receipt for money paid on a Note. It is the only safe way.

A TRANSFER OF NOTE WITH INDORSEMENTS.

Received on within Note,
June 6, 1894,
Forty Dollars ($40.00)
July 5, 95,
Eighty Dollars ($80.00)
Pay to the order of
Andrew Jay.
John Hoffman.

The title of the above Note passes from John Hoffman to Andrew Jay. The balance due on Note must be paid to Andrew Jay, providing the Note was not due when transferred. If Notes are transferred after maturity the debtor on Note can refuse to pay the new holder of Note, but the original owner John Hoffman can collect Note if he again secures possession of it.

GUARANTY OF PAYMENT.

For Value received in
Cash I hereby guaran-
tee the payment of the
within Note.
James D. Philip.

This form of indorsement holds the indorser responsible, if he is properly notified when the Note becomes due. In Illinois and some other States notice of non-payment is not necessary, but it is always best to notify indorsers of non-payment as soon as demand is made. All guaranties must be in writing and specify value received.

HOW TO WRITE ALL THE DIFFERENT FORMS OF BILLS.

Sidney, Cheyenne Co., Neb., March 10, 1895.

Mr. Denis Pyne,

Denver, Colo.

BOUGHT OF CHARLES A. MOORE,

DEALER IN

DRY GOODS, GROCERIES, CLOTHING,

HOW TO WRITE ALL KINDS OF LEASES.

A LEASE FOR RENTING A HOUSE.

This is to Certify, That I have this Sixth day of September, 1894, let and rented unto Andrew Jay my house and premises, Number 142 on Archer Street, in the town of Livermore, and State of Iowa, with the sole and uninterrupted use and occupation thereof for one year; to commence the first day of May next, at the monthly rent of Twenty Dollars, payable in advance.

Witness my hand and seal.

Henry R. Rilling. (Seal.)

SHORT FORM OF LEASE.

Rufus Parks leases to Harry Phillips, Arlington, Illinois, house and lot on Spring Street, on payment of ten dollars monthly.

Dated this 1st day of February, 1895.

Rufus Parks.

This Indenture, Made this First day of January 1895, BETWEEN James D. Tuling, of Waring, Ness County, and State of Kansas, party of the first part, and Irving Goodrich, of same place, party of the second part, *WITNESSETH:* That the said party of the first part, in consideration of the covenants of the said party of the second part, hereinafter set forth, does by these presents lease to the said party of the second part the following described property, to wit:

The North West Quarter (N. W. ¼) of Section Twenty Nine (29), Township Twenty Five (25) South, Range Nine (9) East of the third Principal Meridian, containing One Hundred and Sixty (160) Acres, more or less. Also Lots Six and Seven in Block Four in the original Town of Waring, County of Ness and State of Kansas.

TO HAVE AND TO HOLD the same to the said party of the second part, from the First day of March 1895, to the First day of March 1896.

And the said party of the second part, in consideration of the leasing of the premises as above set forth, covenants and agrees with the party of the first part to pay the said party of the first part, as rent for the same, the sum of Three Hundred and Twenty (320) Dollars, payable as follows, to wit: One Hundred Dollars the First day of September 1895; One Hundred Dollars the First day of January 1896, and the balance, One Hundred and Twenty Dollars, the First day of March 1896.

The said party of the second part further covenants with the said party of the first part, that at the expiration of the time mentioned in this Lease, peaceable possession of the said premises shall be given to said party of the first part, in as good condition as they now are, the usual wear, inevitable accidents and loss by fire excepted; and that, upon the non-payment of the whole or any portion of the said rent at the time when the same is above promised to be paid, the said party of the first part may, at his election, either distrain for said rent due, or declare this Lease at an end, and recover possession as if the same was held by forcible detainer; the said party of the second part hereby waiving any notice of such election, or any demand for the possession of said premises.

AND IT IS FURTHER COVENANTED AND AGREED, Between the parties aforesaid, that the said Goodrich will haul all the manure, keep down all thistles and burs, or other noxious weeds, and farm the land in good, workmanlike manner. The said Goodrich further agrees to make all necessary improvements about the premises, keep up the fences, etc., the said Tuling to furnish the material in the town of Waring.

The covenants herein shall extend to and be binding upon the heirs, executors and administrators of the parties to this Lease.

Witness the hands and seals of the parties aforesaid.

James D. Tuling. {SEAL}
Irving Goodrich. {SEAL}

A LEASE FOR SHARE RENT.

This Indenture, Made and entered into this *Twenty-fifth* day of *March*, A. D. 18*95*, BETWEEN *J. Hormell, of Meriden, De Witt Co., Illinois*, of the first part, and *Frederick Binder, of Earlville, Illinois*, of the second part,

Witnesseth: That the party of the first part has this day **DEMISED, LEASED AND TO FARM LET,** and by these presents hath **DEMISED, LEASED AND TO FARM LET,** to the party of the second part, all the following described land, to-wit:

The North-West Quarter (N. W. ¼) of Section 29, Township 30, East of the Third Principal Meridian.

To Have and to Hold the same from the *First* day of *November*, A. D. 18*95*, to the party of the second part for and during the term of *Two Years* from said date; And the party of the second part covenants with the party of the first part, to pay him as rent for said premises *One-Half* part of all the Corn, Wheat, Oats, Barley, Rye, Potatoes, and all and every kind of grain or produce raised upon said land; *One-Half* part of the wild Hay, *One-Half* part of the tame Hay raised or grown upon the said premises. And the said party of the second part covenants with the party of the first part, to *farm the land in good, workmanlike manner, keep down all burs, thistles, or other noxious weeds, haul out the manure, keep fences in good repair, and make other necessary improvements about the premises, the said Hormell to furnish the material at Meriden.*

The party of the second part covenants to deliver the rent as aforementioned to the party of the first part, or *his* agent, at *Meriden, Illinois*; the Corn to be delivered in the ear between the fifteenth day of November, 18*96*, and the twenty-fifth day of December, 18*96*, and the small grain to be delivered at the same place during the Fall of the year 18*96*, in good merchantable order; the Hay of all kinds to be divided in the stacks on the premises on demand of the party of the first part, or his agent, or if desired by *said Hormell, he shall deliver all hay at Meriden, and have three months after cutting same to make delivery.*

The said party of the second part hereby covenants and agrees, that he will deliver the share of the Corn as stated above to be paid to the said first party, before any other share, part or portion of the said crop shall have been gathered; and also, to divide the said crop of Corn by the rows standing in the field, in a just, fair and equitable manner.

The party of the second part further covenants to pay, on the *First* day of *March* 18*96*, the sum of *Fifty (50)* Dollars to the party of the first part, as rent for the use of *Pasture.* The party of the second part also covenants, to properly cultivate and care for the hedges, trees and shrubbery of all kinds that may be now on, or hereafter be put upon said premises; to keep the ditches cleared out and free from obstructions, and destroy the weeds along line of ditches during month of June; to haul and spread all the manure that may accumulate upon said premises, and to destroy all kinds of burs that may be upon the premises before they form seeds or are stricken by frosts, during the term of this Lease.

The said Binder further agrees to permit all plowing or other work to be done on said farm during the Fall of the last year of his Lease by said Hormell or his agent.

In Witness Whereof, We have hereunto set our hands and seals, the day and year first above written.

A MORTGAGE ON PERSONAL PROPERTY.

CHATTEL MORTGAGE.

Know All Men by These Presents, That *T. H. Barnard,* of the *Town of Ottawa,* in the County of *La Salle,* and State of *Illinois,* in consideration of *Seven Hundred* Dollars, to *him* paid by *George Henry Raynor,* of the County of *La Salle,* and State of *Illinois,* the receipt whereof is hereby acknowledged, *does* hereby grant, bargain, and sell unto the said *Geo. H. Raynor,* and to *his* heirs and assigns forever, the following goods and chattels, to wit:

One Pitts' Thrashing Machine; One Romeo Steam Engine; Two Bay Mares, six years old; Four Pair of Double Harnesses; Five White Chester Hogs (black and white); One Bay Golding, seven years old; One black and white Cow, four years old.

TO HAVE AND TO HOLD all and singular the goods and chattels unto the said Mortgagee herein, and *his* heirs and assigns, to their sole use and behoof forever. And the Mortgagor herein, for *him* and for *his* heirs, executors and administrators, *does* hereby covenant to and with the said Mortgagee and *his* heirs and assigns, that the said Mortgagor *being* lawfully possessed of the said goods and chattels as of *his* own property; that the same are free from all incumbrances, and that *he* will warrant and defend the same to *him* the said Mortgagee, and *his* heirs and assigns, against the lawful claims and demands of all persons.

PROVIDED, nevertheless, that if the said Mortgagor shall *pay a certain promissory note of Seven Hundred Dollars, bearing even date with the above, given for One Year, at Eight per cent. interest,*

then this mortgage to be void, otherwise to remain in full force and effect.

AND PROVIDED FURTHER, that until default be made by the said Mortgagor in the performance of the condition aforesaid, it shall and may be lawful for *him* to retain the possession of the said goods and chattels, and to use and enjoy the same; but if the same, or any part thereof, shall be attached or claimed by any other person or persons, at any time before payment, or the said Mortgagor, or any person or persons whatever, upon any pretense, shall attempt to carry off, conceal, make way with, sell or in any manner dispose of the same, or any part thereof, without the authority and permission of the said Mortgagee, or *his* heirs, executors, administrators or assigns, in writing expressed, then it shall and may be lawful for the said Mortgagee, with or without assistance, or *his* agent or attorney, or heirs, executors or administrators, to take possession of said goods and chattels, by entering upon any premises wherever the same may be, whether in this County or State or elsewhere, to and for the use of said Mortgagee, *his* heirs and assigns. And if the moneys hereby secured, or the matters to be done or performed as above specified, are not duly paid, done or performed at the time and according to the conditions above set forth, then the said Mortgagee, or *his* attorney or agent, or *his* heirs, executors, administrators or assigns, may, by virtue hereof, and without any suit or process, immediately enter and take possession of said goods and chattels, and sell and dispose of the same at public or private sale, and after satisfying the amount due, and all expenses, the surplus, if any remain, shall be paid over to said Mortgagor, or *his* heirs and assigns. The exhibition of this Mortgage shall be sufficient proof that any person claiming to act for the Mortgagee is duly made, constituted and appointed agent and attorney to do whatever is above authorized.

In Witness Whereof, the said Mortgagor has hereunto set *his* hand and seal, this *Eighteenth* day of *January,* in the year of our Lord One Thousand Eight Hundred and *Ninety-Five.*

Signed, Sealed and Delivered in Presence of
Henry Brooks.

REAL ESTATE MORTGAGE.

The Mortgagor, Tobias J. Kroehler, and Hattie, his wife, of the Town of Mound Prairie, in the County of Houston, and State of Minnesota, MORTGAGES and WARRANTS to A. A. Milthouse, of the City of La Crosse, County of La Crosse, State of Wisconsin, to secure the payment of a Promissory Note, bearing even date herewith, for the sum of One Thousand Five Hundred Dollars, payable to the order of said A. A. Milthouse, with interest at the rate of seven (7) per cent. per annum, payable annually, the following described Real Estate:

The South-West Quarter (S. W. 1/4) of Section number Thirty-One (31) in Township number Twenty-Five (25) South, of Range number Twelve (12) West, of the Sixth Principal Meridian.

Also: Lot number One (1) in Block number Five (5) of the Town of Mound Prairie, ...

situated in the County of Houston, in the State of Minnesota, hereby releasing and waiving all rights under and by virtue of the Homestead Exemption laws of this State.

DATED this Twentieth day of January, A. D. 1895.

This Indenture WITNESSETH, That the Mortgagor, F. R. Reik, and Fanny E. Reik, his wife, of the Town of Naperville, in the County of Du Page and State of Illinois, Mortgage and Warrant to C. E. Noyes, of the City of La Crosse, County of La Crosse and State of Wisconsin, to secure the payment of a certain promissory note executed by F. R. R[illegible] bearing even date herewith, payable to the order of said C. E. Noyes, for the sum of Eight Hundred Dollars, payable four years from the date hereof, with interest at the rate of seven (7) per cent per annum, payable annually, the following described real estate, to wit: - - - The South East quarter (S. E. ¼) of Section Twenty-five (25) in Township Number Forty (40) North, of Range number Fifteen (15) East, of Fourth Principal Meridian. - - - Also: Lots Twenty (20) and Two (2) in Block number [illegible] of the Original Addition to the Town of Naperville,

situated in the County of Du Page, in the State of Illinois, hereby releasing and waiving all rights under and by virtue of the Homestead Exemption Laws of the State of Illinois, and all rights to retain possession of said premises, after any default in payment or breach of any of the covenants or agreements herein contained.

But it is Expressly Provided and Agreed, That if default be made in the payment of the said Promissory Note, or of any part thereof, or the interest thereon, or any part thereof, at the time and in the manner above specified for the payment thereof, or in case of waste or non-payment of taxes or assessments on said premises, or of a breach of any of the covenants or agreements herein contained, then and in such case the whole of said principal sum and interest, secured by the said Promissory Note in this Mortgage mentioned, shall thereupon, at the option of the said Mortgagee or his heirs, executors, administrators, attorneys or assigns, become immediately due and payable; and this Mortgage may be immediately foreclosed to pay the same by said Mortgagee, or his heirs, executors, administrators, attorneys or assigns; And it shall be lawful for the said Mortgagee, or his heirs, executors, administrators, attorneys or assigns, to enter into and upon the premises hereby granted, or any part thereof, and to receive and collect all rents, issues and profits thereof.

Upon the Filing of any Bill to foreclose this Mortgage in any court having jurisdiction thereof, such court may appoint any Attorney or any proper person Receiver, with power to collect the rents, issues and profits arising out of said premises during the pendency of such foreclosure suit, and until the time to redeem the same from any sale that may be made under any decree foreclosing this Mortgage shall expire; and such rents, issues and profits when collected may be applied toward the payment of the indebtedness and costs herein mentioned and described. And upon the foreclosure and sale of said premises, there shall be first paid out of the proceeds of such sale, all expenses of advertisement, selling and conveying said premises, and Fifty dollars Attorneys' or Solicitors' fees, to be included in the decree, and all moneys advanced for taxes, assessments and other liens; then there shall be paid the principal of said Note, whether due and payable by the terms thereof or not, and the interest thereon.

The said Mortgagor covenants and agrees that he will keep all buildings that may at any time be upon said premises insured in such Companies as the holder of said Note shall direct, for their full insurable value, and make the loss, if any, payable to, and deposit the Policies of Insurance with, the party of the second part, or his assigns, as further security for the indebtedness aforesaid.

DATED, This Third day of March, A. D. 1895.

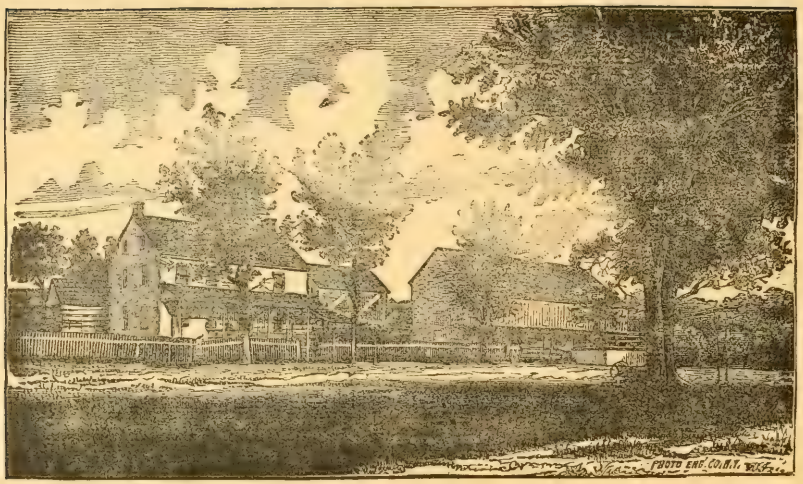
IMPORTANT POINTS ON MORTGAGES.

1. **Chattel Mortgages must be Executed and Acknowledged.**—It should be remembered that chattel mortgages are required in all states to be executed and acknowledged in strict conformity with the statute of those states. Any material deviation from the provisions of the statute rendering the mortgage bad as against creditors and subsequent purchasers without notice. In some states, as in Illinois, chattel mortgages on household goods must be signed and acknowledged by the wife of the mortgagor, and such mortgages can only be foreclosed by a court proceeding.

2. **Notes Secured by Mortgage.**—In some states also, as in Illinois, the notes which are usually secured by the mortgage must show upon their face that they are so secured or they are void, and in some states notes secured by a chattel mortgage are not governed by the same rules which control other negotiable papers, the laws of such states allowing any defense to be made against a note so secured in the hands of a mortgagee which could be made against the note in the hands of the original payee.

3. **Real Estate Mortgages.**—The same strictness is not required in mortgages of real estate, although they should be signed and acknowledged with as great care as deeds, but mistakes made in real estate mortgages do not have so serious consequences as those made in chattel mortgages.

4. **A Criminal Offense.**—It is a criminal offense for a person who has given a chattel mortgage on personal property to sell said property without notice.



A FARM HOME

LAND CONTRACT.

This Agreement, made and entered into at Dunkirk, N. Y., this fifth day of March, 1895, provides as follows:

That in the consideration of the sum of Two Thousand ($2000) Dollars, to be paid as hereinafter specified, John Brown, of the city of Dunkirk, N. Y., agrees to convey, by full Warranty Deed, to Norman C. Stull, of the city of Buffalo, N. Y., the Forty Acre tract of land lying four miles west of the city limits of Dunkirk, and known as the Lewis Shuman Estate.

It is further provided, that the land described shall be conveyed as agreed, on or before April 1st, 1895, and that said Stull shall, on receiving from said Brown the deed of conveyance as mentioned, together with a full and complete Abstract of Title to date of conveyance of said land, pay to said Brown the purchase price in full.

This Contract shall be binding upon the parties hereto, their heirs, executors, administrators and assigns.

Signed,

John Brown.

Norman C. Stull.

Witness,

Richard Peck.

The Last Will and Testament

Of Isaac N. Raymond, of the Town of Mayfield, in the County of Kane and State of Minnesota, made and published the Twenty-first day of May in the year of our Lord One Thousand Eight Hundred and Ninety-Five.

IN THE NAME OF GOD, AMEN, *I, Isaac N. Raymond, of the Town of Mayfield, in the County of Kane and State of Minnesota, of the age of Sixty-Five years, and being of sound mind and memory, do hereby make, publish and declare this my LAST WILL AND TESTAMENT in manner following, that is to say:*

FIRST—It is my will that my Funeral Expenses and all my just Debts be fully paid.

SECOND—I give and bequeath to my eldest son, Henry C. Raymond, Eighty (80) acres of land, known and described as follows: The East One-Half (E. 1/2) of the North-West Quarter (N. W. 1/4) of Section Sixteen (16) in Township Eleven (11), Range Sixteen (16), East of the Third Principal Meridian, in the County of Dodge, and the State of Wisconsin, on the following condition:

That he is to pay his sister, Mary Ann Raymond, One Thousand Dollars ($1000), within one year after my death; on payment of this amount he shall be given the title of said land as described above, free from all claim from any or all of my heirs.

To my son Amos N. Raymond, I give and bequeath Three Thousand Dollars ($3000), to be paid one year after my demise, from the notes and mortgages, or other personal property in my possession at my demise, not otherwise provided for.

To my daughter Mary Ann Raymond, I give and bequeath Two Thousand Dollars ($2000), to be paid in one year after my death, from my estate left after the above provision is provided for.

My wife, Sarah A. Raymond, shall have the use of my Homestead Farm of One Hundred and Sixty (160) acres, and all other property, personal and real, left after the above provisions of my will are satisfied, and all the benefits and proceeds of all the stock, grain or other produce, or personal property

which may be thereon at my death. All the grain, chattels, or other personal property upon said estate, not otherwise provided for, shall be under her full control and devoted solely to her own use and disposition during her natural life.

After the death of my wife Sarah A. Raymond, all the property left, real and personal, after the settlement and payment of all costs of her last sickness and funeral expenses, shall be divided equally among all my children, or their heirs. I would prefer that one of my sons would buy the Homestead from the other heirs, that the place of the hardest struggles of life may be kept in the family.

LASTLY—I hereby nominate and appoint my wife, Sarah A. Raymond, and my son Henry J. Raymond, *to be the Executors of this my last Will and Testament, hereby revoking all former Wills by me made.*

IN WITNESS WHEREOF, I have hereunto set my hand and seal, the Twenty-first *day of* May *in the year of our Lord One Thousand Eight Hundred and* Ninety-Five.

Isaac R. Raymond. SEAL

The above Instrument, consisting of Two sheets, was now here subscribed by Isaac R. Raymond, the Testator, in the presence of each of us; and was at the same time declared by him to be his Last Will and Testament, and we, at his request, sign our names hereto in his presence as attesting witnesses.

Ray Scott,	of	Mayfield,	Minn
E. T. Nichs,	of	"	"
George Royce,	of	"	"

N. B.—It is always necessary in a Will to have two or more witnesses.

LAW WITHOUT LAWYERS.

A COMPLETE COMPENDIUM OF

Legal and Business Instructions.

1. **What is Law?**—Law is a rule of action, or in other words, it is a direction from the governing power of the country telling us what we must or must not do.

2. **Its Necessity.**—Law in some form is necessary, until people become so perfect, so wise and so good, that they need no restraint whatever.

3. **Sources of Law.**—The Law-making power and other sources of law are: first, the United States Constitution; second, Laws of Congress; third, State Constitution; fourth, Statutes of the State; fifth, the Common Law.

4. **Business Laws.**—The State Statutes and the common law are most used in connection with business matters.

5. **The Common Law.**—The Common Law consists largely of unwritten rules and law, and not enacted by representative bodies, but established long ago in England, by long custom and usages, and adopted by the different States, as a body of law. The Statutes of the State or of the United States are of higher authority than the common law, and the common law must always give way to the statutory whenever there is a confliction.

6. **Ignorance of the Law.**—It is a universal rule that the ignorance of the law excuses no one. No one can go into the court room and say he was ignorant of the law. The laws are supposed to be common property and are supposed to be understood, and any violation, ignorantly or intentionally whatever the case may be, must be punished according to the terms of law.

7. **Municipal Law.**—Municipal Law is, therefore, "a rule of civil conduct prescribed by the supreme power of a State, commanding what is right and prohibiting what is wrong."

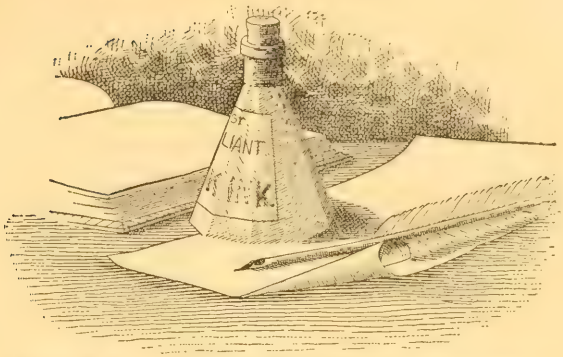
8. **Rights and Wrongs.**—The subjects of Civil Law are Rights and Wrongs; and these are divided into two classes, private and public.

It is the duty of the constituted government to defend rights and redress wrongs, whether they are public or private.

9. **Civil Injury.**—The wrong done to an individual, as the breaking of a contract, is called a Civil Injury. A wrong done to the State for which the law prescribes a punishment, is called a Crime or Misdemeanor.

10. **Plaintiff and Defendant.**—When one seeks redress through the courts, he is said to "bring a suit," and is called "The Plaintiff." The Party against whom a suit is brought is "The Defendant."

He who seeks redress for a wrong suffered must himself be innocent.



THE LAWS AND RULES GOVERNING

THE WRITING AND TRANSFERRING OF ALL KINDS OF NOTES.

1. **Definition.**—A note is a written promise, signed by the person promising to pay a certain sum of money at a certain time, to a person named, or to his order, or to the bearer.

2. **Two Kinds.**—There are two kinds of notes, those payable to order and those to bearer. (See Forms)

3. **Time of Payment.**—A note payable at a future time is not due until the third day after the specified day of payment. The three days of extension are called by universal custom "Days of Grace." The day of payment is generally called the day of maturity.

4. **Parties to a Note.**—The man who signs the note is called the maker, and the party in whose favor the note is drawn is called the payee.

5. **Maker's Responsibility.**—The person who signs a note is under legal obligations to pay the note either to the person in whose favor the note is drawn, or any person he may transfer the note to before maturity.

6. **Requisites of a Note.**—The five things necessary in a note to make it negotiable are: First, that the date of payment be certain to come; second, that it have one of the two words, order or bearer; third, that the amount be specified and certain; fourth, that it be payable in money only; and fifth, that it be an unconditional promise.

7. **Endorsement.**—Paper payable to bearer may be transferred by delivery, but paper payable to a certain person or his order, must be endorsed.

8. **Promissory Notes.**—Promissory notes can be transferred after maturity, but are, however, subject to any defense which might have been made against the original payee.

9. **Forgery.**—Any person whose name is forged to a Note, Draft, or any other commercial paper, is not responsible, and the paper cannot be enforced against him.

10. **Fraud.**—A person who signs a note and is not aware that he signs his name to an agreement that he is to pay a specified sum, notwithstanding this ignorance can be held for the amount, provided the note is in the hands of an innocent party. For instance, if a swindler obtains a persons signature and afterwards writes a note above it and sells the same to a banker or other party who knows nothing about the circumstances, the party whose name appears upon the note, though he wrote nothing but his name on a blank piece of paper can be compelled to pay the note, because it has been transferred into the hands of an innocent party.

11. **Knowledge of Defects.**—No one who receives a note or other commercial paper knowing at the time certain invalidating defects, gets no better right to collect it than the one from whom he received it.

12. **Lead Pencil.**—A note written with a lead pencil is good.

13. **Persons Who Cannot Write.**—A note given by a person who cannot write must be witnessed, and the person giving the same must make his mark, or touch the pen while it is made. (See Form.)

14. **Negotiability** is that form of commercial paper which permits to be transferred to another party, and the party thus receiving it has the right to collect it and receive all the benefits of its promises.

THE LAW OF WRITING AND TRANSFERRING CHECKS AND DRAFTS.

1. **Drafts.**—A draft is a written order, signed by one person, ordering another person, to whom it is directed, to pay a certain sum of money, at a certain time, to a third person, or to his order, or to bearer.

2. **Checks.**—A check is an order on a bank, or banker, to pay another person, or to his order, a certain sum of money, immediately.

3. **Difference between Checks and Drafts.**—A check is always drawn upon a bank or some person who carries on a banking business, and it is always made payable immediately, by a simple order. A draft may be drawn on a bank or on a private party, and may be made payable on demand, or a certain number of days after date, or after sight.

4. **Days of Grace.**—A draft payable at a future time is not due until the third day after its specified day of payment. These additional three days are called "Days of Grace." Drafts drawn at sight, or on demand, and checks, have no Days of Grace. They are payable when presented.

5. **Acceptance of a Draft.**—When a draft, payable at some future time, is presented to the person on whom it is drawn, before it is due, and he agrees to pay it when it becomes due, he writes the word "accepted," and the date, and signs his name in red ink across the face of the draft. The draft then is often called an acceptance.

6. **Certified Checks.**—Where a bank has funds on hand to meet the check, and the holder does not desire immediate payment, the bank will certify the check. This is done by the president or cashier by writing the word "good" or "certified" across the face, with his signature. This gives the holder a claim against the bank, and makes the bank responsible.

7. **Negotiability.**—Checks and drafts, in order to be negotiable, must be made payable to order, or bearer, the same as a note.

8. **Transferring Drafts and Checks.**—Drafts and checks may be transferred the same as notes. If made payable to order, they must be indorsed, either in full or in blank. If payable to bearer, they can be transferred without indorsement, although it is customary and desirable to obtain the indorsement of every holder.

9. **Presentment for Payment.**—A check should be presented for payment at the bank as soon as possible after its receipt. It is unsafe to delay, as in case the bank should fail, the holder would have no right to demand payment of the maker, if he failed to present it at the bank within a reasonable length of time.

THE LAW AND RULES GOVERNING RECEIPTS.

1. **The Importance.**—Thousands and hundreds of thousands of dollars are annually spent in law-suits, because people will not do business in a proper manner. There are many estates tangled up in difficulties, because when money was paid, or other business transacted, the proper receipts were not given or preserved. Many lives have been lost through the careless methods of transacting business and not having the proper receipts to show for it; consequently difficulties, feuds, bad blood, and even murder ensued. Never pay money unless you have the proper receipt to show for it.

2. **Definition.**—A receipt is not a contract, it is only evidence. Thus if a receipt should be given when there was no payment really made, it would have no effect; the debt would still remain. One is always at liberty to prove the truth in spite of a receipt.

3. **Mistake.**—If the receipt has been made for a greater or less amount than the bill or debt, adequate proof of the error is all that is necessary, and the receipt will be set aside.

4. **The Important Feature.**—If payment is made on account, or for a special debt, or in full, it should be so stated in the receipt.

5. **Payment of Note or Check.**—It is not necessary to take a receipt on the payment of a note, check, or draft, because the instrument itself becomes a receipt.

THE RULES AND LAW GOVERNING ORDERS AND DUE-BILLS.

1. **Orders.**—Orders are negotiable, but the person on whom they are drawn is not under obligation to pay them, unless they have been accepted, for an order partakes the nature of a draft.

2. **Due-Bills.**—A Due-Bill is not generally payable to order, nor is it assignable by mere indorsement. It is simply the acknowledgment of a debt; yet it may be transferred. Due-Bills do not draw interest, unless so specified.

FORGERY.

1. **Definition.**—Forgery is the fraudulently making or altering a written instrument. Forgery is more commonly committed by making a check, draft or note and signing the name of some responsible person. It is sometimes done by raising the amount, or by erasing the amounts that are on the note, check or draft, whichever the case may be, and putting in larger amounts.

2. **Not Commercial Paper.**—A forged instrument is not commercial paper. Being false, it represents neither contract nor property, and any person holding or buying forged paper has no power to collect it.

3. **One Whose Name is Forged, Cannot be Made Responsible.**—The act is not his, and one certainly should not be held responsible for another's acts, which are entirely unauthorized. Thus if a note is forged in my name as maker, or a draft forged in my name as drawer, or the acceptance forged in my name as acceptor, or my indorsement forged upon any paper, I do not make the contract and therefore cannot be made to fulfill it, that is, to pay. So if my name is forged as the drawer of a check, and the bank believing it genuine pays it, the bank must lose rather than I. It makes no difference how careful or honest one is who takes forged paper; he must always take the risk of its being a forgery.

4. **Payment Under Mistake.**—But the rule goes still further. One whose name is forged, not only need not pay, but even if he should be himself deceived by the skillfulness of the forgery, and should pay, nevertheless, he may recover his money from the one to whom he paid it. This is but one case of the general principle that Money Paid Under a Mistake must be Refunded. Thus, even if the supposed maker, or drawer, or indorser should, after a careful examination, admit his signature to be genuine and should pay, yet the one to whom he paid would have to refund if the signature turned out to be forged.

5. **Transfer of Forged Paper.**—The transfer of forged paper adds no validity to the paper, as it is nothing more or less than a piece of waste paper. The responsible party who transferred it is responsible for the amount, but the paper itself is worthless. If a person buys a forged note for $100 and sells it to another for $100, and the latter finds it to be forged, then the first one will have to lose the amount.

6. **Raising Amount.**—Paper is sometimes forged by erasing the amount named in a genuine instrument and putting in a larger amount. It is then perfectly valid as to the original sum, but wholly void as to the excess. Even though it is accepted or certified after being raised, the acceptance or certification does not make the acceptor or the bank responsible for any more than the original sum. And if the excess should be paid it could be recovered.

7. **Practical Suggestions.**—The business suggestion to be gained from all these rules about commercial paper is, that in buying it, unless we are absolutely certain that it is genuine and a valid contract in every respect, we should be careful about those from whom we buy it, so as to have some one responsible to fall back upon if it turns out invalid.

THE LAW AND RULES GOVERNING WARRANTIES.

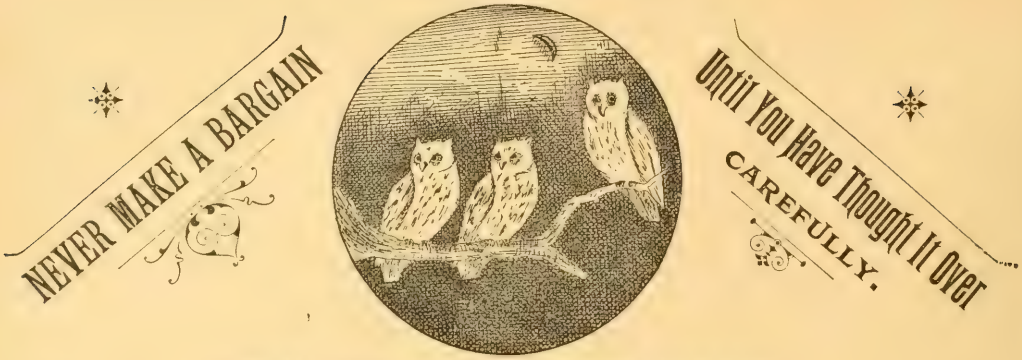
1. **Expressed or Implied.**—A warranty may be either expressed or implied that a certain thing when sold is or shall be as it is promised in the agreement. For example, a seller may warrant a horse sound, gentle, and safe to ride or drive.

2. **The Condition of the Warranty.**—If the goods or articles purchased are not what they are warranted to be, the purchaser may take back the goods and receive back the money paid, or he may claim damages.

3. **Buying Goods.**—There is no implied warranty of the quality of goods which can be inspected by the buyer at the time of purchase, but the rule is that the buyer must himself take care not to be deceived concerning their quality.

4. **Articles Made to Order.**—Where an article is ordered to be made for the buyer for a special purpose, and the buyer relies on the skill and knowledge of the maker to provide him with a suitable article, there will be an implied warranty that the article shall be reasonably adapted to its intended use.

5. **Goods Must be Like Sample.**—In a sale by sample the seller impliedly warrants that the bulk is like the sample; and, if the seller is the maker or producer of the goods, that the goods have no secret imperfections. But it must be a sale strictly by sample; where the buyer still intends to examine the bulk, it will not create any implied warranty. The buyer has a right to examine and return the goods, if they are not the same as the sample.



HOW TO WRITE A CONTRACT.

RULES AND LAW GOVERNING CONTRACTS.

1. **How to Write a Contract.**—It is a prevailing opinion that only lawyers can write contracts; but this is an erroneous idea, for the legal phrases or learning of a lawyer is not at all necessary in order to make a contract legal and binding upon its parties. A person who can write a letter can write a contract, hence a contract is simply a written statement in plain language what two or more persons agree to do or not to do. A bare statement of facts and the proper signatures make a contract as binding as though forty lawyers united to write it. He who can write a note can just as easily write a contract, for a note is nothing more or less than the simple form of a contract. A plain statement of facts is as easily written as the terms and conditions of a note.

2. **Errors.**—If there are any grammatical errors or misspelled words, it will not affect the legal force of the contract in the least. The intent and purpose of the parties when writing the contract will be the interpretation placed upon it by the court, in case any legal question should arise.

3. **Definition.**—A contract is an agreement between two or more persons to do or not to do a certain thing. The fundamental rule of law in regard to contracts is that every one must fulfill every agreement that he makes, unless a new agreement has changed or set it aside. Every person must keep his promise, or pay the penalty or damages for not doing so.

4. **Two Kinds of Contracts.**—Contracts are either written or oral, but it is always best to have a written contract, as the subject matter is definite matter, so no question can arise as to the intentions of the parties when the contract was written.

5. **Oral Contracts.**—Oral contracts are given by word only, and are either expressed or implied. An expressed contract is one definitely expressed in words. An implied contract is one implied from all the circumstances of the transaction.

6. **Implied Contracts.**—Implied contracts are quite common and we shall meet them frequently. They arise in those cases where, though there are no words of agreement by either party, such as "I agree," or "I will," or "I promise," yet something is said or done which in reality amounts to an agreement. Thus, if I buy goods in a shop, I am compelled to pay for them, though nothing is said about paying or the price, for my being there, asking for the goods, and taking them away, are equivalent to my saying, "I will pay for them." My actions say what my tougue does not. One is considered as having agreed to whatever he knowingly leads to believe he has agreed to.

7. **Gratuitous Services give no Claim to Compensation.**—There is no implied contract, because the services were not requested. Were this not so, any one might force upon us, and force us to pay, what we did not want. But if the benefit of anything gratuitously done, is retained when it could be refused, there arises an implied contract to pay.

8. **Who can Make Contracts.**—All those under twenty-one years of age are called minors, and cannot make a contract except for the necessaries of life, school books, and things of that character. Contracts are not good when made with a person of unsound mind.

9. **Consideration.**—Every contract must have a consideration, in order to make it good. A consideration is the thing which induces anyone to enter into a contract

or an agreement, to do or not to do a certain thing. The consideration therefore must be an inducement or benefit, or an equivalent in some way for the things to be done or not to be done. One party must promise to do something as an equivalent to the other's promise. The fact that the consideration is not sufficient, does not, as a rule, affect the binding qualities of the contract. For instance, a party may sell his property for as little as he pleases, but he cannot afterward enter suit for its recovery.

10. **Subscription.**—A subscription to a church or a charity is generally a promise without a consideration, and cannot be enforced against the subscriber if he declines to fulfill it. If, however, he has signed a subscription paper in which the subscription of each person is made the consideration of the others, the contract is valid and he may be compelled to pay, as in the case of any debt.

11. **Consent.**—No contract is good without the consent of both parties. They must mutually agree to the terms of the contract. Their minds must meet on the agreement.

12. **Performance.**—The conditions of the contract or agreement must be performed by one party in order to compel the other party to perform his part. Every party to a contract must perform his part, or be willing to perform it, in order to compel the other party or parties to perform their part or pay damages.

13. **Breach of Contract.**—For the breach of a contract the remedy is generally an action at law for damages. The measure or amount of damages to be given is a fair compensation for the injury done. If no actual loss is incurred, only nominal damages, as six cents, can be recovered. In some cases where the amount of damages may be uncertain, the parties often agree on a specified sum to be paid by one party to the other, if the contract is broken. This is called "liquidated damages." If the amount of damage is certain, however, the parties cannot fix upon any sum in excess of the real damage as a penalty. The penalty will be reduced to the amount of the real damage.

* 14. **Gambling Contracts.**—Wagers or bets depending on chance, as a race, a game, or a lottery, or any contingent event, are unlawful, and all contracts on account of money wagered are void. This is generally the law throughout the United States, but the laws of the various States differ very much.

15. **Sunday Contracts.**—All contracts made on Sunday are void, except contracts which concern what are known as "works of charity and necessity." It is perfectly lawful to sell food and medicine on Sunday, for these are necessities, but not other articles which may just as well be sold any other day. Contracts of sale of such articles are void, and if the purchaser refuses to pay for the goods, he cannot be sued for the contract price, but only for the reasonable value, which may be and often is much below the price.

* Deeds and notes made on Sunday are void. This may sometimes be avoided by dating the document ahead, as on Monday.

* 16. **Bribery.**—Any contract, which directly or indirectly tends to corrupt legislation, is absolutely void. A lobbyist, even if successful, cannot recover the promised reward from his employer, much less a Senator, or a member of Congress or of a State Legislature, who is promised a money or other valuable consideration, for his influence or vote. Such a contract, moreover, is a criminal offence for which a legislator may be impeached, and for which any person concerned may be indicted and punished.

17. **Felony.**—Any person who agrees to take money or value for refraining from exposing, accusing, or prosecuting another person who has committed a felony, such as murder, or theft, or seduction, is guilty of a crime. All such contracts are absolutely void.

18. **Disability.**—Incapacity is never presumed in cases of contracts; but if it is alleged it must be proved by the party making the allegation.

19. **Natural and Artificial Incapacity.**—Incapacities are natural, or artificial. Absolute duress, insanity and imbecility, are examples of the first class; while marriage and servitude are of the latter kind. Natural incapacity is recognized, not created, by law. The incapacity of an infant, or an idiot, cannot be imposed upon, or removed from, any one, by legislation. On the contrary, the legal "infant" of twenty years, and the married woman, having unquestioned natural capacity, are disabled only by positive law.

20. **Contracts Governed by the Law of the State in which they are made.**—If one goes from a State where he is under an artificial legal disability, into a State where no such disability is imposed, the disability is removed while he remains, and contracts he executes there, could be enforced against him. Every contract is to be construed according to the law of the place where it is made.

21. **Impossibility of Performance.**—This is another defence in an action for damages, for breach of a contract. If a promisor is prevented from performing his part, either by an act of God, or an act of a public enemy, or an act of the promisee, he is not liable to respond in damages.

The performance must be rendered absolutely impossible; for the endurance of a mere hardship or difficulty would not suffice. An act of God, in legal

* Deeds and notes made on Sunday are valid in Illinois and some other states. The Supreme Court of Illinois has recently held that contracts made on Sunday are valid and can be enforced.

meaning, is an act, or event, over which man has no control,—neither power to cause nor prevent.

22. **Impossible in Its Nature.**—If one promises to do that which is naturally and obviously impossible, as if one promised to tunnel a range of mountains in a day, for the passage of railroad trains, the contract must be void from its inherent absurdity.

23. **Partial Payments.**—In applying payments on debts drawing interest, it is safe and equitable to follow the rule that payments will first be applied to cancel the interest due, and then to diminish the principal. If a payment is made when no interest is due, then apply it to cancel a part of the principal and the interest accrued on such part. This will make it equally desirable for the debtor to make payment, and the creditor to receive the same. If it is stipulated in the contract that "interest is payable annually," and payment is made and accepted when no interest is due, then in such case the payment should diminish the principal. And if the interest is not paid when it becomes due, it should also draw interest; but a contract for compound interest is never legally presumed.

LEGAL GIFTS.

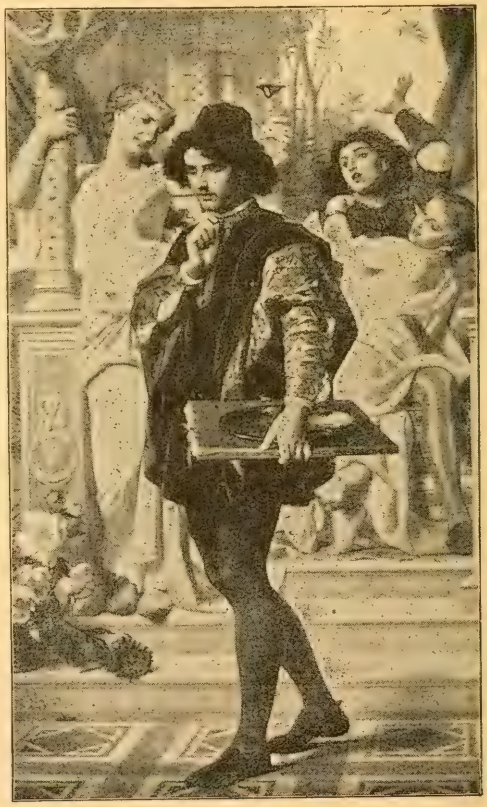
* 1. **Who Can Make Gifts.**—Any person legally competent to transact business, may give whatever he, or she, owns, to any other person. A gift by a minor, a married woman, an insane person, or a person under guardianship, or under duress, would be void, or voidable, according to the circumstances.

2. **Delivery of Gift Necessary.**—A gift must be consummated, that is, the thing given must be delivered before any legal right rests in the grantee. A promise to give is not binding, as it is supported by no consideration. Delivery may be actual or constructive.

3. **Cannot Be Revoked by Donor.**—A Gift made perfect by delivery, cannot be revoked by the donor; but if it prejudices the rights of existing creditors, it is void as to them. It is not, however, void as to future creditors, unless made under actual or expective insolvency, or with a fraudulent purpose.

4. **Gifts Because of Expected Death Revokable.**—Gifts because of expected death are revokable by the donor if life is continued; even after delivery and acceptance. Such gifts are held to have been made because death was supposed to be at hand; and if it does not ensue, the gift is defeated, as the death, which was the cause of the gift, has not taken place.

5. **Possession.**—In order to make a gift absolutely good, possession should be given when the gift is made, and thereby no change of mind or subsequent prejudice can change or revoke the transaction, if made in good faith and without deception.



They made him a Present and sent him away.

ENGAGEMENTS TO MARRY; OR, MARRIAGE CONTRACTS.

1. **Contracts to Marry in the Future.**—Mutual promise by a man and a woman to marry at some future day, constitute a valid contract.

2. **A Marriage Contract.**—A marriage is a civil contract, and is entered into by the mere consent of the parties. If the man says to a woman, "Will you marry me?" or words to that effect, and she says "Yes," or words that imply an affirmative answer, it is by law an agreement or promise of marriage, and both parties are legally held to carry out in good faith the promises thus made.

3. **Breach of Promise.**— If either party refuses to carry out the contract, he or she is guilty of breach of promise, and may recover damages of the other party. It is not very often, however, that the man sues the woman, though he has the right to do so if she fails to make good her promise.

4. **Necessary Proof.**—Generally in case of a lawsuit for breach of promise, there are no direct witnesses, as people generally become engaged without the presence of a third party, but the engagement may be implied by the conduct of the party sued.

5. **Implied Evidence.**—The promise of marriage is implied from circumstances, such as constant visits, presents, or open declarations of the parties, the reception of parents or friends, as an engaged couple, without any objections from the party accused. There are many ways of expressing serious intentions without an open declaration in words. Conduct speaks louder than words.

6. **Excuses for Breaking the Promise.**—A refusal may be justified on the ground of the bad character or conduct of the other party; poor health of either party is sometimes a good excuse, but not generally. If the woman were a widow or divorced, and concealed this fact from the man, this justifies a refusal to marry on his part.

7. **Time of Marriage.**—When a man promises to marry a woman without stating any special time, the law holds him guilty of breach of promise, unless he is ready to fulfill his engagement within a reasonable time, five years was held by law as being an unreasonable time.

8. **When a Promise is Not Binding.**—If either party is under twenty-one years of age, he or she is not bound by promise to marry, and the law will excuse them any time from making good the promise; but, if the man is over 21 years of age, he can be held, and must make his promises good or pay the damages.

9. **Seduction.**—Seduction of a woman of lawful age under promise of marriage and subsequent refusal to marry on his part, while not a crime, subjects the person so doing to heavy damages in a civil action for a breach of promise to marry, the seduction being used in aggravation of the ordinary damages allowed in actions for breach of promise to marry.

POPPING THE QUESTION.

10. **A Cowardly Act.**—A young man who makes promises of marriage to a young lady, or gives her reason to believe that he is sincere in his visits and intentions, and then without excuse or cause devotes his attentions to another, commits a cowardly act. No honorable young man will do it.

No young man has a right to demand a young lady's exclusive company, without some definite understanding, and a young lady is very injudicious, if not foolish, if she receives the attentions of a young man, who claims her entire society, without some understanding or promise of sincerity. When the promise of marriage has once been made, it should be kept in good faith, unless both parties mutually agree to dissolve. The law always requires the promises of marriage to be met in good faith.

THE LAW GOVERNING THE RELATION OF PARENT AND CHILD.

1. **Ancient Authority.**—In past ages the father was by custom considered as absolute monarch of the home. In the oriental countries of to-day, the same custom still prevails; modern progress, and modern ideas, however, have changed old customs, and the authority of the parent in civilized countries has been considerably limited by law.

2. **Rights of Parents.**—The parent has control of his minor child, and has all reasonable authority to enforce obedience. As long as the parent treats his child properly, no one has a right to interfere with his authority, or take the child away and retain him against the wishes of the parent.

3. **A Runaway Child.**—A child has no right to leave home without permission of the parent, and should a child run away he can be brought back by force. If relatives or other parties keep him and refuse to give him up, the parent by legal process can obtain possession of his child, unless it can be shown that the father is brutal, or is not capable on account of drunkenness or other causes to take proper care of his child.

4. **Adoption.**—Any child, whether its parents are living or not, may be adopted. In that case the parent is no longer entitled to the custody, but the adopting person is. The child cannot be adopted without the consent of its parents, if they are living, but the consent having once been given, cannot be revoked. If the child is over fourteen years of age, it must also consent to the adoption. Under any circumstances the court has the right to refuse to permit the adoption if it considers that the person petitioning is not a proper person to have the custody.

5. **Method of Adoption.**—Application must be made at the county court, and the judge will consider the application and will pass upon it.

6. **Punishment of Children.**—A parent has a right to punish his minor child, providing he is not guilty of cruelty. Brutality is a crime, punished by severe legal penalties. The parent must be reasonable in his punishment, leave no bruises or in any way injure the health of the child.

7. **Right to Earnings.**—A parent is entitled to all the earnings of his minor child. If the child should refuse to turn over his earnings to the parent, the employer of the child may be notified, and be compelled to pay the parent only.

8. **Special Rights.**—The parent may, however, make free his child from all obligations to himself and allow the child to collect his own wages and do for himself. When a parent thus makes public such a declaration, he cannot thereafter collect the child's wages.

9. **The Property of the Child.**—A parent may control the earnings of the child, yet he has no control of the property belonging to the child, either acquired by gift, legacy or any other way. If a parent should appropriate his child's property, it would be just as criminal in the eyes of the law as stealing any one else's property.

10. **Parents' Obligation to Support.**—Parents are legally held for the support of their minor children. If a child has property, it does not relieve the parent from the support of his child; he however can apply to court and get permission to use a part, or all of the income of the property for the child's support.

11. **Illegitimate Children.**—It is a parent's duty to support even an illegitimate child. Such a child has legally no father, but his putative father, as he is called, may be compelled by the overseers of the poor to fur-

nish the child with reasonable support, so that it shall not become a "burden on the parish." All children born in wedlock are legitimate, unless it is proved that the husband could not possibly be the father. The adultery of the wife cannot affect the legitimacy of the child. He is conclusively presumed to be the child of the husband. It makes no difference how soon after the marriage the child is born. A child born the same day as the marriage, if subsequent to the ceremony, is legitimate, provided there is good reason for believing that the husband is the father.

12. **Effect of Illegitimacy.**—An illegitimate child cannot inherit from its father, but may inherit from its mother. It may take a legacy under the will of its putative father, but if there is no will it can only inherit from its mother.

13. **Children's Obligations.**—Where the parents are unable to support themselves, the child is legally held for their support and care, but it must be first shown that the parent, or parents, are unable to support themselves.

14. **Crimes.**—The parent cannot be held for crimes committed by his minor child. If a child commits a premeditated crime, he is personally liable.

15. **Guardian.**—If a child has no parents living, a guardian may be appointed, or he may appoint his own guardian, who will in a legal sense exercise the prerogative of a parent.

RENTING LAND.

THE LAW OF LEASES AND TENANTS.

1. **Definition.**—A Lease is a contract by which the temporary use and possession of lands and buildings is granted by one person to another.

2. **Parties.**—The owner or the party making the lease is the lessor or landlord; and he to whom it is made is the lessee or tenant. The charge, which the landlord makes for the use of his property, is the rent.

3. **Oral or Written.**—A lease must be in writing if the property is to be let for more than one year. An oral lease of land for the period of one year is good and binding on both parties, but otherwise it creates only a tenancy at will. A lease is usually made for a certain length of time, with, perhaps, a privilege of renewal at the end of the lease. Dwelling houses are usually rented for a year, with the rent payable quarterly.

4. **Things Implied.**—A lease will carry with it to the tenant everything belonging to the landlord which is necessary for the proper use and enjoyment of the property leased. Thus, the words "house," "farm," "store," etc., unless they are specially defined in the lease, pass everything to the tenant usually meant by them.

* 5. **Form of a Lease and What It Should Specify.**—Leases, especially for terms of any length of time, should be executed under seal, as are other conveyances of real estate. Such a lease should recite the names of the parties, the date for beginning the lease, and the title which the landlord has in the property. It should next state the consideration, which is usually the rent. Then follow the words, which give effect to the lease, "grant, demise and farm-let" being the words commonly used. They are accompanied by a description of the premises to be leased.

6. **Covenants of a Lease.**—Most leases contain covenants setting forth the agreements of the two parties in regard to the payment of taxes and insurance, renewals of the lease, modes of cultivation (if it is a farm), fixtures, etc. A lease should also provide for a forfeiture of the lease on a non-payment of the rent, or a breach of a covenant. This will enable the landlord to re-enter and eject the tenant in case of a breach of covenant or a failure to pay the rent when due.

* 7. **Leases That Must Be Recorded.**—Leases for a long period of years must be recorded to insure their validity against other parties without notice. Ordinarily this is so of leases for more than seven years; but in some States leases for a less number of years, or even for one year, should be recorded.

8. **Implied Covenant.**—In all leases under seal there is an implied covenant that the lessor has a good title to the property leased. In all leases there is an implied covenant that the tenant shall have undisturbed possession of the premises.

9. **Renewal.**—If a landlord covenants to renew the lease upon its expiration, he must renew it on the same terms as before. But this covenant will not become a part of the new lease, so that the landlord will have to renew it also, unless it clearly appears that the renewals were to continue indefinitely at the desire of the tenant.

10. **Repairs.**—A landlord is not under obligation to repair the premises, unless it is so expressly agreed. Even

THE CHARIOT RACES.

though the house becomes dilapidated and even uninhabitable, the landlord is still not bound to make repairs. There is also no implied covenant that the premises are suitable for the purposes for which they are leased.

11. **Taxes.**—A landlord is bound to pay the taxes, unless the tenant covenants to do so.

12. **Provision to Re-enter and Eject Tenant.**—Unless there is a covenant allowing the landlord to re-enter and eject the tenant on his failure to pay the rent when it is due, he has only his remedy as for any other debt. If such a provision is inserted in the lease, the landlord must make a proper demand on the exact day the rent is due, in order to ensure his right to enter.

13. **A Tenant's Duties.**—Except by express agreement, he is not bound to make repairs. In general, however, he is bound to leave the premises wind and water tight at the end of the lease. He must therefore, make any repairs necessary to preserve the house from actual injury, for instance, by shingling, replacing broken glass, etc. If he chooses to make other repairs, he cannot enforce a claim against the landlord to repay him for such repairs.

14. **Payment of Rent.**—A tenant is, of course, bound to pay his rent promptly as it becomes due.

15. **Return the Premises in Good Condition.**—If a tenant covenants to return the premises in good repair, reasonable wear and tear excepted, he is bound to rebuild in case they are injured or destroyed by fire. Even if there is no such covenant in the lease, he is still bound to pay rent, though the building is destroyed. Therefore, a lease should provide that, if the premises become wholly or in part untenantable by fire, the rent should cease or abate proportionably; and that the premises shall be returned in good repair, except in case of injury by fire or other unavoidable accident. Statutes have made a similar provision in a number of States.

16. **Cultivation of Land, and the Harvesting of Crops.**—A tenant of a farm is bound to cultivate it in such manner as good husbandry requires. If his lease is for an uncertain period, or if it is at will, and is terminated by his landlord, he has a right to harvest such annual crops as he has planted and are growing at the time his lease is ended.

17. **Tenant May Under-let.**—A tenant may under-let, unless there is an agreement that he shall not, but he is still personally bound to the landlord for the rent. He may also assign the whole lease, unless there is an agreement to the contrary. He should notify his landlord of the assignment.

18. **Transfer of a Whole Lease.**—The transfer of a whole lease is an assignment, and is entirely distinct from the transfer of any part less than the whole, or an under-lease. Therefore, a covenant not to do one of these two things, will not prevent a tenant's resorting to the other. Any express covenants made in the lease can still be enforced against him by the landlord; but implied covenants pass with the assignment.

19. **Termination.**—When a lease is for a definite period, the tenant must leave at the end of this period, or the landlord has a right to turn him out.

20. **Tenant at Suffrance.**—If a tenant holds over at the end of a lease, or if he is an under-tenant, and holds over after the lease of his landlord has expired, without the original lessor's consent, he becomes a tenant at suffrance; and the landlord can turn him out without giving him notice to quit. A tenant at suffrance is not liable for rent.

21. **Tenant at Will.**—But where a lease is created orally, or where a tenant holds over, after his lease has

expired, with his landlord's consent, he is a tenant at will, that is, the lease may be terminated at the will of either party. A tenant at will, however, must have due notice to quit from his landlord, and give due notice of his intention to quit, before he can be turned out or leave.

22. **Notice to Quit.**—This notice to quit must be given in advance, and usually must be of the same length of time as the period between rent days. The notice should also terminate on a rent day; but if the rent is in arrears, notice may be given at any time, and may be for a shorter time, usually fourteen days. The laws in the different States, in regard to notice, are not at all uniform, however. The notice should also be in writing, and should specify the day on which the tenant is to leave.

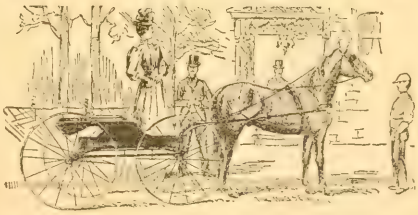
23. **Tenant's Intention to Quit.**—A tenant's notice of his intention to quit is in general subject to the same rules as the landlord's notice. It should be given to the one to whom he is liable for his rent, or to his authorized agent. The death of a tenant at will, or the assignment of his lease, would terminate it, though the landlord might treat the assignee of a tenancy at will as a tenant at will.

24. **Tenancy From Year to Year.**—In most States a tenancy from year to year has grown out of the tenancy at will. It is a general lease made orally, where rent is paid yearly, or at equal parts of a year, and is considered a lease for a year which can only be terminated at the end of the year, by a notice given six months in advance. If the tenant is allowed to hold over into the second year without notice, he will be considered as holding for this second year; and so on from year to year, until either party terminates it by giving the proper notice. The notice probably need not be for so long a period as six months in some States. If the oral lease was made for a definite length of time, it terminates at the end of that time without notice, but may be continued as a tenancy at will, or from year to year. A tenancy from year to year may be assigned. In Massachusetts and Maine tenancies from year to year are not recognized.

25. **Fixtures.**—Those things which are attached to the premises by the tenant, with a clear intention to remove at the expiration of his lease, may be taken away by him when he leaves. But those things which have been permanently attached, cannot be taken away. The intention of the parties, however, is to govern these removals, especially if that intention is expressed in the lease.

26. **What Can be Removed.**—There are several tests which indicate, in a general way, what may be removed by a tenant. One test is, if the things are fastened with screws, or in any other way, so that they can be readily removed without injury to the premises. Another test is, if by the removal of the fixtures, he can still restore the premises to the condition in which he found them. It should be said that the law is lenient to tenants, so long as they follow these reasonable rules. Fixtures used in trade or manufacture may almost all be removed, so long as the premises can be substantially restored.

THE LAW AND RULES GOVERNING SALES.



1. **A Bill of Sale.**—A Bill of Sale is not a document necessary to a sale. A Bill of Sale is used when it is thought best to have some formal instrument showing the transfer, as where one sells his business and his stock in trade to another. The inventory would be on another sheet and enumerate all the articles in detail and should be signed.

2. **A Sale is an Agreement to Exchange Property for Money Only.**—If it is an exchange of property for property, it is a trade or barter and not a sale.

3. **Requisites of a Sale.**—There are certain conditions that must exist before a sale can take place. First, the property must be in existence; secondly, it must belong to the seller; thirdly, a particular property must be referred to or set apart.

4. **Delivery.**—Delivery is not essential to complete a sale, as between the buyer and seller, for the buyer has a right to take the goods when he pays for them, but not until then.

5. **Quality.**—If there was no express agreement as to quality or fitness, the buyer must take the risk and he is bound to keep the goods he purchased, unless he can show fraud or misrepresentation on the part of the seller.

6. **The Sale of Land.**—All contracts or agreements for the sale of land must be in writing, and some part or portion of the money must be paid as a consideration in order to hold both parties to the conditions of the contract. Contracts relating to real estate are of a different character from those concerning personal property. By

the Statute of Frauds, no agreement concerning the sale of real estate, or any interest therein, is valid unless immediately executed, or some note or memorandum of the same be made in writing and signed by the party to be charged, or by his authorized agent. The delivery of the deed of conveyance, duly executed, is a conveyance of the title.

7. **A Distinction Between a Contract of Sale and a Contract to Sell.**—There may be a binding contract between two parties, one agreeing to sell a given thing for a given price, and the other agreeing to buy that thing and pay that price; but still no property is transferred by that contract. Such a contract is executory, and may be entirely valid, even if it relates to the sale of goods not yet manufactured or of produce not yet existing. If I contract to sell the corn I expect to harvest next year for so much per bushel, I am bound to do as I promise, if I have a consideration for that promise; but evidently no title passes to a purchaser, for I as yet have no corn to which I can give a title. This is of the same nature as any other executory contract.

8. **Grain and Vegetables.**—Grain and vegetables cannot be sold or a Chattle Mortgage given on them until the grain is sown or the vegetables planted.

9. **The Seller's Lien.**—The seller has a lien on the goods for the price, and may refuse to deliver them until that is paid. But if it was agreed that credit should be received for the goods, the purchaser may demand them without tendering the price. In the case of sale for immediate payment, (which is understood if there is no agreement to the contrary,) and the price is not paid by the buyer, the seller may either rescind the sale, or sell the goods under his lien and look to the purchaser for the balance of the price, if they do not bring the amount; or if they bring more than the price agreed to be paid, he, selling under the lien, must pay over the surplus to the buyer.

10. **Buying by Sample.**—If a thing is sold by sample, it is warranted as good as the sample. If the buyer has an opportunity to examine the thing and does not, neither gets an express warranty, he takes the risk and should not afterwards complain. If there is some hidden defect known to the seller, he must disclose it, or at least not conceal it if inquired after by the purchaser. If he diverts attention and evades, and thus deceives the buyer, it is a fraud and would be ground of avoidance.

11. **The Buyer's Caution.**—In a word, whatever is the subject of a sale, whether real or personal property, the rule "Let the purchaser beware" applies. No one should be influenced by the puffs of owners, the opinion of outsiders, or flattering guesses of anybody. If you have any doubts, demand express warranties in a form to be proved, and if they are refused, then keep your money.

12. **No Title.**—If a person buys goods of any party, and these goods prove to be stolen goods, the purchaser has no title whatever. If a purchaser buys land, and finds that the seller did not own it and had no claim upon it, the purchaser has no title whatever. Great care should therefore be exercised in buying real estate, and see that there is a good title to it. A few dollars expended in this way may save hundreds.

13. **A Sale of Notes, Mortgages, Etc.**—Notes may be sold by their proper assignment, provided the notes have not matured. Mortgages can be sold by filling out an assignment, and go before a Notary, and have it acknowleged. Mechanics liens, or any other liens upon property may be sold by the assignment of the claim.

THE LAW AND RULES GOVERNING

CHATTEL MORTGAGES.

1. **Definition.**—A Chattel Mortgage is a sale of personal property as security for some debt or other obligation, on condition that if the money is not paid with interest as agreed upon, the Chattel Mortgage becomes a valid sale of the property which it represents.

2. **How to Write a Chattel Mortgage.**—The form of a Chattel Mortgage is very simple. A blank may be procured and filled out as shown in this book. But any writing covering the conditions as given in the form is just as good.

3. **Chattel Mortgages Must be Filed.**—The Mortgagor or seller usually retains the property mortgaged in his possession. Therefore, in order to protect the mortgagee's or buyer's interest from creditors of the mortgagor or subsequent purchasers from him, the mortgage must be filed in the office of the town or county clerk, according to the statute laws of the place where they are given.

4. **Equity of Redemption.**—The statutes always provide that the mortgagor shall have a further time after

the debt is due, in which to redeem the property. This is called an "Equity of Redemption," and is commonly fixed at sixty days. At the end of this time, the mortgagor loses all right to the property. But Chattel Mortgages almost always contain a power of sale, by which the mortgagee may take the property immediately if the debt is not paid at its maturity, and sell it at public auction, or at private sale if the mortgage so provides. If there is a surplus from such sale after payment of the debt and expenses, it belongs to the mortgagor.

5. **Stock of Goods.**—A merchant cannot mortgage a stock of goods if it is the intention of the parties that he may sell and replace the same in the usual course of business as against creditors. Such a mortgage is good between the parties.

6. **Assigning Interest in Mortgaged Property.**—The mortgagee may assign his interest in the mortgaged property, and his assignee then acquires all his rights and duties. The mortgagor may also assign his interests in the property, that is, his equity of redemption, subject of course to the rights of the mortgagee.

MORTGAGES.

JOHN, IF YOU HAD NEVER SIGNED THAT MORTGAGE, WE WOULD NOT BE IN THIS CONDITION TO-DAY.

1. **Definition.**—A mortgage is a conveyance of real estate as security for a debt or other obligation, that becomes void if the debt is paid or the obligation for which it was given is performed.

2. **Mortgagor and Mortgagee.**—The party giving the mortgage is called the mortgagor, and the one to whom it is given, the mortgagee.

3. **Form of Mortgage.**—A mortgage is, in form, a deed; and all the formalities of signing, sealing, witnessing, acknowledging and recording are necessary to its validity to the same extent as is in case of a deed. A mortgage, however, contains a clause, providing that on payment of the debt with interest, or performance of the obligation on or before a certain date, the conveyance shall be defeated.

4. **Foreclosure.**—In case the mortgage is not paid, a proceeding may be begun to foreclose, that is to cut off the right of redemption.

5. **Different Methods of Foreclosure.**—There are many different methods in the different States, of enforcing a mortgage, and obtaining a foreclosure. Perhaps the most common mode is by bringing a bill in a court of equity to obtain a decree of the court, that, if payment is not made within a certain time (often a period fixed by statute), the property shall be sold publicly and the proceeds applied to the payment of the debt and the costs of the sale. The surplus, if any, then belongs to the mortgagor. *

6. **A Power of Sale.**—In order that the security may be enforced more promptly than by means of a foreclosure, it is now quite common to insert in mortgages a power, by which, if the debt is not paid or the obligation performed when it becomes due, the mortgagee may, after a certain number of days, sell the property at public auction. After reimbursing himself and paying the costs of the sale, the surplus, if there is any, then belongs to the mortgagor.

7. **Assigning a Mortgage.**—A mortgage may be assigned, and the purchaser or the assignee takes the same interest in the property as the mortgagee had, subject to the mortgagor's rights. An assignment should be executed, delivered and recorded in the same manner as a deed.

THE LEGAL PRINCIPLES OF LAW.

1. **Definition.**—A mortgage on real estate is nothing more nor less than a sale of the land on certain conditions. But the sale is not complete if the money is paid for which the mortgage was given. Mortgages are always security for some debt or liability.

2. **Parties.**—Parties signing and giving a mortgage are called the mortgagor. The parties in whose name the mortgage is given are called the mortgagee.

3. **Redemption.**—When the debt for which the mortgage is given is paid, the mortgagor has his rights restored. This right is called the right of redemption, and cannot be taken away without a judicial sale or by the mortgagor's consent. The right remains, with certain limitations, after default in payment of the debt as expressed by the mortgage; and the failure to perform the obligation is compensated by interest.

4. **Foreclosure.**—The cutting off of all the rights to redeem the property is called foreclosure. This can only take place in case the mortgagor fails to meet the payments or agreements of the conditions stated in the mortgage. The Statutes of the State must be strictly followed, or the sale made under foreclosure will not be good.

5. **Deficiency.**—When the mortgaged property is sold by foreclosure and the amount is not sufficient to pay the debt, then suit can be brought against the party for deficiency. The mortgagor's signature on a note secured by a mortgage, does not relieve him from paying the full amount of the note if the property mortgaged is not sufficient to pay it.

6. **Part Payment.**—The holder of a mortgage cannot be compelled to take payment for part of the mortgage when it is all due.

7. **Transfers.**—Whatever transfers the title to the debt, will also transfer the title of the mortgage, which is the security of the debt.

8. **Assigning Mortgages.**—The proper mode of assigning a mortgage is by endorsing the assignment or transfer upon the mortgage, or by a writing referring to and describing it. If the purchaser has no such writing, he cannot forclose under the power of sale, but he can have the same remedies in equity by way of court proceedings.

As a general rule, the assignee of a mortgage becomes owner in all the rights of the mortgaged premises which the assigner possessed as mortgagee.

9. **Renewing the Notes of a Mortgage.**—If the mortgage is given to secure the payment of certain promissory notes, and the notes are renewed and the time of payment thereby extended, such renewal is not a satisfaction of the original debt, of which the notes are only the evidence, and that to take a new or substituted note does not pay the debt.

10. **Execution.**—The mortgage should be signed by the mortgagor and witnesses the same as a deed and delivered to the mortgagee.

11. **Acknowledgment.**—It should be acknowledged as a deed is, and with the same formality. The acknowledgment of a mortgage is made for the same purpose as the acknowledgment of a deed; that is, to put the instrument in a condition for record.

12. **Recording.**—The mortgage must be recorded in the county where the real estate is situated. Otherwise it is not good. A recording is not necessary as between the two parties who make the contract, but in case of transfer, or loss of papers or burning of the mortgage it is always best to have it recorded.

PROPERTY THAT CANNOT BE TAKEN FOR DEBTS.

1. Liabilities for the Debts. — A certain amount of property is now, by the provisions of the statutes of the various States, exempt from the liability for the debt of the owner, and cannot be taken by the Sheriff on execution. The amount varies greatly, some States being much more liberal than others.

2. **Homesteads.**—If such property consists of real estate, it is called a "homestead." The value of a homestead is usually limited to a certain amount, as $1,000, for the purpose of exemption. If the land is worth more, it is sold by the Sheriff; $1,000, or whatever the amount limited by law may be, is paid to the debtor, and the surplus goes to the creditor.

3. **Owner Must Be Head of Family.**—In order to be entitled to claim a homestead in land, the debtor, in most States, must be a resident householder and the head of a family. An unmarried person with no family depending on him for support is obliged to give up all his land for the payment of his debts, and cannot, as a rule, keep as much personal property exempt as the head of a family.

4. **Family of Deceased Debtor May Claim.** — If any debtor dies, leaving a wife or children, or both, these persons may claim the same exemption of homestead and personal property as that to which the debtor was entitled. A policy of insurance on the life of the debtor in favor of the wife or children, cannot be claimed by the creditors, but the insurance money must be paid to the wife or children only, and is free from all debts.

5. **Taxes.** — All kinds of property, real and personal, including homesteads and exempt property, can always be seized and sold for the non-payment of taxes, assessments, or any claim of the State or the United States.

6. **Debt for Purchase Money.**—A homestead or any article of personal property, otherwise exempt, can always be taken on execution when the debt is for the purchase money of the land or article.

*7. **Record of Notice of Homestead Claim.**—It is generally necessary to file a notice or deed, or paper of some kind claiming the land as a homestead, in the office of the county where the records of deeds are kept. The word "homestead" entered on the margin of the record of the deed is sometimes sufficient. If this is not done, the debtor is supposed to have waived his right to claim the exemption. Such a notice is not necessary as to personal property.

8. **Consent of Wife to Sale.**—After the homestead is so claimed or designated, it cannot be sold or mortgaged by the owner, if married, without the written consent of his wife. She must sign the deed or mortgage with him. In States where the law requires it, her formal acknowledgment must be taken separate and apart from her husband, and she must say that she executes the paper without any fear or compulsion on his part.

9. **Personal Property Exempt.**—Besides the homestead, if the debtor owns one, there is certain personal property which cannot be taken away from him by his creditors in payment of his debts. This consists generally of wearing apparel, household furniture, family

*No notice of the claim of homestead needs to be filed in Illinois and some other states. Occupancy of the property as a homestead being sufficient in order to entitle it to be exempt.

books and pictures, a certain number of domestic animals, provisions and food for the family, which has been actually purchased.

10. **Wages.**—The wages of laboring men, earned by them within a certain period prior to the levy by the Sheriff, usually sixty days, whether paid to them or still in the hands of the employer, cannot be taken by the creditor.

11. **Tools of Trade.**—The tools, instruments and implements of trade, by which a person earns his living, are usually exempt, as to take them away from him, would deprive him of the means of a livelihood, or from earning any money with which to pay his debts in the future.

The libraries of ministers, lawyers and physicians are exempt for the same reason.

12. **Insurance.**—Insurance on homestead and exempt property is for the benefit of the debtor alone, and in case of loss the money must be paid to him, and he can hold it exempt from execution.

THE LAW CONCERNING WILLS.

1. **Definition.**—A will is a disposition or gift of property, usually in writing, by the owner, to take effect after his death. The person making the will is called the testator, or if a women, the testatrix. The persons to whom personal property is willed are know as legatees, and those to whom real estate is donated are known as devisees.

2. **Form of Will.**—No exact form of words is necessary to make a will good at law. Use simple language, and state fully and plainly all the particulars concerning every provision or condition of the will.

3. **Who Can Make a Will.**—All persons of sound mind and memory, and of the requisite age, may make a will. The age at which a person is competent to dispose of his property in this way varies greatly in the different States, but it is usually twenty-one. Citizens of another country, resident in the United States, may make wills, but they cannot dispose of land by gift of will in many States.

4. **Who Cannot Make a Will.**—Persons of unsound mind, idiots, insane from disease, even those afflicted with a derangement of a single faculty of the mind with bright intervals, are not considered able to make a will, and the will if drawn up is void. The will of a deaf and dumb or a blind person, however, is good and valid; so is that of a person given to drunkenness, unless he was not in possession of his faculties when the will was made. If the testator is able to understand the nature and amount of his property, the claims of others on the same, and make up his mind as to the disposition of it without prompting, he is considered of sufficient mental ability to dispose of it by will.

5. **Must Be in Writing.**—Wills must be in writing, but it is not necessary that the testator should himself write the body of the will. Wills that are wholly in the handwriting of the testator, are in a few States valid without witnesses, if found among the valuable papers of the testator after his death.

6. **Signing.**—The testator must sign his name to the will, in order to make it valid. If he is unable to write, he may make his mark. If he is unable to read, the will must be read to him before he signs it.

7. **Witnesses.**—The testator must sign the will in presence of witnesses, or if made elsewhere, he must acknowledge to them that it is his signature, and declare that the instrument is his will. The number of witnesses required differs in various States; some require two, others three, and one as many as five.

THE DUTIES OF EXECUTORS AND ADMINISTRATORS.

1. **The Executor.**—The executor is a person appointed by the maker of a will to take charge of the property at his death and to carry out the conditions and instructions of the will.

2. **The Administrator.**—The administrator is a person selected by the court to take charge of the estate of a deceased person who has left no will, and to distribute the property to the heirs according to law.

3. **Duties.**—The duties of executors and administrators are substantially the same. There are some points of difference:

An administrator has only possession and control of the personal property of the decedent. The real estate goes to the heirs at once.

An executor generally is entitled to the possession of all the property of the testator.

4. **Bonds.**—Administrators are compelled to give bonds for the faithful performance of their duties. The bond is in the amount of double the value of the property left in their hands for their disposal. Executors are often compelled to give bonds, but provision is usually made in the will. If any one, however, is interested in the will, they can compel the executor, if he is not considered reliable or responsible, to give sufficient bonds for the faithful execution of the will.

5. **Who Can Be an Executor.**—In order to be qualified to become an executor, a person must be of full age and in the possession of all his faculties. No person incapable of making a contract can be an executor. A person under twenty-one years of age, or a citizen of another country, not residing in this country, or one who has been convicted of an infamous crime, such as murder or theft, or any one who is guilty of habitual drunkenness, or dishonesty, or improvidence, or is wanting in mental capacity, is incompetent to serve as an executor. If any such person is named as executor in the will, he will not be allowed to qualify or take possession of the estate.

6. **Who May Be an Administrator.**—The same qualifications are necessary for administrators as in the case of executors. Certain persons are entitled to administer on the property of the decedent in preference to all other persons; and they must be appointed, unless some valid objection can be urged against them.

7. **The First Duty of an Executor.**—The first duty of an executor is to present the will to the proper court for probate. These courts are usually held at the county seat. The executor applies for and obtains a writ known as a citation, a paper in the nature of a subpœna. This citation demands the presence of the legatees and next of kin in court on a particular day. Copies are served on all persons interested in the will.

*8. **The Authenticity of the Will.**—The executor subpœnaes the witnesses to the will, to appear and testify as to its execution. If they are dead, witnesses who are familiar with their handwriting must appear and testify as to its genuineness. If no objections are made to the authenticity of the will, it is admitted by the Judge or Surrogate to probate, and is transcribed upon the records of the court. The original will be returned to the executor. The executor must then qualify by accepting the trust and taking the oath to faithfully carry out the trust. Letters testamentary, as they are called, are then issued by the court to the executor.

9. **Appraisement and Inventory.**—On application of the executor, appraisers are appointed to estimate the value of the estate. Notice must be given to all the interested parties. An inventory of all the personal property is then drawn up. Property exempt from execution is included in this inventory, though it is not liable for the testator's debts. All debts due the estate, bonds, mortgages, notes, accounts, money, etc., must be specially mentioned and described. The inventory is signed by the appraisers and returned to the office of the court. The course to be followed is the same as in the case of administrators.

10. **Payment of Debts.**—The executor or administrator should then give notice, by publication in the newspapers, for all creditors to present their claims against the estate of the deceased in writing. In addition to this, copies of the notice should be sent by mail to all known creditors. The creditors must obey this notice within the time limited in the notice, or they can not complain in case the executor or administrator has paid over all the assets of the estate to those who have presented their claims.

11. **Order of Payment.**—The funeral expenses of the deceased are to be paid first. Then all taxes due to the United States, and debts which have a preference by the laws of the United States. Then, taxes due to the State. Then, judgments in the order of their priority. Then, bonds, sealed instruments, notes, bills, and all ordinary debts, in full if the assets are sufficient, otherwise in proportion.

12. **Powers of Executors and Administrators.**—If there is not enough money to pay the debts and legacies, the executor may sell sufficient personal property to raise the money to do so. The real estate must be sold if necessary. The sale must generally be public—at auction. The will, however, frequently confers the right of private sale on the executor. An executor or administrator has no right to carry on the business of the testator. If he does he is personally liable for the debts contracted in the business.

13. **Should Not Sign Notes.**—Negotiable paper should not be issued by an executor or administrator in the name of the estate. He is personally liable on such paper if the assets of the estate are not sufficient to meet it. To relieve himself of this liability he may add to the note the words "if assets are sufficient." He is then not liable, but such a note is not negotiable.

14. **Compensation.**—Executors and administrators are entitled to compensation for their services. They are generally given, in most States, a commission, though the heirs and the administrator or executor may agree upon a certain stipulated amount. But more commonly a rule prevails, that the amount of commission be fixed by law.

*In Illinois original wills are required to be filed and remain with the clerk of the county or probate court, and some other states have the same statute.

THE LAW ON HIRED HELP.

HOW TO WRITE CONTRACTS AND MAKE AGREEMENTS WITH HIRED MEN.

1. **Form of Contract:—**

This Agreement, Made this *First* day of *March, 1894*, between *Jacob Barnes*, of the *Town of Hubbard, Dodge County, Wisconsin*, of the first part, and *Samuel Jones*, of *the same place*, of the second part, witnesseth as follows: The first party hereby agrees, to employ the second party to work for him, as *laborer*, for *Eight months*, from and after *May 1st, 1894*, for the sum of *$18 per month*, and to furnish him, the second party, board, lodging, etc. The second party agreeing to work faithfully for the first party during the time and upon the terms above mentioned.

Witness our hands, this *1st day of March, 1894*.

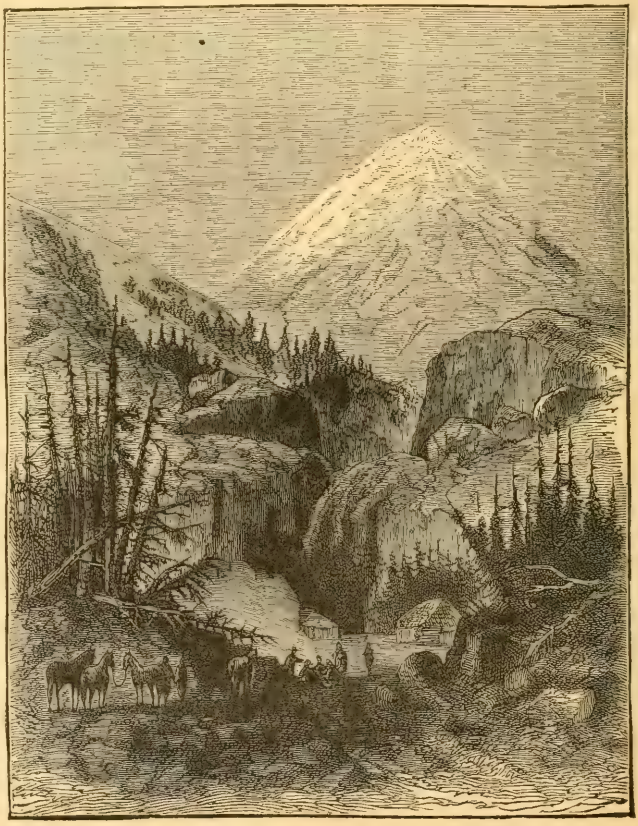
Jacob Barnes.
Samuel Jones.

2. **Importance.**—A great deal of trouble is often developed, by not having a definite and plain understanding with the hired man; when the agreement is made, either the time for which he is hired is not certain, or the specific terms of the agreement are not definitely made, or fully understood by both parties.

3. **Written Contract.**—A written contract with a hired man is not absolutely necessary, but it is always best. To make a bargain orally in the presence of a disinterested party, so that no difficulty may arise in reference to the agreement, is the next best way. An oral agreement made without a witness is always to be condemned.

4. **A Written Account.**—Always have a regular account of a hired man, keeping record of the time he begins work, and the date and amount of money drawn, time lost, etc., and in case of any question as to the settlement, the account book then can be taken into court as evidence. When opening an account with hired men, always state the terms of the contract; state plainly the time for which he is hired, the amount per month, and the date that he begins work; and have the hired man sign it or get him to acknowledge it in the presence of some one, not your wife.

5. **Non-Performance.**—If a man is hired for nine months or for a year for a specified sum, he will be compelled by law to serve his full time, unless he can show



good reasons for not doing so. If he can prove that he has been ill-treated, or the party for whom he works has not properly performed his part of the agreement, then he may stop work at any time and collect the full amount of his services for the time which he has worked; otherwise, if the hired man should leave before he has served his full time on his own responsibility and without good cause, he could not collect wages for the time he has served. But most of the statutes in the different States provide that the laboring man may collect his wages, no matter what the agreement as to time of service might be, but the amount of damages that can be proven against him are taken out of the amount of money his due. If a hired man leaves the man for whom he is at work at a disadvantage, the hired man must pay whatever damage can be proven by his employer.

6. **Hiring by the Month.**—If a man is hired by the month, without any definite time specified, he can quit work at the end of any month and collect the amount his due to date. For instance: If A hires out to B for $20 a month and no specified time is stated as to how long he shall serve, A can stop at the end of any month and collect compensation for the full time he has served.

7. **Compensation for Full Time.**—If a man has been hired for nine months in some certain line of employment and he is discharged without good cause before his time expires, he can collect wages for the entire time for which he was hired. No hired man can be discharged without good cause. It must be shown that he has been unfaithful and failed to meet the terms of the agreement. Unless good cause can be shown he is entitled to the full amount for the entire time he hired out, but he must offer his services and be willing to go on and perform his part of the agreement.

8. **Safe Rule.**—Law-suits are expensive. It is always best to make an agreement in such a way so that no complication can arise between employer and employed. If you hire a man and he is not satisfactory, pay him for what he has done and discharge him, and settle the matter at once and for all time. If a hired man is discontented and does not care to serve out his time, it is best to compromise and pay him off and let him go. The service of a discontented man is never satisfactory, and he who insists on keeping a man against his will is losing money every day. If a man is not willing to perform his part of the agreement, he is not a safe and successful man to keep upon the premises. Ship him without delay and get rid of him at all hazards.

9. **Hire Good Men.**—Hire good men and pay good wages. It is always the cheapest in the end.

10. **Receipts.**—When settling with a hired man or with any of your neighbors, always take a receipt in full.

Take one hundred of our most noted men, and select one hundred of our most popular millionaires, and you will find, almost without an exception, that forty years ago they began life without a dollar, and worked as hired men to earn their first start in life.

THE LAW OF HIRING, LENDING AND BORROWING.

1. **Bailments.**—Bailment is a legal term applied to almost anything that may be borrowed, or loaned, or hired, or placed in trust for other parties. The person delivering the goods is called a bailor, and the party to whom they are delivered or loaned is the bailee. Real estate cannot be brought under this head.

2. **In Trust.**—Goods must be delivered in trust in some form, in order to come under the head of bailments.

3. **Delivery.**—If a horse be borrowed and used, and returned with or without compensation for use; or to be kept and returned at a given time, or when required; or to be shod for the owner; or to be trained or treated for disease, is in law called a bailment. Delivery of a book to be read, or bound, or cleaned, or trimmed, or stored; or the delivery of a watch to be repaired; or the loaning of a wagon, a sleigh, buggy, or any other personal property, are all examples of bailments. Hence the delivery of goods of any kind for any purpose where the party receiving them is not the owner, is a case of bailments.

4. **Required Care.**—The care of borrowed or hired articles that come under the law of bailments are divided into three degrees, as follows:

First, Slight care, or that degree of care which a heedless man exercises over his own things. A failure to exercise this care is gross neglect.

Second, Ordinary care, or that degree of care which one of ordinary prudence takes of his own things. A failure to exercise this care is ordinary neglect.

Third, Extraordinary care, or that degree of care which a very careful man, one of more than ordinary prudence and caution, would exercise concerning his own things. A failure to exercise this degree of care is slight neglect.

5. **Care and Neglect.**—The lines between these different degrees of care and neglect are by no means easily drawn. What is ordinary care, for example, will depend upon the circumstances of each individual case; and whether the bailee or borrower has failed to exercise that care required of him, is a question of fact for a jury to decide according to the evidence. It is plain that the care which would be ordinary if exercised concerning a bag of gold or case of jewelry, would be very extraordinary if exercised toward an iron kettle; and the extraordinary care of a barrel of salt might be very gross neglect of a package of money, if both salt and money were the objects of the same care.

6. **A Deposit.**—Any one who is the owner or lawful possessor of goods may deposit the same, and demand them again; but the owner always has a right to demand and receive them by whomsoever they may have been deposited. If goods are deposited by one legally incompetent to bind himself by contract, the deposit is not good. It must be remembered that in all contracts the legal competency of the parties is essential. All persons under age are not qualified to make a contract. But if they make a deposit of money or property, their parents or guardians can secure the same for them.

7. **The Depositary.**—The person receiving goods on deposit is bound to exercise slight care only if he is not benefited by the deposit, and the benefited party is required to sustain most of the risk; he is liable, however, for gross negligence only.

8. **Delivery on Demand.**—The deposit must be delivered up when demanded, and if the delivery is refused, the depositary is immediately responsible for its safety, and may be required to pay for it on charge of appropriating the property. But if he has been subjected to the payment of expense for the safety of the deposit, he is entitled to reimbursement before delivering up the same. For example, a cask of oil or other liquid is the subject-matter of a deposit, and the hoops had to be renewed to save it from loss. The person in whose care it was placed is entitled to receive the amount of his outlay for repairing the cask.

9. **Loan for Use.**—Loan for use is a bailment of a thing to be used by the borrower without paying for the use of it. In this case of bailment the bailer is called the lender, the bailee is the borrower, and the bailment is called the loan.

10. **Conditions of the Loan.**—First, there must be a thing which lent being personal property. Second, it must be lent gratuitously; for if any compensation is to be paid it is another kind of bailment. Third, it must be lent for use and for the use of the borrower.

11. **Rights of the Borrower.**—The rights of the borrower are strictly confined to the use actually or impliedly agreed to by the lender and cannot lawfully be exceeded. The use may be for a limited time or for a time indefinite.

12. **To Be Specifically Returned.**—The property must be lent to be specifically returned to the lender when the bailment is determined. It is certain that where a thing is "loaned" for consumption, such as flour, it is not a bailment, but a gift or a trade, the equal amount to be returned.

13. **Barter.**—Barter is the exchange of one commodity for another; and the bread that in common language is "borrowed" is really exchanged for other bread which is

to be delivered at a future time. That specific article is not to be returned.

14. **Time and Purpose.**—In general the borrower has the right to use the thing during the time and for the purpose named by the parties, but he must not go beyond or outside that intention in any degree or he makes himself liable. If a horse is borrowed or hired to go to a certain town, no other place may be visited without liability for damages.

15. **Cannot Lend to a Third Party.**—A gratuitous loan is a strictly personal trust, unless from other circumstances a different intention may fairly be presumed. The borrower cannot lend to a third party. If he borrows a horse to ride he must not permit others to ride it. The lender may be willing to entrust his horse to the borrower, but may not feel disposed to entrust it to another party.

16. **Liability.**—The borrower is under obligations to take proper care—extraordinary care—of the thing borrowed; to use it according to the intention of the lender; to restore it at the proper time, and restore it in proper condition. Slight neglect will make him liable, as he alone is benefited by the bailment. He is generally exempt from liability for loss from inevitable accidents, and such as human prudence by extraordinary care could not guard against, such as tornadoes, earthquakes, etc.

17. **Recovery Before the Expiration of the Time Loaned.**—A question now arises whether the lender could demand and recover the thing loaned before the expiration of the time for which it was loaned. The general rule may be stated to be, that as the bailment is without compensation, the lender may terminate it whenever he pleases; but if he does so unreasonably, and it occasions any loss or injury to the borrower, the latter may, perhaps, have a suit for damages where the object of the bailment has been partly accomplished.

18. **Returning Things Borrowed.**—The borrower must return the thing borrowed at the residence or place of business of the lender where he obtained it, or where it naturally belonged. If the lender had in the meantime removed, the borrower would not be required to follow him to return it unless the difference in distance was only trifling.

19. **Must be Returned in Good Condition.**—The thing loaned must be returned in good condition as it was when borrowed, the natural wear excepted. If it were returned very materially damaged the owner may refuse to receive it; but it is otherwise if the damage is inconsiderable. Where the acts causing damage amounts to a wrong done and conversion of the property, the owner may refuse to receive it, and recover the full value of it in an action.

20. **Expenses.**—The borrower will be entitled to recover for extraordinary outlay to preserve or repair the property. If a coach required a new wheel it would be an unusual expense, and would be charged to the lender; while feeding or shoeing a team is an ordinary expense and must be borne by the borrower. The borrower has a lien upon the thing until these extraordinary expenses are paid. The lender could not excuse himself from payment by refusing to receive the property; nor by the subsequent destruction of it; nor by a restitution of it by the borrower without insisting upon payment.

21. **Contract of Hire.**—Contract of hire is a bailment in which the bailee is to use the thing bailed, or to do service about it, for a compensation. The bailor is called the "letter to hire," and the bailee is called "the hirer." By these names we shall distinguish them hereafter.

22. **Essentials of the Contract.**—The essentials of the contract are as follows: There must be the thing in existence which is the subject-matter of the bailment; it should be a thing capable of being let; the bailee should have a right to use, enjoy and possess it during the period for which it was let; there should be a price for the hire; and a contract possessing legal obligations between the parties.

23. **Ordinary Care.**—As the parties are mutually benefited, the borrower is to exercise ordinary care, and would be answerable for ordinary neglect only, as he pays for the use of the article, ordinary care only is necessary.

24. **Must Not Be Prohibited by Law.**—The bailment must be such as is not prohibited by law; as those against sound morality, against public policy, or those positively forbidden. If a locksmith lets tools to thieves and burglars to enable them to enter houses for the purpose of stealing goods, the bailment would have no legal force or existence. The principles governing contracts can be applied here in this case.

25. **The Hire of Things.**—The letter is obligated to deliver the thing to the hirer; to refrain from every obstruction to the use of it by the hirer, during the period of the bailment; to do no act which shall deprive the hirer of the thing; to warrant the title and right of possession to the hirer; to warrant the thing free from any fault or defect inconsistent with the proper use of it; and to keep it in repair for the purpose of the bailment.

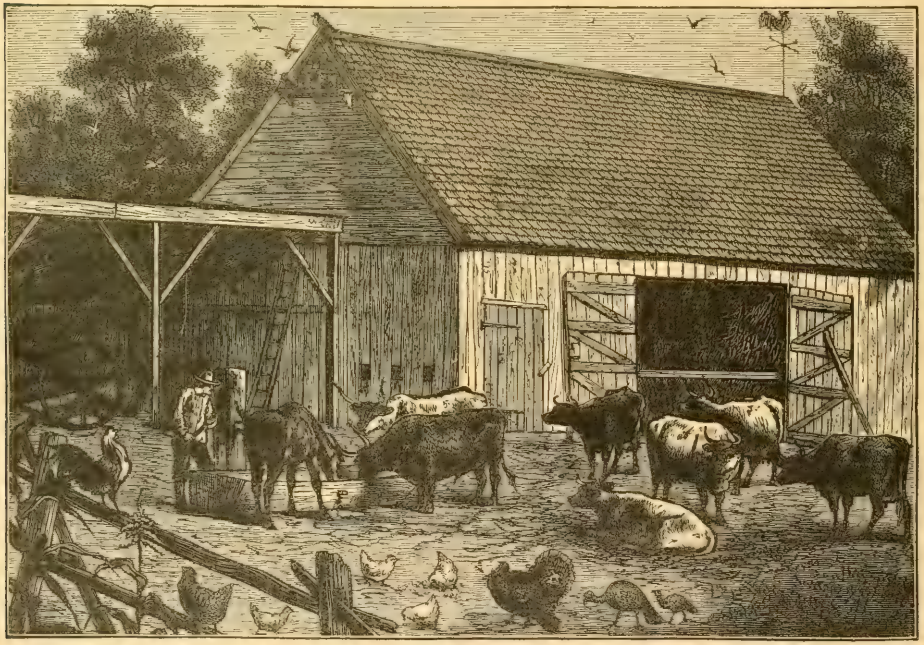
26. **The Obligations of the Hirer.**—The hirer is obligated to use the thing for the purpose of the bailment, and that only; to take ordinary care of it while the bailment continues; to return it when the bailment expires, in as good a condition as when he received it, natural wear excepted; and to pay the stipulated price,

or a reasonable price if none was agreed upon. The hirer is not presumed to break, or injure the thing by using it for purposes contemplated by the parties, with ordinary care unless it was defective. If by the hirer's fault the injury is done, he is to repair it; otherwise not.

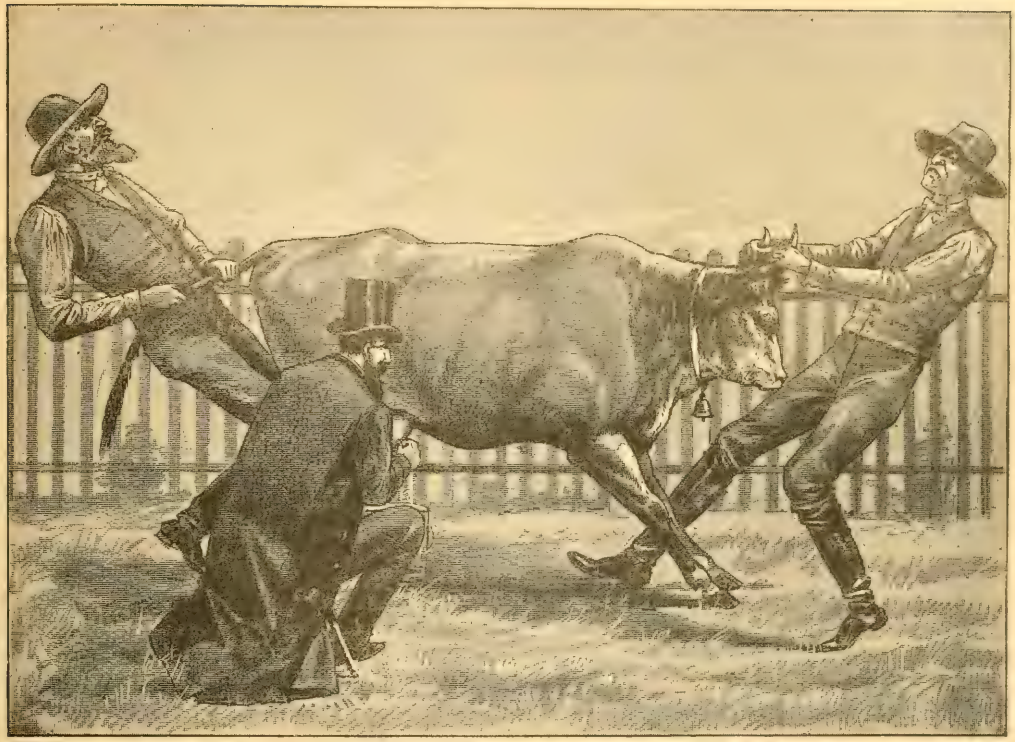
27. **Dissolution.**—The contract of hire is dissolved by the expiration of the time, or the accomplishment of the thing for which the contract was made; by the loss, or destruction, of the thing by inevitable casualty; by a voluntary dissolution by the parties; by operation of law,—as where the hirer became the proprietor by purchase, gift, or inheritance. When this contract is dissolved from any cause, it does not affect the obligation already incurred, but only those that might otherwise be incurred in the future.

28. **The Hire of Labor and Services.**—The parties are called employer and employee. The employer is, in general, obligated to pay the compensation; to pay for all proper new and accessorial materials; to do all on his part to enable the workmen to execute their engagement, and to accept the thing when it is finished.

29. **The Employee.**—The employee is obligated to exercise the skill in any given case required; to perform the labor well and by the time stipulated, or if no time was agreed upon, then in a reasonable time; if materials are put into his hands, to guard them against ordinary hazards, and to exert himself to preserve them from any unusual or expected danger; to deliver the thing about which the service is done, when the same is completed, and in all respects fulfill his legal agreements which may have been made on the premises.



THERE IS ALWAYS PROFIT IN GOOD FARMING.



A LAW-SUIT IN PROGRESS.—This illustrates the Principles and Philosophy of a Law-suit. The two contestants are pulling with all their strength to gain the case, while the lawyer gets all the benefit that is in the trial. The contestants simply hold the cow while the lawyer does the milking.

STOP AND THINK BEFORE YOU SUE YOUR NEIGHBOR.

ARBITRATION.—Or, HOW TO SETTLE DIFFICULTIES WITHOUT GOING TO LAW.

1. **Litigation.**—It is always best for people to avoid and discourage litigation. Law-suits are an expensive luxury, even though the suit is won.

2. **Arbitration.**—When persons refer any matter or controversy to the decision of one or more disinterested persons, it is called arbitration. This act of referring it to other persons is called submission, and the person or persons to whom the matter is left are called arbitrators, and the decision made by them after due consideration is called an award.

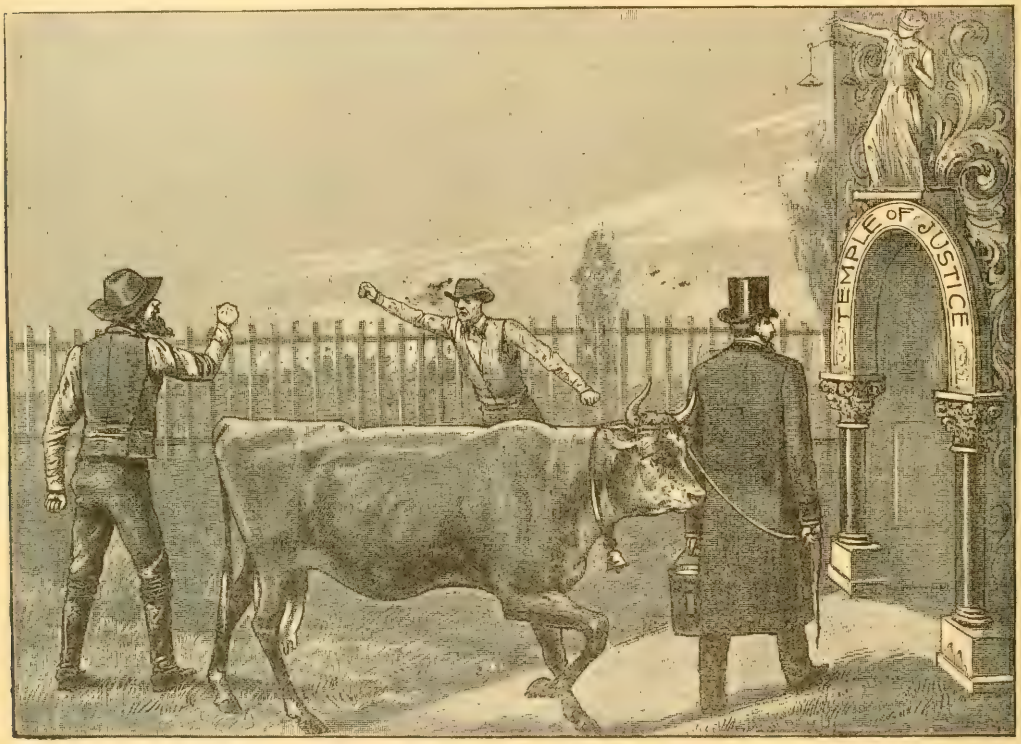
3. **Form of Submission.**—Anything may be the subject of arbitration which is not criminal. Criminal acts cannot be settled by arbitration. The best way to settle difficulties between two parties is for each to appoint one disinterested person, and then the two thus selected appoint a third party, and the three then consider the statement of the contending parties and their witnesses, if any, and after hearing both sides of the case they then can decide upon the terms of an award.

4. **Conditions.**—A court of equity will not compel any person to carry out an agreement to submit the difficulty to arbitrators, but when the difficulty has been once submitted for settlement by mutual consent of both contending parties, the decision of the arbitrators will be held as good and binding, unless some fraud or mistake has entered into the decision.

5. **Compulsory Performance.**—If either party, after the terms of settlement have been announced by the ar-

bitrators, refuses to perform his part, then by law he can be made to carry out the conditions of the award or pay damages for non-performance; and the suit, if brought into court, must be on the non-performance, and not on the original claim. The original claim cannot be tried.

6. **Save Money.**—Do not go to law because you have a little difficulty with your neighbor. Make a proposition to him to leave it out to disinterested parties, and if he will not settle upon these terms, then you have no other redress but a court of justice. But very few men, if they are approached properly, will refuse to leave the points of controversy to disinterested parties, and thereby much time and much money will be saved, and many hard feelings avoided.



AFTER THE LAW-SUIT.—The lawyer takes both the cow and the milk, and leaves the two contestants to fight it out among themselves.

LEGAL RIGHTS AND WRONGS.

1. **Judge Made Law.**—The decisions of our highest courts of final resort are evidences of the law, for there is no such thing as "judge made law." The courts cannot make the law; they simply expound what they find to be law.

2. **The Boast of the Law.**—It is the boast of the law that every wrong has its redress, and this redress is worked out through the agency of implied contracts. If one construction of an implied contract would be frivolous and the other reasonable, the reasonable construction is the one the law would take. The general rule of law is, that no implied meaning will be given where an expressed one has been made.

3. **Gift of a Promissory Note.**—If a father were to give his promissory note for five hundred dollars to his son on account of his great affection and regard for the

son, this note in the hands of the son could not be collected in any court of justice against the father, because the note, being an executory contract, was not based upon a valuable consideration, and therefore was invalid; but if the son were to sell it to an innocent third person, for value, such innocent purchaser for value, could enforce collection against the father.

4. **Place for the Signature.**—The party's signature is usually written at the close of the memorandum, but not necessarily so. It may be placed anywhere; at the end, in the middle, (except in a State where the statute requires the word subscribed instead of signed, as in New York), and, indeed, it may not necessarily be his name written in full, but his initial or any mark that he may recognize as his signature. A written offer, verbally accepted, is binding upon the signer, but not upon the party who does not sign.

5. **A Guaranty.**—Where there is a special promise to answer for the debt, default or miscarriage of another person, this too, must be in writing. This promise is commonly called a guaranty. In this there is no particular change from the common law, beyond the fact that the contract must be in writing.

6. **Object of the Law.**—The law vouchsafes to every man life, liberty, and the consequent pursuit of happiness. True liberty consists in a man's doing whatever he pleases to do, so long as he does not please to encroach upon the rights of other persons.

7. **Intention of the Parties.**—Where there is a doubt as to the principal meaning of the contract, the court, if possible, will follow the acts of the parties themselves in determining the meaning. If words are intentionally made ambiguous, and the court discovers that it was done for that purpose, the parties so offending will not be benefited by it. The true principle of ethics is not to encourage such wrong-doing.

8. **Presumption of the Law as to Damages.**—When a contract has been fairly entered into, each party is legally bound to perform his part of the contract; or, to answer to the other for damages, according to the nature of the failure of the performance. Since the law presumes that every man intends to perform his obligation, it follows that if he does not do so, he must pay damages; for the language of the law is: "Perform your contracts or pay damages."

9. **To Be Determined with Fairness.**—The damages naturally, therefore, will be determined with all fairness to both parties; the law fully investigating the nature of the non-performance, whether it resulted from gross carelessness, or indifference, or whether it was a case of absolute necessity. The law, in no instance, however, will allow oppressive or vindictive damages.

10. **Contracts for the Performance of Personal Service.**—If an employer should dismiss or discharge his employee without a just cause or provocation, the employee so discharged has a right to recover damages for whatever loss he may sustain by such discharge and the consequent lack of employment.

11. **Flooding Adjacent Lands.**—Damages are also awarded to persons for injury to their real property as well as to their personal property. For instance, the backing up of water by raising embankments, levees or dams, or anything of that nature, and thus flooding adjacent lands and rendering the location unhealthy, besides producing malaria and other bad effects. In all such instances damages are awarded commensurate with injury brought to the property of the said plaintiff.

12. **The Effect of Part Payment.**—All actions on book accounts can be brought for indebtedness within the terms of limitation under the statutes of the State where the suit is brought.

RULES FOR BUYING REAL ESTATE.

1. **Abstract.**—Demand a complete Abstract of Title. Make the party selling the land furnish the abstract.

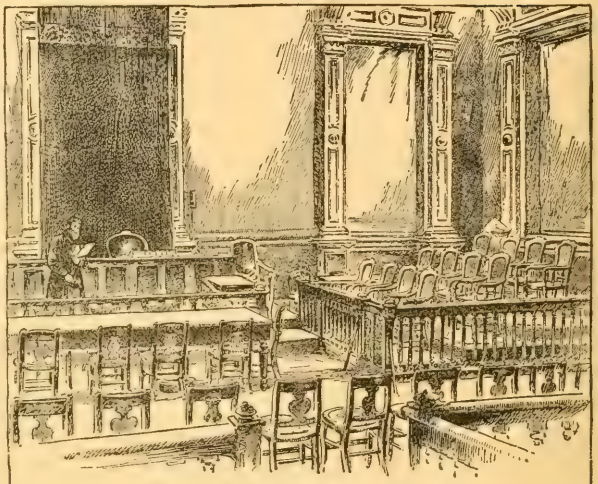
2. **Have the Abstract Examined.**—Secure a good competent lawyer to look over the abstract. Make a contract with the party selling the land to pay for looking over the abstract. The party selling the land or real estate, should pay all expenses for making the abstract and for examination.

3. **Putting on a Mortgage after Abstract Has Been Given.**—See that the party selling the land does not put on a mortgage on the property after the date of the abstract that he has furnished. Every seller of real estate can secure an abstract, and the next day record a mortgage against the property.

4. **Signing of Deed and Expenses.**—Every deed must be signed by the party selling the land, and if he is married also by his wife. This must be done in presence of a notary. The expense of making out a deed, etc., must be paid by the party selling the land; the recording of the deed is, however, always at the expense of the purchaser.

5. **Taxes.**—If a purchaser buys land after the same has been assessed, then the taxes must be paid by the seller. If the land is purchased before the taxes are assessed or levied, then the taxes must be paid by the purchaser.

WHAT A DEED TO A FARM INCLUDES.



The United States Supreme Court Room.

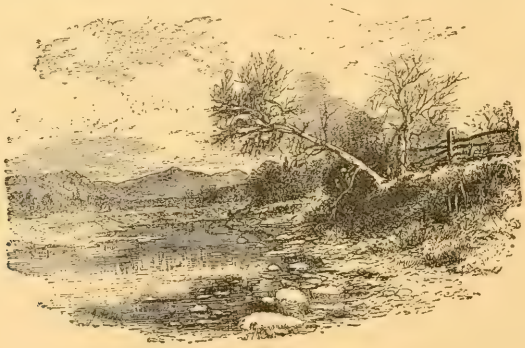
1. **Fences, Etc.**—Everyone knows that it conveys all the fences standing on the farm, but all might not think it also includes the fencing stuffs, posts, rails, etc., which had once been used in the fence, but had been taken down and piled up for future use again in the same place. But new fencing material just bought and never attached to the soil would not pass. So piles of hop poles stored away, if once used on the land, and intended to be again so used, have been considered a part of it; but loose boards or scaffold poles merely laid across the beams of the barn and never fastened to it, would not be, and the seller of a farm might take them away.

2. **Standing Trees.**—Standing trees, of course, also pass as part of the land; so do trees blown down or cut down, and still left in the woods where they fell, but not if cut and corded up for sale; the wood has then become personal property.

3. **Manure.**—If there be any manure in the barnyard, or in the compost heap on the field, ready for immediate use, the buyer ordinarily, and in the absence of any contrary agreement, takes that also as belonging to the farm, though it might not be so if the owner had previously sold it to some other party, and had collected it together, in a heap by itself, for such an act might be technical severance from the soil and so convert real into personal estate, and even a lessee of a farm could not take away the manure made on the place while he was in occupation.

4. **Growing Crops.**—Growing crops also pass by the deed of a farm, unless they are expressly reserved; and when it is not intended to convey these, it should be so stated in the deed itself; a mere oral agreement to that effect would not be in most States valid in law. Another mode is to stipulate that possession is not to be given until some future day, in which case the crops or manure may be removed before that time.

5. **Buildings on the Farm.**—Buildings on the farm, though generally mentioned in the deed, it is not absolutely necessary they should be. A deed of land ordinarily carries all the buildings on it belonging to the grantor, whether mentioned or not; and this rule includes the lumber or timber of any old building which has been taken down or blown down, and packed away for future use on the farm.



AGRICULTURE AND FERTILIZING

By Prof. G. W. Carver, M. Ag.

1. **Agriculture.**—There is probably no subject in which so many people are alike interested, as that of Agriculture; and no problems more vexing than those which relate to the how, when and what kind of fertilizers to apply, their retention and utilization after application. This applies particularly to the South, as many thousand dollars are expended every year for some form of fertilizer, a large percentage of which is carried away by our frequent heavy rains, which are assisted in their work of destruction by the improper preparation of the seed bed, bad planting and wrong cultivation.

With the rapid decomposition of organic matter, (vegetable matter), physical and mechanical conditions of the soil, heavy rainfall and the great multiplicity of insect and fungus diseases, with which we must combat, I am fully convinced that it requires more brains to farm successfully in the South than it does in the North, East or West. I think, however, there is no section in the United States that possesses more natural advantages, such as an equitable climate, unusually responsive soils, beautiful natural shrubbery, and a location so varied that the most fastidious home seeker may be suited.

2. **Fertility of the South.**—For many years after the settlement of the South it was recognized as one of the most fertile spots known to the new world, which was doubtless true, but the exhaustive system of cultivation, (or rather the lack of system) for the many years which followed has not only left the soil chemically poor, but physically as well. The all absorbing question now is, how may we bring back or restore this virgin fertility? The farmer who is so skeptical as to think that this cannot be done, is not fit to husband one of God's greatest blessings to man.

3. **Vital Principles.**—There are a few vital principles every farmer must know if he expects to be the most progressive, viz; The condition of the markets in order to dispose of his products to the best advantage; he must also know something about the laws governing plant growth; why one thrives in sunshine, another in shadow; why some require a great deal of moisture and others so little.

The rational feeding of animals must not be overlooked. As he must know just the kind, quantity and quality of food required to form fat, heat, milk, bone, hair, wool, and muscular tissue.

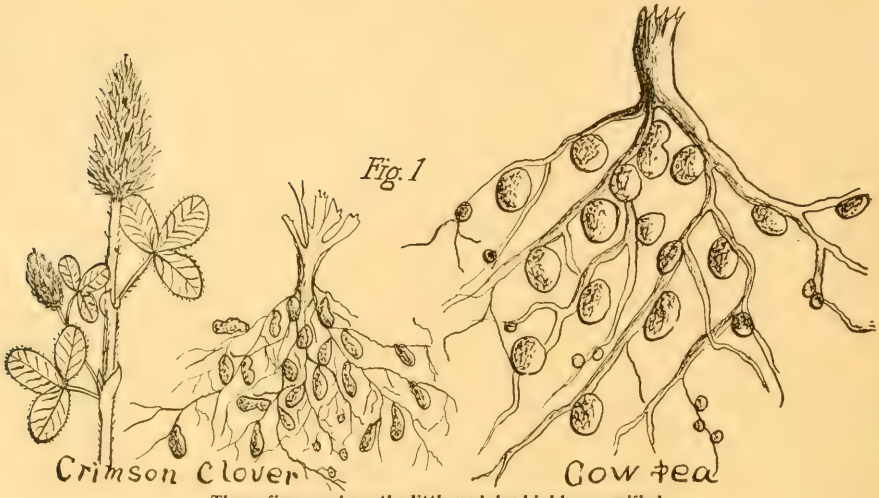
4. **Farming a Profession.**—With the myriads of insect enemies and plant diseases, with which he must fight, the study of entymology (the science and description of insects) and botany must not be neglected. Farming is a profession and means progress in almost every manipulation; the agriculture of today is no more to be compared with the agriculture of one hundred years ago, than the tallow dip candle, of about that age, is to be compared with the present electric light, and we dare not even conjecture the developments of another century.

Farming, then, is really a scientific study, one in which the natural historian delights to revel. Another element that greatly retards our progress is the old and popular notion that "Any fool can farm." Now, this is wrong; no fool should be asked or expected to go out and perform successfully a task requiring so much active brain power.

5. **Unfruitful Soil.**—The lapse of time and methods of cultivation has rendered much of our soil physically and chemically unfruitful, not because the elements of fertility are wholly gone, but in a state or condition that the plant cannot use them, hence we shall now discuss the ways and means of overcoming these difficulties.

With every rain a certain amount of plant food, originally contained in the soil or applied in the form of fertilizers is brought into solution, if such food is ready to be taken up by the plant. This is frequently carried away and lost because the soil is not in the proper condition to absorb and retain these liquid substances.

The retention of these substances is accomplished in several different ways, but I will give only the three most simple and practical: First, by rendering the soil porous by deep plowing which should be done as a rule only in the preparation of the seed bed. Second, by the introduction of organic matter (vegetable matter) into the soil which acts much as a sponge in the presence of moisture, rapidly absorbing it, and of course, all fertilizers held in solution. In this way large quantities of plant food is held ready for use that would otherwise be washed away and lost.



These figures show the little nodules highly magnified.

Third, chemical fixation; by this we mean that certain chemical substances which are very soluble in water, when mixed with other substances form a compound that is not nearly so easy to dissolve in water, but quite fast enough in the soil for the use of the plant.

6. **Von Liebig's Laws.**—Heat, light, air and moisture are essential to the development of all agricultural plants. A little more than fifty years ago the illustrious German chemist, Justus VonLiebig, set forth four laws that form the basis of modern agricultural practice. They are as follows:

First, "A soil can be termed fertile only when it contains all materials requisite to the nutrition of plants, in the required quantity and in the proper form." Second, "With every crop a portion of these ingredients are removed. A part of their portion is again added from the inexhaustible store of the atmosphere; another part, however, is lost forever if not replaced by man." "Third, "The fertility of the soil remains unchanged if all the ingredients of a crop are given back to the land. Such a restitution is effected by manure." Fourth, "The manure produced in the course of husbandry is not sufficient to maintain permanently the fertility of a farm; it lacks the constituents which are annually exported in the shape of grain, hay, milk and live stock."

In these four laws of Liebig we have a clear statement of the fundamental principles governing the use of fertilizers. It is not sufficient to merely read the laws over once or twice, but they must be studied carefully if the greatest good is to be derived. Furthermore it is highly important that we know something of the constituents of plants and their relationship to both the air and the soil.

7. **Chemical Elements that Concern the Farmer.**—Of the seventy chemical elements of which all matter is composed more or less, there are only fourteen of special interest to the farmers, as the others seem in no way to be essential to plant life. These elements are divided for convenience into two great groups, elements or substances derived from the soil and elements derived from the air. Of the first group we have:—Phosphorous, Potassium, Sodium, Magnesium, Iron, Chlorine, Silicon, Manganese, Sulphur and Calcium. Of the second group we have:—Nitrogen, Oxygen, Carbon, and Hydrogen.

Of all these constituents nitrogen is the most expensive—costing from 14c to 16½c per pound, and is difficult to hold in the soil, owing to the readiness with which it is dissolved by water. Since nitrogen is such a necessary element of plant growth, so difficult to retain in the soil and a matter of so much financial importance, we need to look more deeply into its sources and methods of retention. We find it combined with various substances forming nitrates, such as nitrate of soda, nitrate of potash, etc., also in ammonia which is formed when any animal or vegetable substance containing nitrogen decomposes.

There are other forms of nitrogen in both plant and animal substances, but the three just mentioned represent the forms it must assume before the plant can use it as food.

Out of those three different sources two must be bought, the other may be had by planting a class of plants which have the power to draw this nitrogen from the air and store it away in specially arranged bodies found on the roots of nearly or quite all plants belonging to the peas, vetches, clovers, beans, alfalfa, etc. All such plants are called leguminous and bear little swellings on the roots, called nodules, in which this nitrogen is stored ready for use by the plant. (See Fig. No. 1.)

The wise and progressive farmer ceases to buy such large quantities of these expensive nitrates, but plants his leguminous crops, permitting them to bring this to him, and at the same time reap a valuable crop in the way of fodders, seed or green manure.

I know a piece of land owned by the Tuskegee Normal and Industrial Institute—a very light sandy soil, underlaid by red clay sub soil, which was too poor to grow peas upon—in 1897 crimson clover was planted. It did fairly well in spots only. In 1898 (March 28th) they cut 1150 pounds from one-fourth of an acre. In about 3 weeks it will be ready to cut again, then plowed under and followed by cow peas. In a very short time, by this method, corn or cotton might be raised without additional nitrates of any kind.

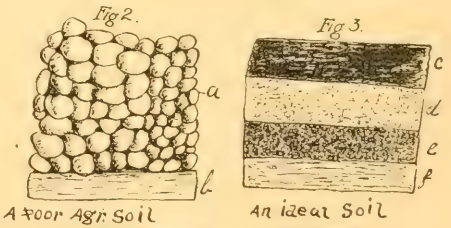
This clover was fed to the dairy herd which increased in milk nine gallons and in a superior quality of butter contents ten pounds. This class of plants will do much toward the redemption of our Southern soil.

8. **Nitrogen, Phosphoric Acid and Potash** are the three substances for which we make the greatest annual outlay, and are divided into three great classes. 1. Available or soluble. 2. Nonavailable or insoluble. 3. Citrate soluble. When solubility is referred to water is always meant, unless otherwise stated. When we say a fertilizer is available we mean that it dissolves easily in water, like salt, sugar, etc., and is therefore ready to be taken up by the plant. Nonavailable, just the opposite.

By citrate soluble we mean that the fertilizer in question will not dissolve in water alone, but will yield readily to citric acid or weak vinegar. Considerable thought is used in the preparation of these fertilizers, hence one must use much wisdom in their selection and application.

The farmer who is more or less nomadic, moving from place to place every year, cannot afford to buy anything but readily available plant food, so as to get results the first year.

9. **Application of Fertilizer.**—The character of the land as well as the nature of the fertilizer should govern its application. Much of our soils are in the same condition as that shown in Fig. 2. Here the soil is simply sandy all the way down to the water table, hence much decayed vegetable matter should be worked in and the allotted amount of fertilizers not put on all at one time, but in two or three applications, as the case demands, lest much of it leach through and be lost forever. Vegetable matter in the soil acts much as a sponge in the presence of water, absorbing it and of course the fertilizer contained therein, rendering them less liable to be washed away by frequent heavy rains. Fig. 3 shows a soil underlain with a clay subsoil. This is the most desirable, as the clay structure will hold the fertilizer and capillary attraction (the upward movement of water) will bring them within reach of the plant again. Before applying any manure the ground should be turned over in the fall to the depth of six or eight inches, just as soon as the crops can be gathered from it, for the following reasons:—1. To kill injurious insects, weed seed and fungus diseases. 2. To put the grass and debris under the ground to decompose and become ready for plant food in the spring. 3. To let the air and frost into the soil, the securing of a better seed bed; the building up of the soil; and the bringing back of some of the fertilizer that has sunken below the agricultural depth.



a. Sandy soil highly magnified. c. Top soil or homus. d. Clay subsoil. e. Sand. b and f. Water table.

10. **The Successful Farmer** must be a careful student of the soil. There is only one way for a person to become master in any profession, and that is by earnest study and close application. This is doubly true of the farmer; he must learn to look and prescribe for his plants with as much certainty as a skillful physician prescribes for his patients; he must learn when the physical and mechanical conditions of the soil are good and the plants continue pale green in color nitrogen is needed. 2. If vigorous in growth of leaf and stem, leaves deep green, etc., nitrogen is not needed. 3. If such crops as turnips, cabbage, collards, potatoes, grasses, cane, corn, etc., show a

fine healthy growth, sufficient potash is present in the soil. 4. Unusually large stems and leaves, with few flowers, imperfect fruit low in flavor, and if root crops, such as potatoes, you only harvest small and inferior tubers with poor keeping qualities, then too much nitrogen is present in proportion to the other fertilizing ingredients. 5. The office of phosphoric acid seems to be that of perfecting the seed, or grain, and when the seed appears plump and vigorous the above element is not wanting in the soil. 6. Potash, though essential to the highest development of all agricultural plants, it occupies first place in the development of all those producing sugar.

11. **Sandy Land and Hot Climate.**—Our extremely sandy land and hot climate has made the subject of green manuring or the plowing under of green crops, such as peas, clovers, etc., of considerable anxious comment. Some have gone so far as to recommend their discontinuance altogether, the souring of the land being the objectionable claims. This is quite true, as all plant juices, with but few exceptions, are acid and hence impart this to the soil when turned under. This may be readily overcome by a light application of lime scattered broadcast at the rate of twenty to thirty bushels per acre, according to the nature of the soil; it should be thoroughly air slacked, spread evenly and burrowed in if the crop is to be put upon it at once; otherwise it may be spread on freshly burned and serves to render available potash, soda, etc., that are unavailable, besides assisting in the decay of vegetable and animal matter that may be present in the soil. It is not good economy to plow under a great crop of green forage when the land is fairly well supplied with vegetable matter, as it is worth so much more for food. Millions of dollars in food stuffs might be saved every year, the soil physically, mechanically and chemically improved, were the destructive forest fires held in check which devestate our woodland and fields every year and their vegetable matter on tillable lands plowed under in the fall and permitted to convert itself into plant food for the next year's crop, besides giving to the land valuable vegetable absorbants to hold what fertilizers we are obliged to apply. True, burning this matter returns a little potash to the soil, but this potash can be bought and applied for about one-twentieth the cost of other valuable materials we destroy. Should the farmer burn a brush heap and find that vegetation is ranker and better there than else where, it indicates that potash is needed. The above mentioned fires are among the greatest curses to Southern agriculture and should be speedily remedied.

12. **Useful Tables and Suggestions.**—I submit the following compilation of tables and suggestions with no small amount of apprehension, lest the careless, blundering reader will interpret them wrongly. They are not infallible rules, but in a very general way apply to all ordinary soils. Particular ones must be studied and their wants supplied according to their several deficiences, and the special demands of the crop to be grown upon them.

These tables all represent per centage and mean so many pounds of the fertilizer in question, as indicated per figure, in every 100 pounds of the substance; thus, cotton seed meal containing six per cent nitrogen=.06x100 pounds=6 pounds nitrogen. Some of the principal materials containing nitrogen, approximately given are as follows:

MATERIAL.	PER CENT NITROGEN.
Cotton seed meal	6 to 7
Dried blood	10 to 15
Dried fish	8 to 9
Hair	14 to 16
Horn and hoof dust	10 to 15
Leather meal and scrap	7 to 8
Nitrogeneous guanos	7 to 8
Wool waste	6 to 7
Ammonia sulphate	20 to 21
Nitrate of soda	15½ to 16
Potassium nitrate	13 to 14
Muriate of ammonia	25½ to 26½

Sources of phosphoric acid approximately given, only the availabe or soluble forms are here mentioned:

MATERIALS.	PER CENT.
Bone meal (dissolved)	12 to 18
Bone meal (from glue factories)	6 to 8
Thomas slag (American)	7 to 7½
South Carolina rock (dissolved)	12 to 12½
Peruvian and Mona Island guano	7 to 8
Keystone concentrated phosphate	35 to 40

Sources of potash approximately given:

SUBSTANCES.	PER CENT.
Murate of potash (high grade)	50 to 53
High grade sulphate of potash	48 to 52
Low grade of the same	29 to 30
Waste from powder works	16 to 18
Unleached wood ashes	5 to 8
Same leached	1 to 3½
Kanit	12 to 14
Nitrate of potash	43 to 44

13. **Barnyard Manure.**—I feel that too much emphasis can hardly be placed upon this most important topic. From Farmer Bul. 21, U. S. Dept of Agriculture, we clip the following statement: "Aside from the mechanical benefits to the soil barnyard manure, according to Prof. Roberts' conservative estimate, is worth $250 for every small farm carrying 4 horses, 20 cows, 50 sheep and 10 pigs."

We can safely assume that one-third of the manureal

STABLE MANURE.

An average tenant's stable and his method of saving manure. All the fertilizing properties are being washed away.

Any one can build a rude shed. The piles of manure should be given only water enough to rot the heap.

value of our home product is lost by bad management. Accorbing to Prof. Roberts' figures the annual loss for each farm would be $83.33.

According to Armsby, the farmer who sells one ton of cotton seed meal from his farm sells the following amount of fertilizing ingredients:

PRODUCTS.	POUNDS PER TON.			VALUE PER TON.			TOTAL.	MANURED VALUE OF $10 WORTH
	NITROGEN.	PHOS. ACID.	POTASH.	NITROGEN.	PHOS. ACID.	POTASH.		
Cotton Seed Meal...	136.65	29.2	56.2	$23.06	$2.04	$2.25	$27.35	$10.12
Corn.....	33.6	11.8	7.4	5.62	0.83	0.30	6.75	3.78
Clover Hay	40.16	11.2	36.6	6.83	0.78	1.46	9.07	9.07

From the above figures we see that he who sells a ton of cotton seed meal sells nearly or quite twenty-eight dollars worth of fertilizer. Every farmer should set about at once to save this enormous waste of valuable plant food.

The average barn yard manure is found to vary about in this proportion:

Nitrogen..... 0.4 to 0.75 per cent.
Phosphoric acid..... 0.2 to 0.40 " "
Potash..... ..... 0.4 to 0.75 " "
Water.....70 to 80 " "

As to the quality of stable manure to be applied, no fixed rule can be laid down, as the quality of manure, character of the soil and the kind and quantity of crop to be grown will govern. (The above is true of all fertilizers.)

In New England States and the west from 6 to 12 tons are applied with good effect, while many soils in the south require 18 to 20, and even more in extreme cases.

14. **Fertilizers Recommended for Different Crops.**—The following amounts of phosphoric acid, nitrogen and potash is recommended for the following crops on ordinary soil.

COTTON delights in a sandy soil, rather level in character, with plenty of well rotted vegetable matter (Humus), from 500 to 900 pounds per acre of a fertilizer containing:

Nitrogen.....2 per cent.
Potash.....3 " "
Available phosphoric acid.....8 " "

On very sandy soil, deficient in potash, 4 per cent. of this substance should be added.

CORN delights in a sandy loam with sufficient sand to render it porous, together with a large amount of humus (vegetable mould). It is especially fond of

sod land, and a sod of meadow grass or clover, upon which farm manure has been used during the previous year as a top dressing. If a good crop of clover has occupied the land for two or three years no additional nitrogen will be needed.

About 550 pounds of fertilizer per acre is required on our southern soils.

Nitrogen	2½ per cent.
Potash	10 " "
Available phosphoric acid	8 " "

The average width of planting is 4½ feet apart and thinned from 20 to 24 inches in the row. On our light sandy soils in the south better results as a rule may be obtained by giving it more room.

Crimson Clover may be sown in the fall among the corn, and in addition to that of holding the soil together and bringing nitrogen to it, a valuable pasture may be had during the winter.

Watermelons, Cucumbers and Cantaloupes all prefer a well drained sandy loam and a liberal amount of food, about 1200 pounds per acre:

Nitrogen	3 per cent.
Potash	8 " "
Available phosphoric acid	8 " "

Small holes should be dug, these filled with good leaf mould from the forest. A handful of the above fertilizer well mixed should be scattered over the leaf mould, cover with soil, scatter the seed over this and cover. Thin to two plants to a hill. Cotton seed meal is especially desirable as a source of nitrogen for melons.

Cow Peas thrive on any kind of land, but prefer a sandy soil. Four hundred pounds of fertilizer should be used:

Potash	10 per cent
Available phosphoric acid	10 " "

Sugar Cane (Ribbon) requires rich sandy bottom soils with plenty of vegetable matter in them. Canebrake land is excellent. Ordinarily seven hundred and fifty pounds to the acre is sufficient. All fertilizer containing chlorine should be avoided, also fresh stable manure. The following amounts are recommended:

Nitrogen	3 per cent
Available phosphoric acid	8 " "
Potash	10 " "

Heavy wet soils are greatly benefitted by an occasional depressing of lime, from thirty to forty bushels per acre.

Sweet Potatoes thrive best in a warm sandy soil. The ground should be plowed deep, from six to eight inches, harrowed and pulverized well. 550 pounds of the following fertilizer is recommended for ordinary soils:

Nitrogen	4 per cent
Available phosphoric acid	7 " "
Potash	9 " "

If potatoes have been grown on the same piece of land for several years, it becomes what is known as "potato sick" and does not produce well. They should be changed and some other crop planted instead. Sweet potatoes require only a small amount of nitrogen, and if they are to follow a fall plowed sod, little if any nitrogen is needed. Phosphoric acid and potash are the two principal ingredients for sweet potatoes.

SPOT DISEASES OF COTTON.

REMEDY:—a. Prepare a good deep seed bed. b. Select healthy seed. c. Give plenty of potash and phosphates. d. Keep free from weeds. e. Plant on well drained land. This applies to all spot diseases of cotton.

15. **The Result of Correct Farming.**—In 1897 the experimental station at Tuskegee experimented with sweet potatoes taking their poorest soil. (So poor that cow peas would not grow upon it.) A great many different fertilizers were used mixed in different proportions, but the best result was obtained by applying 600 pounds acid phosphate and 120 pounds murate of potash to the acre. This acre produced 265 bushels to the acre of very fine uniform potatoes. The acre that was not fertilized produced forty bushels of inferior potatoes. The land was prepared as stated above and the potatoes planted practically flat, which conserved (saved) the moisture, the deep plowing turned up latent fertility and made a good reservoir for holding water, besides a sufficient depth of mellow earth, favorable to the highest development of the potatoes.

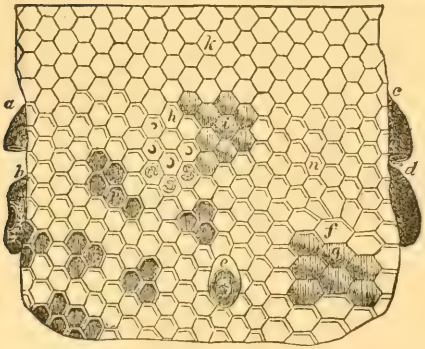
In conclusion we will say that no formulas or set of them are infallible, and are valuable only as suggest-

ive guides. As above stated, the kind, character, and nature of both soil and crop will largely govern. Although it is safe to conclude that the smallest amount of available plant food one may expect to use advantageously would be forty-five pounds, viz: Nitrogen nine pounds, phosphoric acid 15½ pounds, potash 20½ pounds.

16. **Select Good Seeds.**—The selection of seed is of quite as much importance as any of the various manipulations relative to a good crop. Poor seed means a scanty harvest however careful and diligent one may work afterwards. The farmer should select his seed with wisdom and care, rejecting all that appear shriveled and faulty in any way. Do not select seed for next year's crop from plants that are rusted badly or that are diseased in any way. If cotton seed is wanted select from the stalks that mature the greatest number of balls, have the longest and finest lint, and the most free from disease of any kind.

17. **How to Test Seed.**—A glass dish, tumbler, or any vessel that will hold water will answer. Dampen some cotton, spread it out thinly over the surface of the water. Sprinkle the seed upon it to be tested, keep in a warm place and they will soon germinate.

Prof. J. L. NICHOLS, A. M.



P, Q AND OTHER SIDE CELLS ARE QUEEN CELLS.

HATCHING.

The eggs remain unchanged for three or four days. They are then hatched, the bottom of each cell containing a small white worm, which floats in a whitish transparent fluid, which is deposited by the nursing bees, and by which it is probably nourished. It gradually enlarges until its two extremities touch, which forms a ring. It continues to increase during five or six days, until it occupies the whole breadth and nearly the length of the cell. The nursing bees now seal over the cell with a light brown cover. As soon as the larvæ is perfectly enclosed, it begins to line the cell by spinning around itself a silky cocoon. When this is finished it undergoes a great change, from the grub to the nymph or pupa state, and does not bear a vestige to its previous form. It has now attained its full growth, and the large amount of nutriment taken serves as a store for developing the perfect insect.

THE CULTURE OF BUCKWHEAT FOR BEES.

Buckwheat is valuable as a honey plant, as it can be made to bloom when there would otherwise be a dearth of flowers. We have found in our experimental beds that the Silver Hull variety has more flowers in the panicles, and yields more to the acre. The honey is dark, but is preferred to all other kinds by some people. It blooms from four to six weeks after sowing It is safe in estimating that each acre of buckwheat sown within one and one-half miles of an apiary is worth $100.

THE WORKER BEE.

The worker bee is an imperfect or undeveloped female bee, and forms the bulk of the population of a hive. A hive may be large or small—may be 15,000 or 50,000 workers, more or less, just according to the season. The workers gather all the honey, pollen and bee-glue, carrying the latter in little baskets on their thighs, the former in little sacks, sometimes called the first stomach. They secrete the wax from honey, feed the young, clean the hive, and, we might say, do all the work except lay the eggs. They are short-lived, on an average in the working season being only two months. But in winter, when they are idle, they sometimes live six months, or even longer.

THE DRONES.

The drones are the male bees of the hive, and their only use is to fertilize the queens. This always takes place when on the wing. The queen never leaves the hive except for the purpose of meeting the drones or lead of a swarm. The less the number of drones in a hive the better, as they are idlers and useless consumers of honey. The bees kill them off when swarming is over, or honey harvest fails. The drones have no stings.

BREEDING.

After the queen deposits the egg it takes an average of about twenty-two days before the worker comes forth a perfect insect. About twenty-five days are required from the laying of the egg to the hatching forth of the drone. The time for the development of the queen is only sixteen days from the laying of the egg.

SWARMING OF BEES.

It is generally supposed that a hive will not swarm until most of, if not all, the cells are so filled that the queen has no place to lay her eggs, and as this is not apt to happen unless bees are gathering honey freely, it is useless to look for swarms, particularly in the spring until warm, dry weather, as either cold or wet weather is unfavorable for the secretion of honey. Swarms seldom or never issue until at least one queen cell is capped over.

Those using the removable comb hive can by examining the frames every few days tell almost to a certainty when to expect a swarm, though occasionally bees will change their minds and permit the queen to destroy the royal cells.

No rattling of pans or any other noise is needed to make a swarm settle; in fact, I never was able to satisfy myself that throwing dirt or water among the bees ever had any tendency to make them settle, though others think it will.

The sooner bees are hived after clustering the better the chances are of their remaining with you.

Hives need no rubbing with leaves or salt to induce bees to go into them; be sure they are clean and free from cobwebs.

There is another thing very necessary, the lack of which has caused the loss of many a swarm of bees, and that is a cool hive.

After hiving a swarm put the hive on a ventilating bottom board; it should not be raised as bees are more inclined to remain in the hive if the ventilation is from below, and the entrance the only place they can get out. The hive should be well shaded, and in very warm weather sprinkling or syringing with water frequently will help keep the hive cool, and of course have a tendency to make the bees satisfied with their new home.

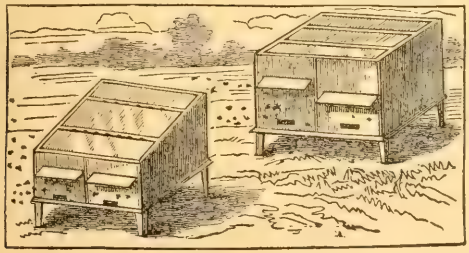
Occasionally a swarm will leave a hive when it seems as if all had been done to keep them that could be. If a swarm appears determined to "secede," put a box of honey on it, shut it up on its ventilating bottom board, and take it into the cellar, keeping it there four or five days; it might be well to give water by putting a dish full under the bottom board and pressing it up to the wire screen, then the bees can help themselves.

We never knew a swarm desert a hive after remaining in it four days (unless an accident happened such as melting down the comb); by that time there is a brood which bees will seldom leave.

It may be necessary to explain what a bottom board is; it is simply a bottom board with a six or eight inch square cut out of the center and a wire cloth tacked over it.

HOW TO DESTROY THE BEE MILLER.

To a quart of water, sweetened with honey or sugar, add a gill of vinegar, and set it in an open vessel on the top or by the side of the hive. When the miller comes in the night he will fly into the mixture and be drowned.



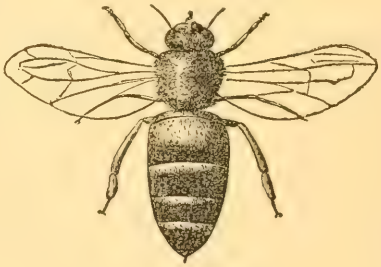
COMMON HIVES.

HOME LESSON IN BEE CULTURE.

1.—Fundamental Points in Bee Keeping. There are four fundamental points which render bee-keeping a success, viz., the man, the movable comb hive, the season and the honey machine. The operator should be acquainted with and understand the nature and working of the bee to enable him to manage them properly. He should then have a hive that will answer all his needs in every department of bee culture, and in the making of hives should aim at simplicity. The honey machine is acknowledged by all bee-keepers to be the greatest improvement to the science since the invention of the movable comb hive, by the use of which we claim to double and even treble the quantity obtained by the old method.

2. What Constitutes a Swarm of Bees.—Every prosperous swarm of bees must contain one queen, several thousand workers, and a portion of the year a few hundred or even thousand drones. We will now proceed to describe the different bees which constitute a swarm, and the labors of each.

3. Description of the Queen.—The accompanying cut will illustrate the appearance of the most important member of this industrious colony. The queen is the only perfect female bee in the colony, and hence the name of queen or mother bee. In form, she is longer than either of the other species. She is usually of a dark color, except the under side of the abdomen, which bears somewhat on the golden shade. All her colors are bright and glossy, and she has but little of the down or hair seen on the drones or workers. Her wings are short, reaching a little more than half way back. Her posterior is more pointed, and has the appearance of curving under more than that of the workers. She has a sting, but never uses it except in combat with a rival queen.



THE QUEEN BEE.

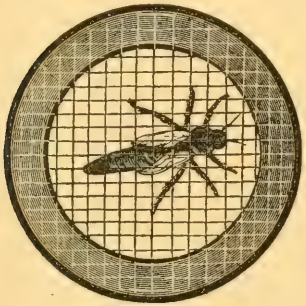
4. Their Affection for their Queen.—The queen is always treated with the greatest affection by the bees. If she is removed from them, the whole colony is thrown into a state of the most intense agitation. All labor is abandoned, and the bees run wildly over the comb, and rush from the hive in anxious search for their beloved mother. If they cannot find her, they return to their desolate home, and manifest, by their sorrowful tones, their sense of this great calamity, as

no colony can long exist without the presence of the mother bee.

5. The Age of the Queen.—The average age of the queen is about three years. No one should be allowed to become older than that, as after that age they often become barren, or deposit eggs which produce only drones, and the colony soon wastes away without being replenished with worker broods.

THE WAILINGS OF THE QUEEN.

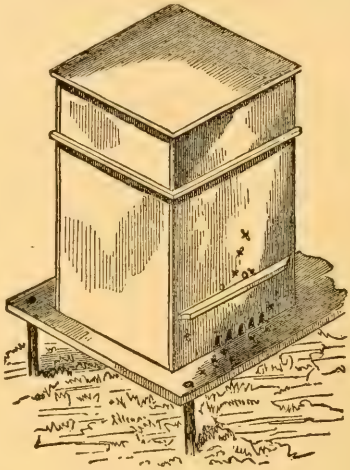
The queen has two notes; one of defiance, called piping; the other is a note of fear, a plaintive, pitiful wail, mournful in the extreme, and lingering long in the memory when once heard. This mournful note is set up when removed from the hive, when seized by other bees to destroy her life, or when her colony are starving. Whenever this note is heard, turn not a deaf ear, but immediately respond to the call, for there is something wrong. Rigidly examine the hive and remove the cause of complaint.



An unimpregnated queen is called a "virgin queen." They are capable of laying only drone eggs. A fertile queen is one which has mated with a drone, and is capable of laying eggs which may become either workers, drones, or queens. A barren queen is one who has passed the stage of laying eggs that will become either workers or queens, but continues to lay eggs which produce only drones. The period of fertility lasts from two to three years, and cannot be depended on longer safely. All such queens should be destroyed and fertile ones introduced, that the colony may not become extinct.

WILL BEE KEEPING PAY?

Of course it will. There is nothing that either men or women can engage in that will pay anywhere as well as bee culture; and there is nothing so well adapted for the farmers' sons and daughters as bee keeping. But to make the bee keeping business a success, you must go into it understandingly, and if you have not already the bees on hand, you will have to purchase a few colonies, and be sure to get Italians. If they are not in a movable comb they will have to be transferred. You will then have them in a hive that you have complete control over, even to examine every comb and seeing every bee or queen in the hive



THE MOVABLE COMB HIVE.

ENEMIES OF THE BEES.

Domestic fowls are destroyers of the bees, and also some birds from whose attacks, as they range in the fields at a distance from the hive, they cannot be protected. Among these is the titmouse, or blue tomtit, which devours the bees, and feeds his young with them; and in winter is said to endeavor to force his way into the hive itself. Mice are often very troublesome, and even rats sometimes make their way into the hive. Slugs and snails often occasion much trouble; and especially in warm summer evenings the attacks of wasps and hornets are a great annoyance to bees. In all these cases care and vigilance can do much. Wasps' nests ought to be destroyed wherever met with; insects of all kinds, such as earwigs, woodlice, ants, etc., should be cleared away. In a word, the hives and stands for them ought to be kept as clean and neat as possible.

THE BEE MOTH.

The bee moth is one of the most destructive enemies of the bee. There are two broods of the moth each year; the first brood appears in May and June, and the second, which is the most numerous, appears in August. During these months this moth remains nearly hid, but at night it approaches the hive and the female seeks every opportunity to deposit her eggs in the hive. When the egg is deposited it soon hatches out, and the work of destruction begins and continues until it spins a cocoon and soon appears as a full-winged moth.

HOW TO DESTROY THE BEE WORM.

There is no use to try and keep bees without giving them proper attention. The domestic animals of the farm and home need daily feeding and attention and he who would be successful with bees must be as attentive as though they required daily feeding and watering. Every day in the cool of the morning the hive should be lifted to one side and moths and other worms detected should be taken out and cut in two with a sharp knife or other instrument. If this is done during the months of May, June and August, the swarms will continue thrifty and if it is a good season for honey, they will lay in a large supply.

ARTIFICIAL SWARMING.

This should be undertaken only when honey is abundant in the fields and the nights warm. To divide them have a hive at hand of the same size and pattern as your others. Then from four hives take each two frames and place them in the new hive, supplying those in the old with the empty frames. Then move a hive which you have not disturbed a rod or more away to a new place, and place the new hive where that one stood. This should be done in the fields. These will come in loaded to their old place and find it strange, and, as it contains stores and young bees hatching and eggs from which to rear another queen, they will at once proceed to rear one, and remain and work as contented as ever. This process may be repeated every two weeks until you have secured sufficient increase. The hives from which you take the combs, and the ones which you move to a new place, will lose so many bees that they will not think of swarming, but will energetically make up their loss, and be better than if nothing had been taken from them. This is the safest of all ways to divide bees, and can be safely practiced by beginners.

FEEDING BEES.

Should the weather be favorable, every stock should be examined about the first of February. Should any one be in want of food it should be supplied. If in a box or gum hive, thin pieces of white sugar candy can be slightly pushed between the combs through an opening on the top. Honey or good sugar syrup should be given by means of a saturated sponge or comb, filled with honey placed at the opening on top, being careful to cover with a box to keep out outside bees. In movable frame-hives, frames of honey from other hives having it to spare is most convenient, and any required quantity can be given to the various feeders through the honey board.

REARING OF QUEEN BEES.

Premising that you use movable frames, make a number of small frames, as near four or five inches square as may be, to just fit inside one of your large ones. Fill with clean worker comb—that which has been frozen is the best, because the eggs of the moth will have been destroyed—and put the large frame containing these small ones in the middle of some stock with a fertile queen from which you wish to breed. Provide also some small boxes on the plan of a simple movable frame-hive, with loose top and rabbeting for the frames and just the size to accommodate three or four of them. When eggs have been deposited in the combs, set up one of your small boxes with them as a hive in miniature and confine it between a pint and quart of bees. They will immediately construct queen bees, and may then be opened. In this way any number of queens may be provided.

EVERY QUAIL AND EVERY PRAIRIE CHICKEN IS WORTH $1.00 A PIECE TO EVERY FARMER.

1. **Increase of Insects.**—It is a fact well established that insects are annually increasing and their ravages upon vegetation are more wide-spread and disastrous every year. New precautions, new remedies, and new experiments are continually necessary in order to protect our trees, fruit and vegetation. The outlook for fruit is becoming more and more alarming.

2. **Extermination of Birds.** — All the old settlers realize the vast difference between the number of birds twenty years ago and now. Millions of our song birds are slaughtered annually to satisfy the whims and follies of fashion. While quails, prairie chickens, partridges, grouse, pheasants and various other birds, that are the friends of the farmers, are almost exterminated in order to satisfy the passion for sport. Were it not for birds no fruit or grain could be raised.

3. **The Farmers' Friends.** — The farmer rarely ever gets any direct benefit from the game which flourish on his premises. The majority of our grain producers scarcely ever realize what protection is furnished by the birds during the spring and early summer. At that season of the year the fowls of the field and the birds of the air feed almost entirely upon worms and other insects, and one insect destroyed the first of the season may be equal to millions destroyed in the fall.

4. **A Dollar a Head.**—It is no doubt a well established fact that every quail, every partridge, every prairie chicken, every grouse, every pheasant, and the like, are worth a dollar a piece to every farmer. The insects which they destroy in the early season is worth three or four times more to the producer than the highest market price ever paid for these birds as game.

5. **Save the Birds.** — If farmers would unite and would protect the birds upon their farms, and keep off the hunters, it would be worth thousands of dollars to the country. It is difficult to estimate the value. Let farmers unite and keep out hunters, sports and dogs from their fields, and thereby protect their crops.

6. **Wholesale Cruelty and Slaughter of Small Birds.** — Some one has said, if women could only know of the destruction of bird life that their love of finery occasions, they would make it unfashionable to wear the feathers of murdered birds. In 1886, 5,000,000 birds were required to fill the demand for ornamenting ladies' hats. Forty thousand terns were killed in a single season on Cape Cod; 1,000,000 reed birds (bobolinks) in a single month near Philadelphia. The swamps and marshes of Florida are well known to have become depopulated of egrets and herons, and the State at large

THE DEAD BIRD.

has become a favorite slaughter ground for milliners' emissaries. Seventy thousand birds were killed in a small village on Long Island in a short space of four months. A lady in Florida heard the mournful notes of some birds in small cages. They were blind. Their eyes had been put out. The cages were hung in trees smeared with tar. The birds sing and attract other birds, who get stuck in the tar. They are caught and their eyes put out.

7. **Follies of Women.** — The little tufts of feathers which have been so much worn are taken from the beautiful egrets or small herons, who have them only during the breeding season. The bird is shot while trying to protect its young ones, and is easily caught on that account, and the young birds are left to starve. Many of the most useful and beautiful species of the birds are becoming extinct.

8. **A Plea for Birds, Grain, Fruit and Humanity.** — An extract from a letter from Michigan gives some idea of the complaint made by farmers:

"The destruction of birds has been carried on to such an extent that it is hardly possible to raise any kind of fruit, even the grapes as well as the apples getting too wormy to use."

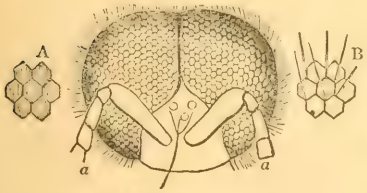
9. **$100,000,000.** — It is estimated that they save $100,000,000 annually to the farmer. Michelet, the great French authority, says: "There could be no vegetation, and therefore no life, if the birds were all destroyed."

10. **Let Every Man Frown upon Women** wearing feathers of birds, and they will soon give up the fashion. In fact, we ought to look upon a lady with a feather or bird upon her hat as lacking in sensibility and refinement.

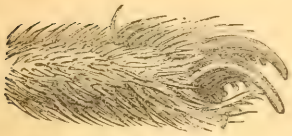
Insects Injurious to Vegetation and Remedies for their Extermination.

PECULIARITIES OF INSECT LIFE.

The insect world is more wonderful and beautiful than the animal world. The illustrations below show the forms and proportion of insects as they appear under a powerful microscope. Insects are a charming study, and he who has the opportunity to secure a good microscope and make the examination, will find great interest and many surprising results. Those who desire to become efficient and effective in the destruction of injurious insects must study the subject carefully and make many investigations. Secure a few works on insects, and great pleasure will be found perusing this subject.



HEAD AND EYES OF A BEE.

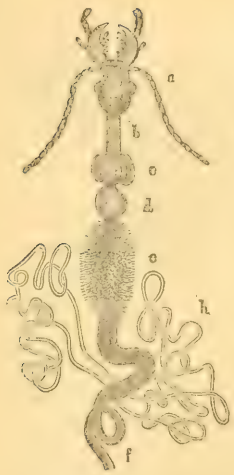


FOOT OF A SPIDER.

LEGS OF A CATERPILLAR.

THE GOAT MOTH.

The Goat Moth is a well-known insect, with a short body and large and broad wings of a pale browning white color, marked with short wavy lines. The caterpillar of this insect is flesh or wine colored, and has a few hairs upon it; and a faint and disagreeable smell is evolved from it, which is left behind upon the wood over which it has recently crawled. This larva gnaws the old trunks of willows and elms, and by excavating large galleries in the trees, it often destroys some of the largest and finest.



The Digestive Organs of an Insect.

a, head, jaws, etc.; b, oesophagus; c, crop; d, gizzard; e, chylific stomach; f, biliary vessels; g, intestine; h, secreting organs.

DIGESTIVE ORGANS OF INSECTS.

The digestive system of insects is quite complicated. It consists of a mouth variously modified in the different groups, a pharynx, a gullet, a first stomach or crop, a second stomach or gizzard, a small intestine, etc. In some kinds the mouth parts are modified for biting and chewing purposes; in others they are so modified as to be adapted for sucking organs.

SKELETON OF AN INSECT.

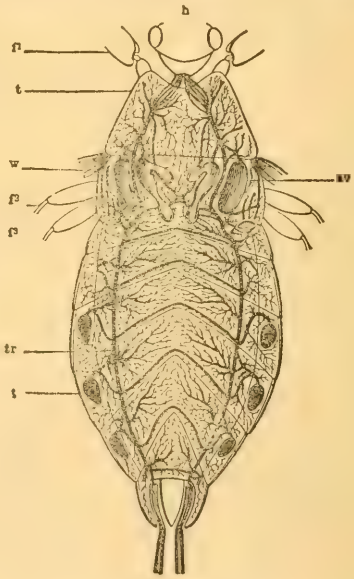
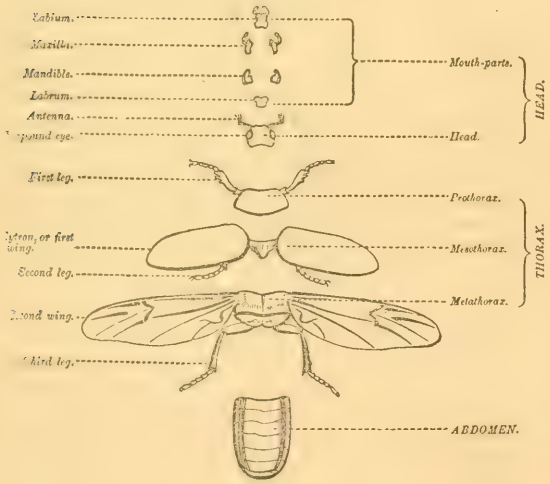
The Breathing Apparatus of a Bug.



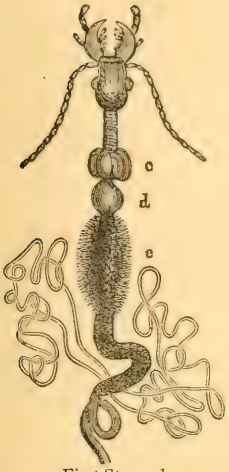
Names of All the Parts of an Insect.



HOW INSECTS BREATHE.

The breathing apparatus of insects generally consists of a system of air tubes, which branch in every direction throughout the body. These tubes receive the air through little air holes called stigmata, and are arranged along the sides of the lower portions of the body. Some insects, however, breathe by a sort of rude lungs or cavaties located in the inner portion of the body.

THE INSECT WORLD.

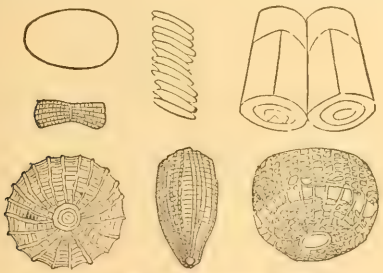


c, First Stomach.
d, Second Stomach.
e, Third Stomach.

1. **The Digestive Apparatus** is commonly quite complicated, their being three stomachs—one to correspond to the crop of birds, another to the gizzard, and the third receives the food after it has been softened and ground in the other two stomachs. Thus c, d and e represents the three stomachs in the above illustration.

2. **Forms of Feet.**—The feet of insects are in conformity with their modes of life. Some have claws or hooks; some have a kind of a suction cushion by which they can adhere to the surfaces; some have fringed feet to enable them to swim; and some have their fore feet shaped for digging, like the mole's, or rats.

3. **Wings.**—The wings are generally made very much like that of a Bat—they consist of a sort of a membrane extended over a slender frame-work. The wings of a moth, however, are covered with sort of a dust; when put under the microscope they are found to be made up of regularly formed scales truthfully and systematically analyzed.



Magnified Eggs of various Insects.

4. **Laying Eggs.**—With very few exceptions insects are oviparous, that means that they lay eggs. Some lay their eggs in Autumn and hatch them in the Spring; they are deposited in the earth, sometimes under the bark of trees, in rotten wood, or on or under leaves, etc.

5. **Insects** are commonly exceedingly prolific. The female White Ant produces fifty million eggs in a single year. The queen of the Honey Bee is supposed to lay over that number of eggs annually, and the Plant Louse is supposed to lay a trillion.

IMAGO, OR THE PERFECT INSECT.

6. **Metamorphosis.**—Almost every insect undergoes a certain change, which is called metamorphosis. In the first state the insect is a caterpillar, or a worm. In the second state it is wrapped up in a covering which is called a cocoon, or lies buried in the earth, and for some time remains in a sort of a sleep. When this is completed, it becomes a perfect winged insect and generally ready for flight.

LARVA, OR MASKED STATE.

PUPA, OR BABY STATE.

7. **Three Stages.**—An insect goes through three distinct stages. The first is called the Larva, which is the Latin word for mask; the insect is not in its true state or character, consequently it is called the Larva, or masked state. The second state is the sleeping state, when it is wrapped in a cocoon, or is going through its transformation in some other form, it is called the Pupa, the Latin word for baby, because it commonly appears something like a baby, helplessly sleeping in its bed, until the developed or waking time arrives. The next state is called the Imago, or perfect state, because it is now in the image of perfection, or complete development. Thus Larva represents the worm or caterpillar, Pupa the cocoon or sleeping period, and Imago the winged or perfect state.

8. **Reproduction.**—The Larva is produced from an egg, and the egg is laid by a perfect insect. When the Larva is first hatched it is very small, but it grows very rapidly and eats ravenously. The common fly is first a maggot, and then develops into a common fly.

9. **Pupa State.**—An insect undergoes many changes in developing from a worm into a butterfly. Insects in the Pupa state eat no food.

10. **In the Image State** the insect eats but little, as it has reached its growth and requires but little nourishment.

SCIENTIFIC NAMES OF INSECTS SIMPLIFIED.

Fruit growers, or at least a great many of them, have taken up the study of insect life more from necessity than choice, and it has always seemed to us that one reason for this aversion to Entomology has been the many scientific names which are necessarily used, and also from the fact that entomology has only of recent years become an art—of every-day practical appliance—as well as a science. Science in itself means a systematic classification, and the science of insects is in this respect no more difficult than the science of flowers or any form of life. As with flowers so with insects. Commencing as far back as the division of *Arthopoda* (from the Greek, meaning *jointed legs*), we find that this division includes INSECTS, ARACHNIDA (from a Greek word, meaning *spider*,) PYCNOGONIDA (from the Greek, meaning *thick* or *crowded knees* or *legs*) and CRUSTACEA (from the Latin, meaning *rind* or *shell*). We are only interested now, however, in the first named of the preceding, viz: INSECTS. These, we find, are divided into MYRIAPODA

THE HAIR SPIDER.

(from the Greek, meaning *numberless legs*) and the HEXAPODA (from the Greek, meaning *six-legged*). The MYRIAPODS are the less common of the two classes, and include as their names imply, such animals as Centipedes, Galley-worms, Millipeds, etc. The most of our pets are found among the TRUE INSECTS or HEXAPODS, and are characterized by having the body distinctly divided into three parts, viz: the Head, the Thorax or Chest, in which the Heart and Lungs are situated, and the Abdomen or Stomach. These true insects also have, as a rule, three pairs of legs and two pairs of wings. Going still further in the classification, we find that the Hexapodus are divided into eight different orders.

BOT FLY.

BEE FLY.

HORSE FLY.

First come the *Hymenoptera* or *Order I.* These (named from Greek words, meaning *membrane-winged*, have a mouth organ developed for biting, and also as a sucking tube. Their wings are small, transparent, and with few nerves or veins. Familiar examples of this Order are Bees, Ants and Sawflies. The next three Orders have mouths develeped simply as sucking tubes, the difference in the Orders depending upon their wings.

Order II. are the *Lepidoptera* (from the Greek, meaning *scaly wings* or *feathers*) and their distinguishing feature

is that the wings are covered with minute scales, such as butterflies and moths.

Order III. are the *Diptera* (from the Greek, meaning *two wings*) or with only one pair, and these are transparent and with few veins; the Housefly and Mosquito are examples of this Order.

Order V. are the *Hemiptera* (from the Greek, meaning *half-winged*). Those belonging to this Order have trans-

parent wings more or less veined, or the upper ones are developed half way as a leathery shield; examples of this Order are bugs, lice, locusts, etc. The preceding

SEVENTEEN YEAR LOCUSTS.

three as noted have their mouths developed as sucking tubes; the next four, on the contrary, have their mouths developed for biting, and in order to preserve this classification we have placed Order IV. out of its regular position.

Order IV. is *Coleoptera* (from the Greek, meaning *sheathed-winged*). In these the upper wing is a horny convex shield, the under wings being membraneous and folding upon a hinge, such as beetles.

Order VI. is *Orthoptera* (from the Greek, meaning *straight winged*). In these the upper wings are straight, being leathery or membraneous, and the under wings fold like a fan, such as Crickets and Grasshoppers.

Order VII. is the *Neuroptera* (from the Greek, meaning *nerved* or *veined winged*). These have thickly veined transparent wings, and Dragonflies are an example.

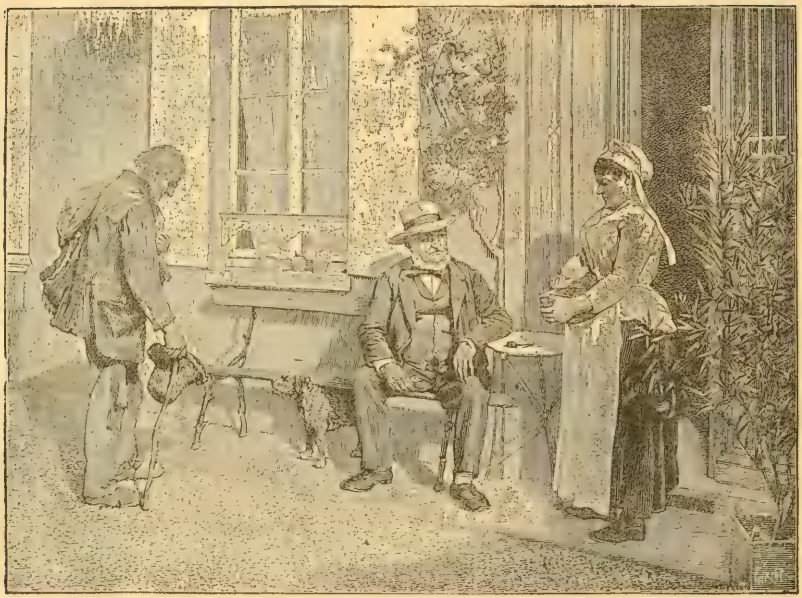
Order VIII. and the last, is the *Thysanura* (from the Greek, meaning *fringed tail*). These have no wings, but the stomach is furnished with more or less rigid bristles. These are very small animals, as the Bristletails and Springtails.

The above eight orders are, therefore, the main divisions of Entomology, and it may be well for those interested in bug life either from a liking of the subject or through force of circumstances, to master these hard names, trying to remember them, if possible, by themselves, or better from an understanding of what they mean. Perhaps later we may have something to say about the families comprised in these various orders, though it would be impossible for us to go further than the families without writing a regular book on the subject. For, remember, in each family is a long list of Genera (plural of Genus) with an unlimited number of *Species* under each *Genus*. In giving the scientific name of the insect, and a great many have no other, the first word is the Genus, and the second the Species. There are, as a rule, many species in each genus, a number of generea in each family, a number of families in each order, a number of orders in each class, and so on up to the last division, ending in the Animal Kingdom, each order, class or division containing less divisions than the preceding.—*Orange Judd Farmer.*

THE SCORPION.

The Archnida is an order of insects which have the body divided into two well marked regions—the head and hind body. They have simple eyes and four pairs of legs, they have no antennae nor wings, and they do not change their forms after they are hatched from the egg. From the egg to maturity they change their skin six times.

The bite or sting of some spiders are very poisonous, especially the Tarantula, which often causes death. The Scorpion is very dangerous, and requires immediate medical attention.



FEEDING THE SUFFERERS OF THE GRASSHOPPER RAID.

THE PRINCIPAL INSECTICIDES, AND HOW TO USE THEM.

1. **Care.**—The most important substances for spraying are poisons, and great care should be exercised in the use of any prepared combinations of Arsenic, Paris Green, and London Purple.

2. **The Most Common Kinds.**—The most common insecticides are Paris Green, London Purple, Slug-shot, White Arsenic, Hellebore, Pyrethrum, Kerosene Emulsion, Carbolic Acid, Tobacco, Bisulphide of Carbon, Benzine and Gasoline, and Coal Tar.

3. **Paris Green Spray.**—For Fruit and Shade Trees use one pound of poison to 250 gallons of water, and keep well stirred; smaller quantities in proportion. The chief objection to Paris Green is, that it is so heavy that it settles quickly to the bottom of the vessel—very much more quickly than London Purple. It is also more expensive.

4. **London Purple.**—London Purple is a little more injurious to the foliage than Paris Green, but keeps in solution better, as it does not settle to the bottom so quickly. It should never be applied to foliage easily injured, like peach and plum trees. For general spraying use three ounces in sixty gallons of water. Smaller quanties in proportion.

5. **White Arsenic.**—White Arsenic should be handled with great care, as it is liable to burn the foliage.

6. **Hellebore.**—Use a tablespoonful to a pail of water and sprinkle the foliage with it. It will generally kill the worms found on currants, gooseberries, and the like.

7. **Kerosene Emulsion.**—Kerosene Emulsion is prepared by adding two parts of kerosene to one part of a solution made by dissolving half a pound of hard soap in one gallon of boiling water, and churning the mixture through a force pump with a rather small nozzle until the whole forms a creamy mass, which will thicken into a jelly-like substance on cooling. The soap solution should be hot when the kerosene is added, but of course must not be near the fire. The emulsion thus made is to be diluted, before using, with nine parts of cold water. This substance destroys a large number of insects, such as the Chinch Bug, Cabbage Worm, and White Grub; and is a comparatively cheap and effective insecticide.

8. **Benzine and Gasoline.**—These may be set under the bushes or foliage where insects are destructive, and the gas rising will either destroy or drive away the insects.

9. **Coal Tar.**—This is used along the side of ditches, to keep chinch bugs from migrating into other fields.

A MOTH.

A NEWLY DISCOVERED INSECTICIDE.

Thought to be More Desirable than Paris Green.

A new and important discovery in the domain of pomology has been made by F. C. Moulton, of the gypsy moth commission, Malden, Mass. Arsenate of lead was the substance used, which was prepared by dissolving eleven ounces of acetate of lead and four ounces of arsenate of soda in 150 gallons of water. These substances quickly dissolve and form arsenate of lead, a fine white powder, which is lighter than Paris green, and while being fully as effective in its operation in destroying insect life, is far preferable for several reasons: If by any means the mixture happens to be used stronger than necessary to destroy insect life, even three or four times the necessary strength, it in no wise injures the foliage of the plants upon which it is sprayed. This is greatly in its favor, for often in using Paris green for Potato beetle larvæ and for the codlin worms, as much injury results from the poison burning the foliage as would result from the insect if let alone.

This is a better insecticide than Paris green under all circumstances and for all insects, says Prof. Fernald. It has the advantage of being readily seen on the leaves, so that one can tell at a glance which have and which have not been sprayed, which is often of great convenience. Being lighter than Paris green, it does not settle so quickly, and as a result can be distributed more evenly over the foliage. A great objection to the use of Paris green is the liability of using an over-dose, and thereby injuring the foliage of the plants sprayed. With the arsenate of lead, it can be used, if necessary, in the proportion of 25 lbs. to 150 gallons of water, without injury to the foliage. Prof. Fernald advises the addition of two quarts of glucose, or if that cannot be obtained, two quarts of molasses to each 150 gallons of water, used for the purpose of causing the insecticide to adhere to the leaves. Experiments have shown that the insecticide will remain on the trees for a long time, even after heavy rains, and we infer, prove effective. The cost of these chemicals is given as 8¢ per lb. for arsenate of soda and 14¢ per lb. for acetate of lead, at wholesale. It should be borne in mind that these substances are all poisonous, and should be handled with proper care.

ANTS BRINGING HOME THEIR CAPTIVES.

HOW TO SPRAY FRUIT TREES AND SHRUBS;

—OR—

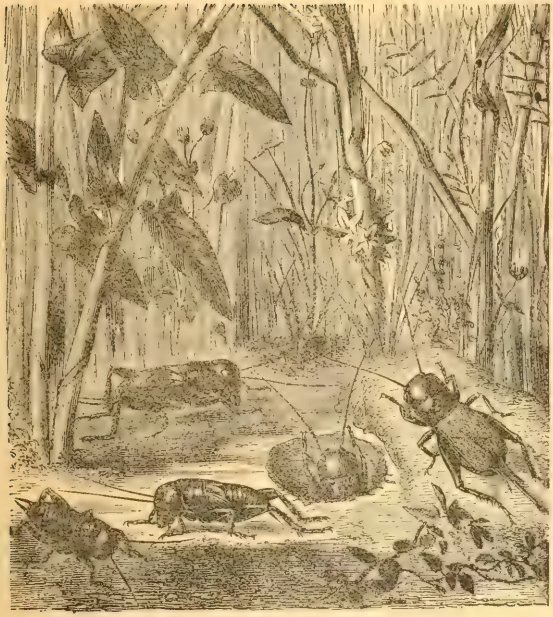
HOW TO RAISE PERFECT AND WELL DEVELOPED FRUIT EVERY YEAR.

1. Farmers and gardners must come to it. Every year's experience shows conclusively that our fruit is not only becoming more imperfect, but is decreasing in quality and quantity.

2. Farmers must meet the new conditions, be prepared for new duties, or they will soon lose their beautiful fields and fruit gardens.

3. Spraying is no longer an experiment, but a science, and but few men who keep a fruit orchard, potato field, grape vineyard or cotton field, hop field or tobacco field, must resort to spraying at the proper time.

4. To show the benefit of spraying select a portion of your trees or shrubbery, and carry out the instructions and receipts given, and you will demonstrate to your own satisfaction in a single season the wonderful benefit of spraying and protecting your fruits.



THE FIELD CRICKET.

The crickets are nocturnal insects, whose colors are dark and of brown and gray tints. They have all long and slender organs of sensation, and legs adapted for jumping. The males have a large musical apparatus, and the females possess an elongated ovipositor.

These insects live very solitary existences, except when they are disposed for that society which they suppose they can obtain by their everlasting chirp. Each of them digs a hole, and does not leave it except during the night, and children in the fields, who know this, can often catch a field cricket by poking straws down cracks in the ground.

HOW TO DESTROY CLOTHES MOTHS.

One of the greatest enemies of the housewife is the clothes moth. It is very small and makes its way through the smallest crevices. The female moth finds its way in early Summer among the clothes and furs, suitable for food for its young, and there deposits about fifty or more eggs. In about a week the eggs hatch and the young worms begin to eat upon the cloth upon which the eggs were laid. It spins a sort of case which it lengthens and enlarges. Not content with eating and making a house for itself upon the cloth upon which it lives, its cuts its way in various directions through the cloth and drags its case after it. As the weather gets warmer the little worm closes its case at the ends and in three weeks the perfect moth will make its appearance.

REMEDY. Beat the garments well early in the Spring and occasionally during the Summer. It is better to keep the articles in a large paper bag. Occasional airing is good.

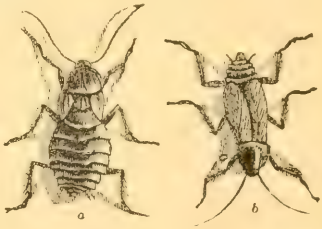
For clothes packed in boxes or trunks, put a little oil of cedar on a piece of paper and roll up and wrap with other paper to avoid soiling the garments, and put several of these rolls into each box or trunk. Carbolic acid, turpentine or benzine is equally good, used in the same manner.

Black pepper, a piece of camphor gum, or a handful of snuff wrapped up with the clothes is excellent.

Caution. Camphor should never be used in keeping seal skin, as it takes the color out of the fur.

A close closet lined with tar paper is the best for furs. It is also excellent for clothes.

Whole cloves are now used to exterminate moths, and some say they are much better than tobacco, camphor, or cedar shavings.



HOW TO DESTROY COCKROACHES (Blattidæ).

HISTORY. The cockroach does not, like most insects, pass through several distinct changes. It sheds its skin several times and develops into a full-grown insect. The female carries her eggs with her in a little sack. When the eggs are ready to hatch the case is dropped. The young are white after being hatched and change for a dark brown color. They shed off five or six times before maturity.

Cockroaches are very troublesome, eating everything that comes in their way. They have a strong and disagreeable odor.

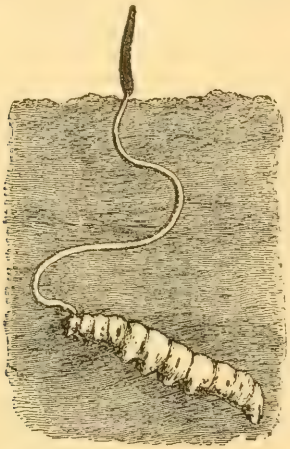
Another species of the cockroach known as the "Water bug" is very common in New England. Its habits and manner of development are about the same as the regular cockroach.

REMEDY. Thirty-seven parts of borax, nine parts of starch and four parts of cocoa sprinkled around the haunts will usually exterminate them in a few days.

Other receipts, such as a tablespoonful of red lead and Indian meal mixed with enough molasses to make a thick batter used for a few evenings, will also produce fatal results.

Insect powder does not kill them, but stupefies them so they can be swept up and destroyed.

Pouring hot water on them where it can be done, is a sure remedy.



A VEGETABLE CATERPILLAR.

Attention has been called to the Aweto of New Zealand as one of these puzzling products of nature. In the early stage of its growth it is a perfect caterpillar, growing to the length of three and a half inches. It is always found in the neighborhood of the Ratatree, a large scarlet-flowered myrtle, and habitually buries itself a few inches under ground.

When the Aweto is fully grown, it undergoes a wonderful change. The spore of a vegetable fungus fixes itself directly on the caterpillar's neck, takes root, and grows like a diminutive bulrush, from six to ten inches high, without leaves, and with a dark-brown head.

The singular stem penetrates the earth over the caterpillar and stands up a few inches above the ground. The root grows at the same time into the body of the insect, exactly filling every part without altering its form in the slightest degree. It simply substitutes a vegetable for an animal substance.

As soon as this process is completed, both the caterpillar and fungus die, and become dry and hard, and the thing is then a wooden caterpillar.

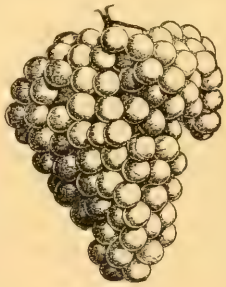
ALL KINDS OF RECEIPTS FOR SPRAYING PLANTS, TREES AND SHRUBBERY.

Insects Which Sting the Fruit and Devour the Foliage.

Use Paris Green or London Purple in proportion of one pound to 250 gallons of water, and apply just after the bloom has dropped, then once or twice thereafter, ten days apart.

For Insects like Plant Lice.

Make a kerosene emulsion of one-fourth pound of soap, one pint of kerosene, two quarts of hot water. One quart of this mixed with twelve quarts of water and spray as soon as the first broods appear.



GRAPES.

The grape vine flea beetle, and the grape phylloxera can be destroyed by spraying with the kerosene emulsion. The former can also be destroyed with London Purple or Paris Green.

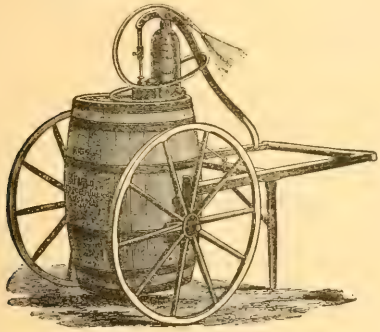
For Mildew or Black Rot use a solution of potassium sulphide—one ounce to five gallons of water. Spray after leaves begin to start; again just before blooming; thence once in two weeks until fruit is of good size.

For Fungus Attacks, Such as Mildews, Rots, Scabs, Etc.

Receipt: Dissolve six pounds of sulphate of copper in sixteen gallons of water, four pounds of lime in six gallons of water. Apply to grapes early in the season, other fruit after bloom.

Second Receipt: Three ounces carbonate of copper in one quart of ammonia, and diluted in twenty-five gallons of water. The two above receipts are effective for grape rot, apple and pear scab, and leaves no coloring upon the fruit. Apply before any foliage appears and then after the foliage is out, and fruit formed, three to six times according to the season.

The Vermorel Nozzles are best, they throw a fine spray and use less material, and for high trees only a little longer hose is necessary.



Spray Pump.

CABBAGE.

To destroy the cabbage maggot, spray the roots with two ounces white hellebore in three gallons of water. Kerosene emulsion is also recommended; in either case the earth should be pushed away by hand and the liquid forced about the roots. To destroy the cabbage worm, spray with hot water at 130 degrees Fahrenheit, or with kerosene emulsion. The green cabbbage worm can be destroyed by spraying with pyrethum, two tablespoons to two gallons of water.

PLUMS.

Destroy the aphis with kerosene emulsion and a fine spray nozzle. The curculio can be destroyed by spraying with three ounces Paris green to forty gallons of water. First application should be made as soon as blossoms have fallen, and repeat at intervals of a week or ten days. Four applications should be sufficient. Other enemies of the plum will be destroyed by this method, but in all cases be particular to keep the poison and water constantly stirred.

STRAWBERRIES.

Leaf blight can be prevented by the use of the Bordeaux mixture, applied with a spray pump once in two weeks; first application must be made early in the season.

Destroy the crown borer by spraying with Paris green, three ounces to forty gallons of water, as soon as the new leaves open, again just before the first blossoms unfold, and again after August 1st.

PEARS.

The pear slug can easily be destroyed by spraying with Paris green, four ounces to fifty gallons of water, or kerosene emulsion as soon as it begins operations. The pear-leaf mite can be destroyed by spraying with kerosene emulsion. The codling moth and curculio should be treated the same as recommended for apple trees.

Hop Plant Louse.

This insect appears in June or early in July, and is very destructive. Spray as soon as the pests appear with kerosene emulsion. This is guaranteed to kill the lice in thirty minutes after application.

For roses use hellebore. A tablespoonful in a pail of water.

Small fruits and bushes can be sprinkled with a bucket sprinkler.

THE SEVENTEEN-YEAR LOCUST.

The Locusts deposit their eggs in the earth, and close them up in a kind of tunnel, and the young ones are born without wings, which become developed as they grow older.

TOMATOES.

The green tomato worm can be destroyed by spraying with London purple, one-fourth pound to sixty gallons of water. This should not be used after the tomatoes have begun to ripen.

PEACHES.

Peaches if attacked by the black peach aphis, spray with kerosene emulsion. The plum curculio frequently attacks the peach, in which case spray with Paris green, two ounces to fifty gallons of water; be sure to keep it well stirred, and use with caution. Never use London purple on peach trees.

CHINCH BUG ON CORN.

Can be destroyed with the kerosene emulsion. Every farmer should learn to make this emulsion, as it is a most useful insecticide. It is especially valuable for killing lice on cattle and hogs. Paris green will not kill chinch bugs. Apply the emulsion with a spray pump.

CURRANTS AND GOOSEBERRIES.

To destroy the worms spray with powdered white hellebore, one ounce in three gallons of water, as soon as the worms appear. To destroy the yellow aphis, spray with kerosene emulsion early in the season. To prevent mildew use one-half ounce potassium sulphide to one gallon of water.

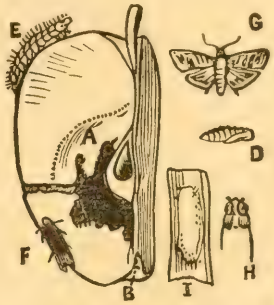
The spray pump can be used for washing buggies with good advantage. After washing the buggy, wipe dry with a chamois skin or soft rag and then apply a little kerosene oil and lampblack with a small sponge.

MEAT OR FLESH FLY.

The Flesh Fly and the Blue Bottle are very useful, or as they are called, Gentles, for they devour dead bodies of all kinds. The curious legless maggots are well known, and so are the egg-shaped, dark-brown pupæ. The maggots, which at first are called "fly blows," increase in size with very great rapidity if they have sufficient food; and there is some truth in the saying that a pair of maggots will eat up a carcass as soon as a lion, for the reproductive powers of the female are enormous.

COTTON.

The Arkansas Industrial University at Fayetteville says, the following is one of the most efficient, inexpensive and harmless remedies for the destruction of the cottou worm: Two and one half pounds pyrethrum, and one and one-half gallons of kerosene oil, and one pound soap. Dissolve the latter in one gallon of boiling water, and to this hot mixture add one gallon of the above extract (pyrethrum and kerosene), and mix thoroughly with a force pump; dilute with water 450 parts to one part of the emulsion, and apply to the cotton with a "Vermorel" nozzle; this extract kills by contact, and though destructive to insect life, is not in the least injurious to those handling it.



HOW TO PROTECT APPLE AND CHERRY TREES.

For the prevention of leaf blight spray as soon as the leaves are full grown with Bordeaux mixture or Ammonical carbonate of copper. To destroy the codling moth, canker worm and curculio, spray with Paris green or London purple, one-fourth pound in forty or fifty gallons of water, soon after the blossoms fall, and again two weeks later. To destroy the aphis or plant lice, spray with kerosene emulsion as soon as the pests appear. To destroy the web worm spray with London purple or kerosene emulsion about August 1st or 10th, or as soon as they appear. This application should be made during the middle of the day, when the worms are out of their webs and feeding on the leaves.

LOCUST OR GRASSHOPPER.

The locusts or grasshoppers deposit their eggs in the earth, and close them up in a kind of tunnel, and the young ones are born without wings, which become developed as they grow older.

THE APPLE MAGGOT.

1. **Apples** are usually injured by a codling moth, who works about the core, but the apple maggot feeds all through the apple, as shown in the following illustration. It ruins, when it once enters, the entire apple, as no part of it can be saved.

2. **The Apple Maggot** is a two-winged fly, seen early in Summer, and deposits its eggs under the skin of the young apples early in the season. In the course of a few days they develop into maggots, and permeate the fruit in all directions. In six weeks they develop into full size of a whitish or greenish-white color. They

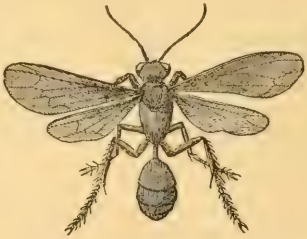
then make their appearance on the surface, drop to the ground, and penetrate the soil to the depth of about an inch, where they will remain until the following Summer, when they come out as full-fledged flies.

3. **Remedies.**—As yet there are no remedies that will produce the desired result. The only system of extermination is to collect all the windfalls and destroy all the apple pomace, so there will be no sources for their development. Only a few States are suffering from this insect, and great caution should be exercised against its spreading by vigilantly using the above precautions.

COMMON INSECT PESTS.

Good, Tried Remedies — Patent Insecticides More Dangerous Than Home-Made.

Bulletin No. 24 of the Colorado Experiment Station is devoted to "A few Common Insect Pests," by Prof. Gillette, and includes a discussion of the



"Imported Cabbage Worm," the "Southern Cabbage Butterfly," the "Cabbage Plusia," the "Cabbage Plutella," "Flee Beetles," and "Onion Thrips." Several species of parasites on the cab-

bage worm are mentioned, but it is stated that remedies should be resorted to without expecting these natural enemies alone to keep the insects in check. The methods of treatment deserve repetition, and it may be remembered that these, given for the imported Cabbage Worm, are also the most efficient for the Southern Cabbage Worm, the Cabbage Plusia and the Cabbage Plutella: "As the eggs are deposited on the outer surface of the leaves, and the worms feed for some time before reaching the head, these insects may be nearly all destroyed by the prompt application of any one of several good remedies. Among

the cheapest, most easily applied, and to my mind the best of the remedies to destroy cabbage worms, are the arsenites—London Purple or Paris Green. I have given abundant proof of the harmlessness of such applications to those who eat the cabbages, in Bulletin 12 of the Iowa Experiment Station.

Some of the Remedies.

"Thoroughly mix one ounce of the poison in six pounds of flour, and dust it very lightly over the plants from a cheese-cloth sack, in the evening or early morning, when a little dew is still upon the leaves. Make the first application soon after the plants are set out. Certainly no one can think that there would be the slightest danger in giving such treatment up to the time that the heads begin to form. After the heads have formed, the poison can be applied mostly to the outer leaves; but if any is put upon the head itself, it is almost impossible that it should do harm, as the surface leaves of the head are not eaten, and these leaves in a growing cabbage are continually spreading and becoming outer leaves. Neither can the poison be washed by rain into the cabbage, for the outer leaves do not run into the head. I should not think it advisable to apply the poisons nearer than 7 to 10 days to the time of harvesting the cabbages, and it would never be necessary to do so.

Patent insecticides, such as Slug Shot and Oxide of Silicates, have been much used by gardeners for the destruction of cabbage worms. The poison in these insecticides is Paris Green, but no one ever heard of a person being poisoned from eating cabbages thus treated. These patent insecticides are much more dangerous to use than one a person prepares himself, for he is usually ignorant as to the composition of patent compounds, and is more liable to be careless with them. For those who prefer not to use the arsenites, there is probably no better remedy than Insect Powder, or Buhach. This substance kills by coming in external contact with the worms, and is best applied by means of a blower that sends the particles of dust down between the leaves of the plants. This powder is not poisonous to man, and hence is very safe to use or to have in the house. The chief objection to this substance is its expense. The powder is very light, and a pound will treat a large number of plants. A remedy much recommended by Dr. Riley is hot water. Water may be poured boiling hot into a watering-pot and applied at once to the caterpillar, and, if the plants are not too thoroughly drenched, the latter will not be harmed, while all the worms touched by the water will be destroyed. Worms that are protected upon the under side of the leaves cannot, of course, be treated. Kerosene emulsion, if applied in extra strength and with considerable force, will also kill many of the worms, but I have not found this substance of much value in destroying the larvæ of *Pieris rapæ*."

APPLE TREE BORERS.

Signs.—The indication of apple tree borers are that they make their appearance, especially in young trees, by a sort of a sawdust being pushed out of the openings in the bark. The discoloration of the bark of the apple tree also shows where the grubs are at work.

APPLE TREE BORERS.

Remedies.—Apply on the first of June a solution of soft soap and crude carbolic acid, and two weeks later make another application.

The Mixture.—One and one-half quart of soft soap or one and one-half pound of hard soap mixed with two gallons of boiling water and one pint of crude carbolic acid. Mix thoroughly.

It is a good plan, late in the Fall, to go over the young orchard and examine the trees, and see if there are any indications of borers or eggs; they can be easily destroyed with the knife.

The Bark Louse represents a sort of whitish or yellowish scales, and in the fall they increase in size, and by the end of the season the tree has a sort of a scaly

covering. They are apparently fast to the tree, and are parasites feeding on the sap, and not a part of the bark, as many suppose.

Remedy.—Scrape off the tree with a dull knife or hoe as much as possible. Young trees should be scraped very carefully, then scrub with a broom and apply the soap emulsion, used for apple tree borers, double strength. In June spray the trees with kerosene emulsion.

THE POPLAR BUG.

Poplar trees are frequently much damaged by this insect. The grown bug is of a green bronze color; the larva is red and is spotted with brilliant black. The larva destroys the foliage and does great injury. Remedy: Spray with kerosene emulsion.

A New Way to Protect Cucumbers, Melons, and Squash Vines.

The worst enemy of these vines is the little striped yellow bug. It first appears as a little tiny worm, and in almost two weeks casts off its skin and acquires its perfect form.

Remedy.—The best way to raise vines which these insects feed upon, is to get eight inch tile, cut them in two in the middle, or have it done at the tile factory, and set into the earth several inches, plant the seeds inside the tile, and keep it covered with a window glass until the vines are beyond the reach of the bugs. The glass draws the heat and makes the growth thrifty and rapid.

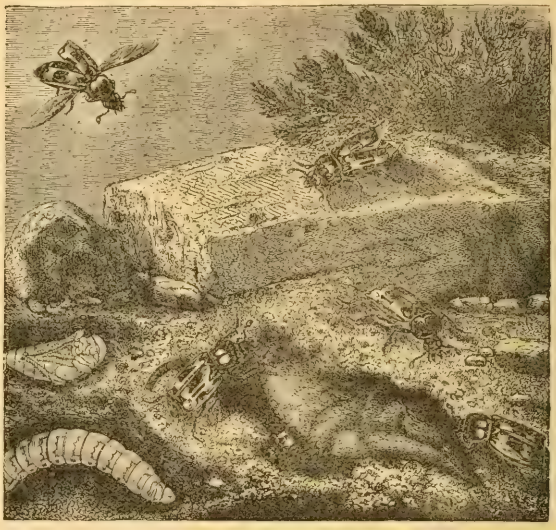
The Ohio Experiment Station recommends the following: Take the refuse of a cigar factory, dry it and powder it, and apply a shovelful of the powder to each hill; after each rain renew the application. The results are excellent.

Tobacco acts both as a mulch and a fertilizer, and is an excellent thing for cucumbers and melons, aside from its beneficial effects in keeping off the cucumber beetle.

Another Method.

Place over each hill a thin piece of cheese-cloth about two feet square, and fasten the edges down by loose earth. A little twig may be bent in the form of a curve and stuck into the ground to keep the cloth from the plants, though this is not necessary.

The Large Squash Bug.—They have a strong odor like a bed bug. It is a terrible enemy to the squash and pumpkin vines. The only remedy is to tear off the part of the leaf where the young cluster, and crush them under foot and to catch the old ones and destroy them. Application of hot water 150 degrees (Fahr.) will destroy them.



THE SEXTON BEETLE.

The above engraving represents a small dead animal which is beginning to disappear of the consequences of the beetles having dug beneath it. These insects are a sort of scavengers and not injurious, and should not be molested, because they do more good than harm.

HOW TO KILL THE PLUM WEEVIL.

1. Pick up carefully every day all the withered plums that fall prematurely from the trees and burn them.

2. Pasture hogs in a plum orchard and the results are generally very good. No other remedy has ever been successfully tried.

THE CUCULLIA MOTH.

The Cucullia has some very pretty moths and caterpillars. The moths have long, pointed wings, long bodies, and a sort of hood to their thorax, and are called Sharks. They feed upon flowers and plants, and can be easily destroyed by picking them off by hand, as they can be easily picked up; or, if they are very numerous, they can be destroyed by spraying with kerosene oil.

HOW TO DESTROY PLANT-LICE.

There is scarcely a tree, bush or herb that grows in our gardens or fields, that is not infested with some species of plant-lice. Their manner of living, and of reproduction, has attracted much interest. They both deposit their eggs and bring forth their young alive, a peculiarity which does not take place in any of our four-winged insects. Their multiplication is immense, and were it not for their numerous enemies, all our vegetable products would be consumed as fast as they grow.

Remedy. When the plant lice get too numerous take a little flower of sulphur, and mix it with a little [illegible] and [illegible] on the plant.

How to Kill the Orchard Caterpillar.

The Appletree Caterpillar during the month of May forms large cobweb-like nests in the forks of the limbs of the apple and cherry trees.

Remedy. Take a long pole and tie a large rag in the shape of a ball on the end of it; then saturate the rag with kerosene oil and light it and hold it, for a second only, under the nest. It destroys the nest and worms at once. It takes but a short time to go over the orchard, and it saves the fruit as well as the life of the trees. The same remedy will apply to other trees, such as walnut, etc.

How to Destroy Currant and Gooseberry Worms.

Take a tablespoonful of hellebore and stir it into a pail of water, and apply to the bushes with a sprinkler. One or two applications will generally be sufficient. A little care in watching the bushes is necessary. The worms generally begin at the bottom, and are not noticed until the bush is nearly destroyed.

THE VINE MOTH.

The Vine Moth is very common in some sections of the country, and is very injurious to vines. The moths fly in the month of July, and soon lay their eggs on top of the vine leaves, where they are readily seen. During the month of August the little caterpillars are hatched, but they do not begin to eat. Soon each one hangs itself on a silken thread, waiting to be moved to and fro by the breeze until it touches the wooden prop of the vine, or the stem of the plant, and then enters the cracks of the wood or beneath the bark until late in the Spring, and remain in a perfectly sleepy and quiet state. When the hot weather commences again, they climb up the tender shoots and devour everything that comes in their reach. Whole vineyards are often destroyed.

Remedy: Spray with a strong kerosene emulsion when they first make their appearance.

How to Exterminate the Strawberry Worm.

Mow the strawberry plants close to the ground while the worm is among the leaves. Let them dry a short time and pile them up with a little straw and burn them. It is also recommended to burn them right over the roots of the plants. This can be done without much injury to the strawberry plants.

HOW TO DESTROY GARDEN INSECTS.

The Cut Worm.—A great enemy of garden plants is the larva of the dark colored miller or moth that enters our dwellings in the evening when the lamps are first lighted. This worm will cut off the plant close to the ground. It is usually done at night, and the next morning the grub can be found just beneath the surface and easily destroyed.

Remedy: Place a lighted lamp or torch in the garden in the early part of the evening, and a pan of water well whitened with milk near by, and many of the moths will fall victims.

FIG. 1.

FIG. 2

THE SCREW WORM.

Its Ravages on Horses, Cattle, Sheep, Hogs, Etc.

DESCRIPTION AND CURE.

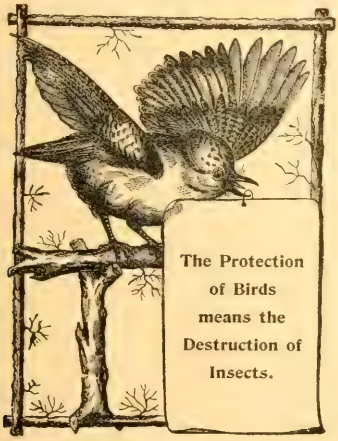
The mature insect is a fly (Fig. 2.) a little larger than a common housefly, and lays its eggs in wounds, sores, and in the natural openings of man and animals. Young calves are almost invariably affected in the naval, and frequently in the mouth, causing the teeth to fall out. Young colts are often affected in the same way. Barb wire injuries to horses and cattle are the most common sores in which the screw worm is found. Hogs are very liable to become affected by castration and other wounds.

HISTORY. After the egg is laid it becomes a small maggot, which soon burrows itself in the flesh of the wound. The maggot grows steadily in size, and eats more and more every day of the soft flesh around the wound or sore. The worm

is full grown in about a week. They then leave the sore and fall to the ground, and in about 12 days become flies.

SYMPTOMS.—A swollen, gaping condition of the wound, and the constant discharge of blood. While the sore is unhealed new eggs are constantly being laid, and if the worms are not destroyed, they eat deeper and deeper, and often kill the animal.

REMEDY. Cresylic ointment, calomel, chloroform or a little carbolic acid in water. In some cases bandages are useful. In others the sores can be filled with okum and a few stitches taken. All treatment should be supplemented by daubing the margins of the wound with pine-tar to ward off the fly.



THE ENEMIES OF THE FARM AND GARDEN.

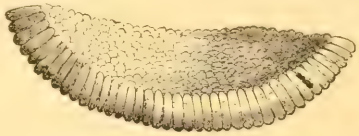
There is a vast variety of insects that injure or destroy the flowers, vegetables, and shrubbery of our fields and gardens.

Many of these insects are preyed upon by native birds, and it is strange that so few of our gardeners are familiar with this fact. Many of them, while they are in the garden or field battling with the destructive insect, their sons, with air gun or sling, are destroying their best friends. Birds are the friend of the farmer and gardener, and should be protected against the ruthless onslaught of cruel and thoughtless boys.

Many farmers kill the robin and other birds on account of the few berries or cherries they eat, but they ignorantly destroy their friends instead of their enemies. The principal food of birds is insects, and the truly wise farmer should protect his birds, quails and prairie chickens just as much as he does his domestic fowls

MOSQUITO JUST TAKING WING.
(GREATLY MAGNIFIED.)

The Mosquito family is remarkable in many respects. The eggs are deposited on the surface of stagnant water, about three hundred of the eggs are fastened together in the form of a sort of a raft, which floats upon the surface of the water until the mosquito is hatched out. The mosquito, when first hatched, is called a Wriggler, and lives in the water exclusively. It is not, however, like a



A BODY OF MOSQUITO EGGS GREATLY MAGNIFIED.

fish, it has no gills, and therefore has to come to the surface to breathe.

When the Wriggler develops, it comes to the top with its back upward, which breaks open and a full-winged mosquito appears, the same as seen in the cut above. It rests upon its cast off skin for a short time, and then unfolds its wings and flies.

Remedies for Mosquito Bites.—If mosquito bites are irritable, apply a little soda or saleratus water, or a little lime slacked in water will likewise have the desired effect.

How to Destroy Tobacco Worms.

The tobacco worm, or horn caterpillar, is the chief pest of the tobacco field. The moths appear in June and July, and the female at once lays eggs on the upper surface of the leaves; these hatch in about twenty-four hours, and the worms at once begin to eat. Can be destroyed by spraying with Paris green or London purple, one-fourth pound to fifty gallons of water.

A Remedy for the Harvest Mite, commonly known as Chiggers or Jiggers.

1. These little mites cause about the same irritation of the skin as the itch mite, and are only found in the southern half of the United States and Mexico.

2. They get on the lower limbs and work their way upward on the body. They cut and dig their way into the skin, causing great irritation and annoyance, sometimes swelling and inflammation.

3. REMEDY. Mix equal parts of powdered sulphur and fresh lard, and apply as often as necessary. Also kerosene oil will destroy the insects and allay inflammation.

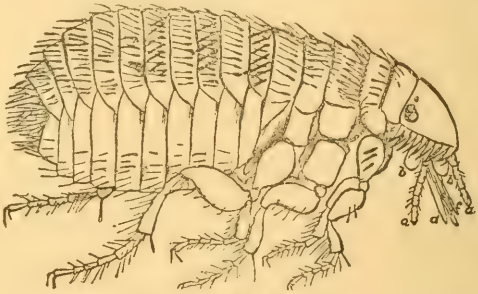
How to Destroy Cabbage Worms.

The cabbage worm has been very troublesome of late years, but is easily got rid of. Our plan is to go over the patch in the morning and sift a little fresh Persian insect powder over the heads while the dew is on. This will kill every worm it touches in less than five minutes, and it is but a short job to treat over five hundred heads if a common pepper-box, such as ground pepper comes in, is used to hold the powder. One shake on a calm morning before the breeze starts up is sufficient for a head, and it can be done almost at a walk. This operation should be repeated at least once a week as long as the millers are seen flying around. The insect powder is entirely harmless, and is only poisonous to insect life.

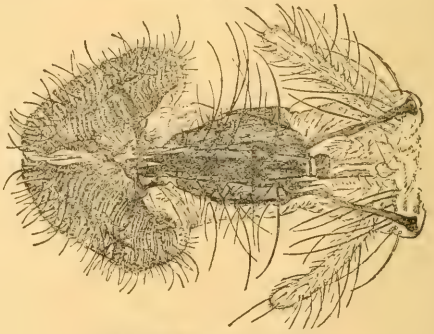
HOT WATER.—Hot water is also an excellent remedy. Apply at about 150 degrees Fahr. No injury to the cabbage will result.

How to Kill Worms on Rose Bushes.

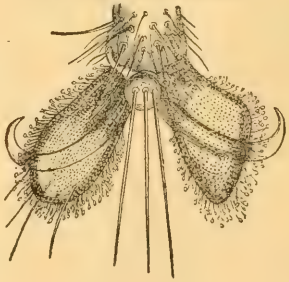
Take a pail of water and stir in a tablespoonful of helebore and sprinkle the bushes thoroughly. One application will generally be sufficient.



A FLEA MAGNIFIED.



THE TONGUE OF THE FLY.



FOOT OF A FLY.

THE STAG BEETLE.

The Stag Beetle is a very popular bug. It has been known to gnaw its way through lead pipe. It is a very strong beetle the larvæ of which penetrates wood, and is generally found in rotten portions, and is sometimes very destructive to younger trees.

HOW TO EXTERMINATE SPIDERS.

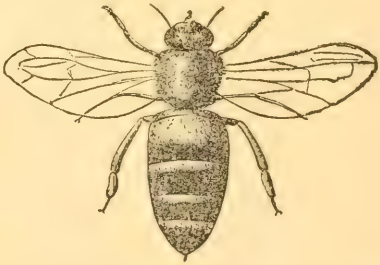
Take a small common kerosene lamp and light it, and late in the afternoon or early in the evening look over the corners and places where spiders are commonly found, and when one is seen hold the lamp chimney directly beneath it, and it will fall at once into the chimney and be instantly destroyed. It is not difficult in this way to destroy all the spiders in the house in a few evenings. It avoids killing them by sweeping them down and staining the walls and carpet. Early in the evening is the best time.

HOW TO PRESERVE BOOKS FROM BOOK MOTHS.

The little Bristle Tail or Silver Fish has a little long, slender body covered with a delicate silver scale; it has no wings and passes through no changes. It feeds on the paste of the binding of books, devours leaves, eats off the labels in Museums, and is generally destructive to both books and papers.

Books are also eaten by the larva of a little bug that produces a ticking sound like a watch — it is called the "Death Watch," as it is usually heard in the night ticking like a watch.

REMEDY. A little rag saturated with benzine or carbolic acid placed along the back of shelves will clear the library of all insects. Insect Powder sprinkled over the books will destroy the little "Silver Fish" insect instantly.



A CURE FOR BEE AND WASP STINGS, SPIDER BITES, Etc.

1. The cure for insect stings is very simple. Scientists have found that the poison injected by the insect is an acid, and hence any alkali is an excellent remedy.

2. REMEDY. Apply ammonia or common soda and water. If there is much inflammation and redness, apply a solution of borax and warm water. Apply with a rag saturated with the solution

GNATS.

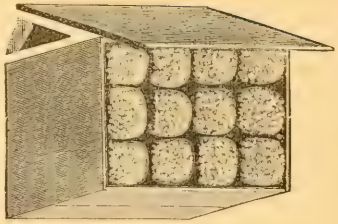
The natural history of the gnats is full of interest, and even the common gnat is well worthy of study; and we almost wonder at finding such a bloodthirsty and annoying being in so delicate and fragile a body. The gnat has a very elaborately constructed offensive weapon in its mouth, the structures of which, although excessively delicate, can do their perforating duty perfectly. All the pieces of the mouth are free, and the jaws are in shape of sharp blades, toothed on their margins. Gnats abound in marshy districts, and where there is stagnant water, for their larva are in the water, but cannot live in running streams. They are very fond of such places as water tubs in gardens, and it does not much matter if the water is not quite fresh.

HOW TO KEEP OUT MOSQUITOES.

If a bottle of the oil of pennyroyal is left uncorked in a room at night, not a mosquito, or any other blood-sucker, will be found there in the morning.

HOW TO DESTROY ANTS ON THE LAWN.

Boiling water, kerosene, or a solution of fresh insect powder in water, poured into the hill, will destroy the inhabitants at once. Where the nests are outside of the house this is a sure remedy



A BOX OF SPONGES.

A NEW WAY OF TRAPPING ANTS.

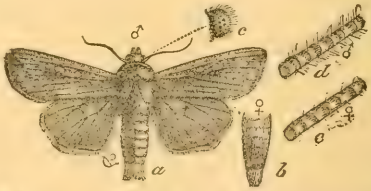
1. Ants are very difficult pests to expel from the house. There have been many receipts and experiments tried, but without any satisfactory results.

2. The ants that infest our houses live only in rotton wood, either in the decayed sills of the house or in rotten timbers and old fences near by. It is best to remove all such hiding places if possible.

3. REMEDY. Ants are very fond of sugar, and anything containing it will attract them. Sweeten a pan of water to a thin syrup, and then dip a large sponge into it, and wring it out. Place the sponge where the ants can get at it; it will soon be filled through and through with ants, then take it up carefully and plunge it into boiling water, and again set it by, saturating it with the thin syrup. A few days' trial will, for a long time, exterminate the annoying pests.

This is the only successful experiment ever tried.

4. A trap more simple but not so effectual is a plate covered with a thin layer of lard and placed where the ants can easily get at it. This trap is more to destroy the little yellow ant than the larger species.



HOW TO DESTROY ALL KINDS OF HOUSE INSECTS.

1. Insects do not grow by imperceptible increase in size as a bird or cat. All insects pass through several changes from the egg to the perfect state. The horrid caterpillar that crawls in our path to-day will soon be seen flitting among the flowers in the form of a beautiful butterfly.

2. To destroy house pests successfully, the history of the insect, from the egg to the perfect state,

must be well known. The successful housekeeper may always be a close observer and a careful student in order to keep her house free from noxious insects.

HOW TO AVOID FLEAS.

1. There are no human fleas in North America. The dog and the cat flea are the only species that annoy us.

2. The eggs of the flea are very small, white and oblong, and are laid on the dog or cat, and, being sticky, adhere to the hair until they are ready to hatch, when they fall to the ground. They hatch in about a week and in less than two weeks attain their growth. They then pass through a pupal stage, and in two weeks more the perfect flea appears. They flourish best in sandy soil.

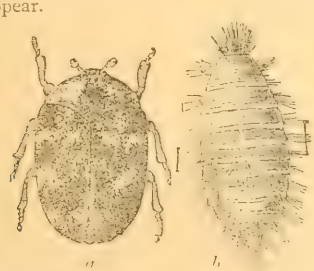
3. REMEDY. Put *olive oil* on the dog or cat or both, as the case may be, and rub it into the hair thoroughly, and after a few hours wash out with warm water and soap.

4. Dalmation Insect Powder rubbed into the hair and sprinkled around the dog's kennel or the cat's sleeping place is also a good remedy.

A DOMESTIC REMEDY FOR DESTROYING FLIES.

½ tablespoonful black pepper, in powder,
1 teaspoonful brown sugar,
1 tablespoonful cream.

Mix them well together, and place them in the room on a plate where the flies are troublesome, and they will soon disappear.



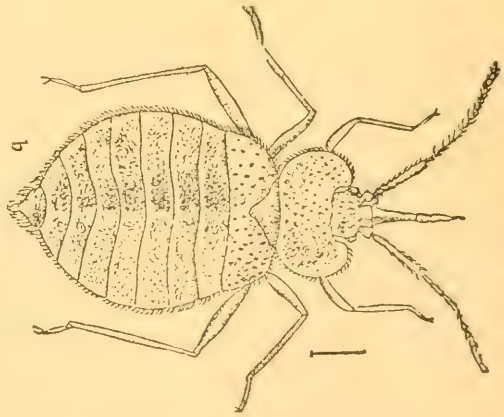
HOW TO EXTERMINATE THE CARPET BUG.

The Carpet Bug (Anthienus Scrophulanæ), or Buffalo Bug, as it is sometimes called, was first noticed in the city of Buffalo, New York.

The grub which does the damage is about one-fourth of an inch in length. It is covered with hair, as shown in the above illustration *b*. It spins no cocoon like the caterpillar, but when full grown the skin splits on the back and shows the insect. A few weeks later the skin bursts again, and the perfect little bug, as shown in *a*, appears. It is marked with red, black and white spots, and is less than one-eighth of an inch in length.

REMEDY. When once in a carpet it is a very difficult insect to destroy. In some houses carpets cannot be used, as they are eaten as fast as they can be put down. Tallowed paper placed around the edges of the carpet is a very good preventive.

When a carpet is cut as if with scissors following the seams in the floor, the simplest and safest remedy is to pour benzine in very small quantities along the seams; also running a hot flat-iron over along the seams of the carpet is very destructive to both the insect and the eggs. Sprinkling the paper with benzine before the carpet is tacked down is an excellent precaution.



HOW TO GET RID AND KEEP RID OF BEDBUGS.

1. The eggs of the bedbug are white in color and oval in shape. The young resemble the parents, and it takes about eleven weeks to get its full growth. Like reptiles, they can live many years without food. Mr. Gœze, of Germany, has kept them six years in a bottle *without* a particle of nourishment of any kind.

2. Keep the bedding and bedstead perfectly clean is the best preventive.

3. REMEDY. Pour hot water into the crevices and then apply benzine to the different parts of the bedstead.

4. Unpurified petroleum mixed with a little water is also a sure remedy. Corrosive sublimate is a very good, but a very poisonous cure.

GUY, 2:06¾.

HISTORY

OF

THE FIRST TROTTING IN AMERICA.

Until 1823 we have but little authentic information that regular trotting courses were established, and not until 1830 were fast trotting courses established. The first public trotting in America for a stake was a match against time for $1,000.

In 1824 A. M. Giles trotted his horse twenty-eight miles in one hour and fifty-seven seconds. The same year Topgallant and Betsy Baker were matched to trot three miles in a harness for $1,000 a side. The race was won by Topgallant by forty yards in 8:42. Topgallant also trotted twelve miles on the road in thirty-nine minutes. The "Albany Pony" did a mile in 2:40. The Treadwell mare did one mile in 2:34, and Boston Blue trotted eighteen miles within an hour. Boston Blue is reported to have been the first horse that trotted a mile in three minutes, it having been done in 1818, so that it will be seen that the Treadwell mare in 1824 had reduced that time to 2:34. Yet for many years after a 2:40 horse was considered extraordinary, as also was any horse capable of going on the road in three minutes.

In 1827, on the Hunting Park Association of Philadelphia, Screwdriver won two heats at two miles, beating Betsy Baker in 8:02 and 8:10, the two best times on record. Dutchman afterwards accomplished the same distance in 7:32½, and Lady Suffolk in 7:40½.

In 1840, on the Long Island course, Jerry beat Whalebone in a three-mile trotting race, in 8:23 the first heat, and 8:15 the second. The best time for two-mile heats that year was 5:22, 5:21 — for three miles, 8:26, 8:27, 8:41, 8:56. At a long distance Sweetbrier accomplished six miles in 18:52.

In 1834, Edwin Forrest, as yet an unentered horse, trotted his mile in 2:31½, beating Sally Miller. The course was one mile ten yards in length.

In 1835 Dutchman made four miles under the saddle in 11:19 and 10:51, and Dolly five miles to a wagon, carrying two men, weighing 310 pounds, in 16:45, and immediately was started again to do ten miles more, which she accomplished in 34:07. The same year the horse Daniel D. Thomkins, under the saddle, trotted three-mile heats in 7:59 and 8:10.

In 1842 Ripton beat Lady Suffolk at two miles in harness, in 5:07 and 5:17.

In 1843 Lady Suffolk made mile heats in 2:28½, 2:28, 2:28, 2:29 and 2:32, which was not again equaled until 1854, when this record was covered by Tacony.

In 1844 Cayuga Chief made the first half-mile in a race in 1:15, the fastest yet made in public, and Fanny Jenks accomplished 100 miles, in harness, in nine hours, thirty-eight minutes and thirty-four seconds. The slowest mile was done in 6:25; the fastest in 4:47. At the end of the race the mare was driven an extra mile in 4:23.

In 1849 Lady Suffolk trotted nineteen times and won twelve, beating Gray Eagel and Mac twice, Pelham five times, Lady Sutton twice, Trustee four times; also beat Black Hawk, Gray Trouble, Plumbay and other horses. This year a Canadian mare, Fly, is said to have been driven from Cornwall to Montreal, ninety miles, in eight hours and fifteen minutes. Fanny Jenks made 100 miles in nine hours, thirty-eight minutes, and thirty-four seconds. Fanny Murray trotted 100 miles in nine hours, forty-one minutes and twenty-three seconds.

In 1852 Tacony won twelve races, beating all the fast horses of the day, making a single mile in 2:26, two miles in 5:02, and was beaten only twice. As a three-year-old, Ethan Allen trotted this year in 3:20. Flora Temple this year won her first purse, on the regular turf, in 2:41.

In 1853 the entire sporting interest was centered in Flora Temple and Tacony. Flora this year beat all the best horses of the day, winning seventeen times. Her best time at mile heats was 2:27, 2:28, and at two-mile heats 5:01½, 4:59. This year Tacony trotted a mile in 2:25½.

In 1856 the contest lay principally between Flora Temple and Lancet. Flora made eleven races, winning nine, beating Lancet four times in harness, Tacony going under the saddle. This year Flora Temple lowered the one mile record to 2:24½.

The Mother of Trotters, Flora Temple.

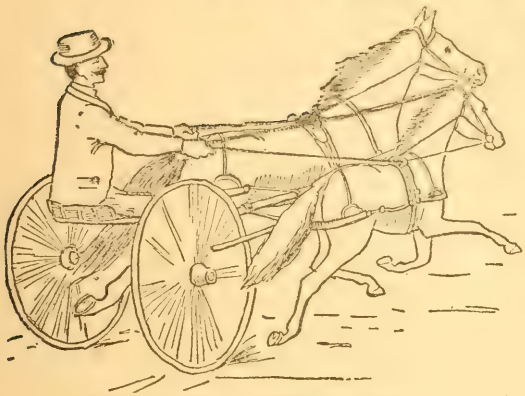
HOW TO BREAK AND TRAIN COLTS.



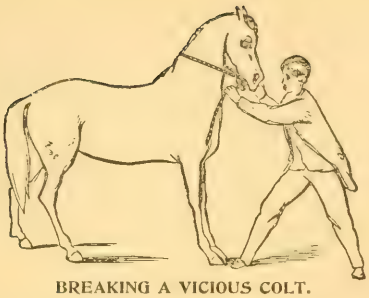
A COLT'S FIRST LESSON IN TROTTING.

1. It can be truly said that as soon as a colt is weaned his training begins, or should begin, for I hold that it is the early handling which makes him a tractible and domestic animal. It is education and not hereditary influence that man has had over him for thousands of years that makes him submissive. It is known that when a young white child, one whose parents have led a civilized life for a thousand years or more, has been stolen and reared to manhood by wild Indians, that the only difference between him and his adopted parents is color. The horse, dog and hog I know from personal observation will turn out the same way. Hence I say that it is very important that colts should be handled early. In fact, I believe they should be broken to the halter before they are weaned.

2. **Feeding.** Several months before weaning, the mare should be fed on or near the ground where the foal can have access to the feed-box; then when taken from his dam he will not fret, and instead of running around looking for her, he will go to his feed-box and console himself by eating oats. All through the first winter, the colt should be provided with good, comfortable quarters at night, and turned out in the pasture or large field during the day, so that he can take his exercise, which is indispensable to good health.

3. **Bridling and Driving.** After the colt is halter broke, slip on the bridle and back saddle, and after the colt is used to this rigging drive him around with the lines until he learns to go straight, back and turn. Now begin his primary trotting lessons by putting him alongside a steady-going old mare to cart or sleigh. Simply snap the lead strap, about two or three feet long, to the shaft near the girth and have a long rein leading from the other side. Then take your seat and start the pair. It is surprising how quickly the colt learns to fall in line with the movement of the mare. After awhile put on the breeching and traces, fasten them securely tight on the girth and have a ring in it near the shaft-bearer; buckle a strap ten or twelve inches long, with a snap on the other end, to the shaft of the vehicle and snap it to the ring in the colt's girth. Now use a pair of long reins on the colt, and so permit the free use of his head. He has no weight to draw and will soon drop into a steady stride, and unwittingly grow way-wise. Presently his muscle and strength are sufficient to enable him to go alone. About the first of the year try him to a light cart or sleigh. Begin with slow, short lessons. This is the critical period of the colt's career. With proper handling he may become a race horse or a plug; all depends upon the breaking.

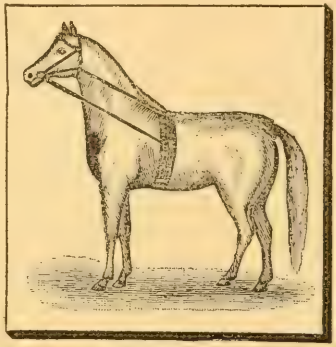
4. **Intelligence of Horses.** — Trainers, jockeys, and many owners must know that the colt is a very poor reasoner. Mentally he is the weakest of all our domestic animals except the sheep; therefore, when once he is taught a trick or is allowed to do a certain act not wanted of him, it is with great difficulty that he can unlearn what he has already learned, on account of his mental weakness. A horse kicks his master to death when turned upside down with foot in stirrup, because in that position the horse does not know what his master is, and suffers from imaginary fear. He kicks the shafts of a buggy until his legs are broken, because he does not know that the shafts are harmless and that he himself is doing the damage. He runs away under the saddle or in the harness, because he hasn't sense enough to know better. I heard a man, and one who claimed to be a horseman, say, not long ago, that a certain horse has more sense than the average boy. I saw the same horse shortly afterward nearly turn a buggy over, trying to get away from a piece of paper that was fluttering across the road. I asked this gentleman the following question: "Suppose a boy should butt his brains out running away from a piece of paper, what would you think of him?" "Why, he would be an infernal fool." "And so is a horse," said I, "who frightens at nothing." It is our love and admiration which makes him so smart and beautiful in our eyes, like the woman and her babe, always the brightest and the prettiest. Affection warps the judgment.



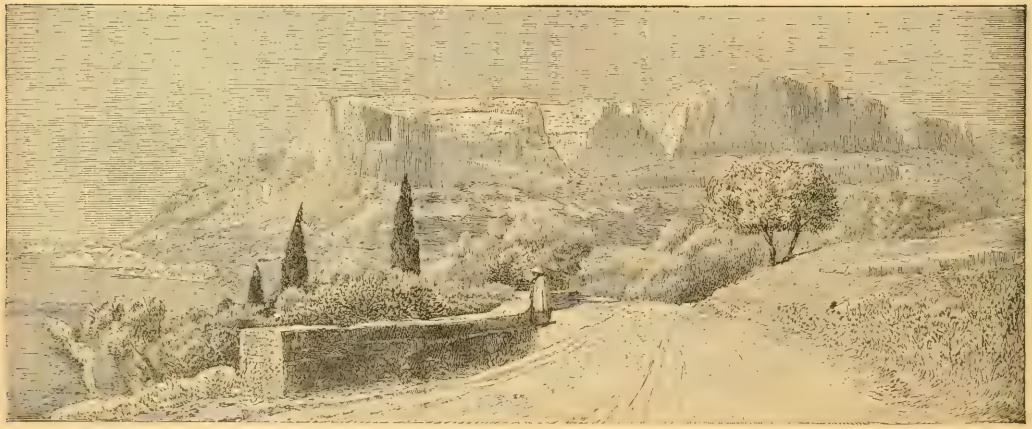
BREAKING A VICIOUS COLT.

Tie a Rope with a Slip-Noose on Lower Jaw, then Bring It Over the Neck as Above.

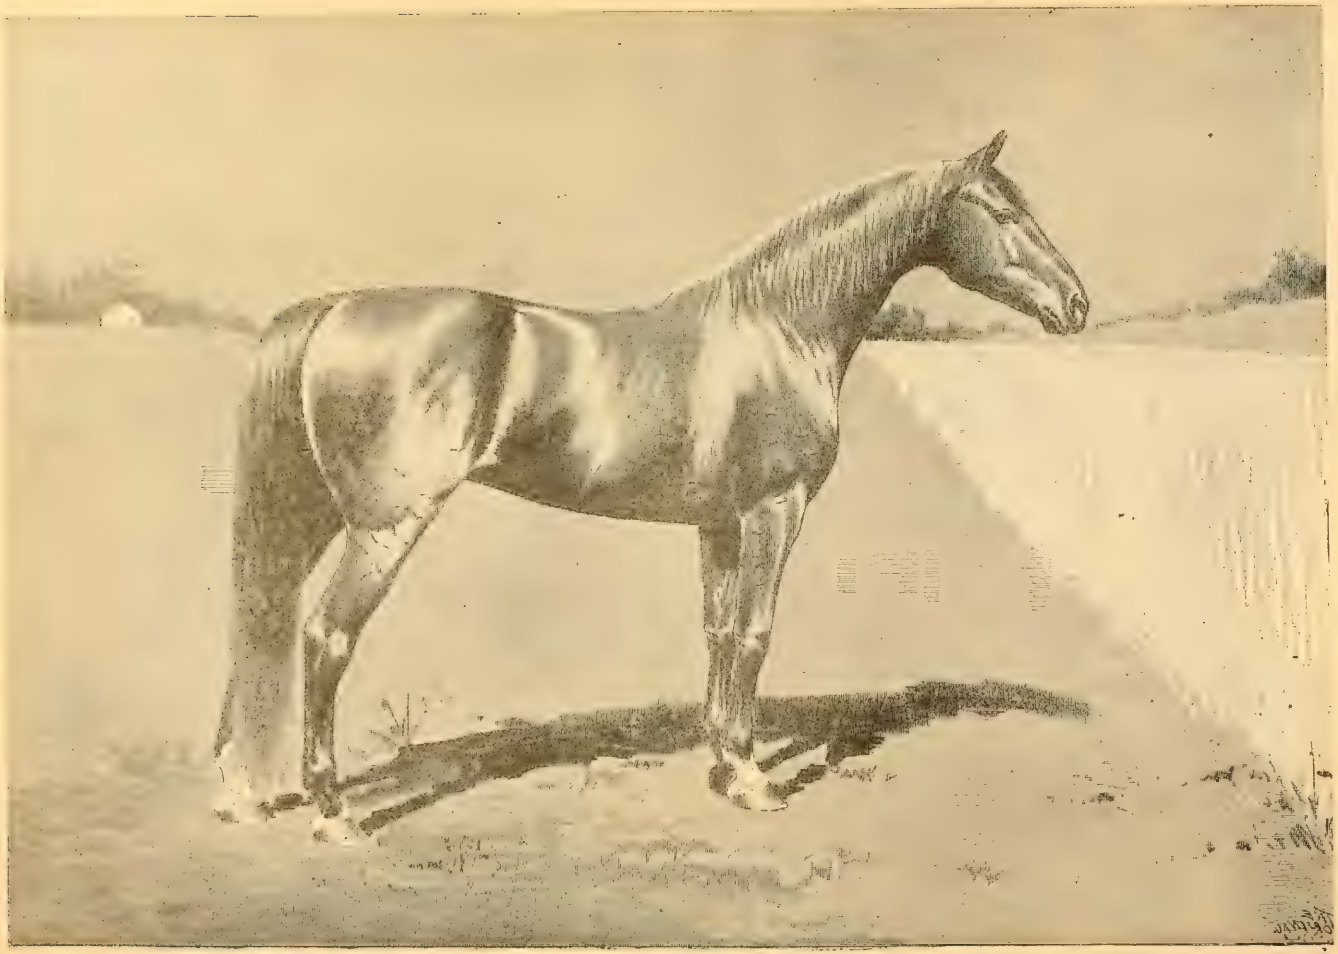
5. Ignorance of Drivers. — When trainers and jockeys once fully understand the horse, then training will become more perfect than it is now. There is too much superstition and not enough intelligence among the average trainers at the present time. They often do things without knowing why they do so. All follow each other without investigation or inquiry. Training has improved by slow degrees, because the trainer's mind heretofore has groped in the midnight of ignorance. For years they sweated the horse to death, yet they could not give any suitable reason for their practice, and to-day they follow many practices which are not sound. For instance, when a horse is to be given a trial he will be galloped, say a mile and a half or two miles, and the last quarter the horse will be sent along at nearly and sometimes full speed; after a breathing spell and a little rubbing he is sent on his trial. Often a horse is given a sharp run just before he starts in a race. Both of these practices are against reason and common-sense. A horse should never be speeded just before a race. It would be just as proper to have a fighter make four or five rattling rounds with some one just before going into the ring to fight for his life. The ordinary gallop of the horse in condition is sufficient for a warming up, and fast work just before a race is a waste of force.



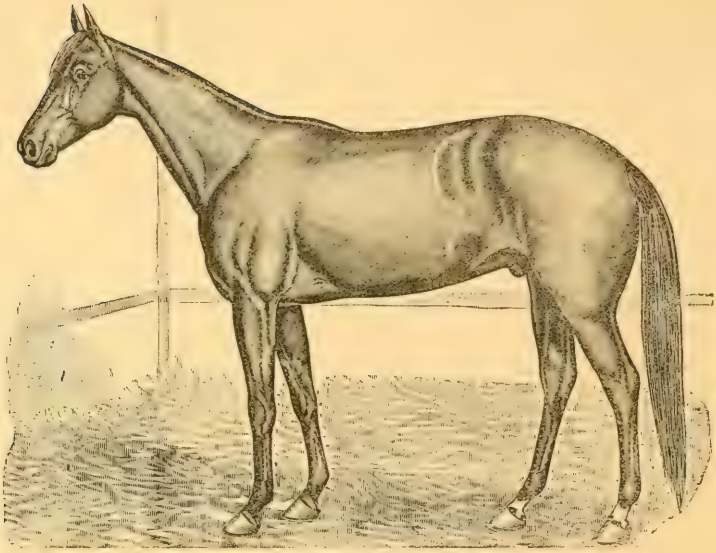
Bitting Harness.



THE DESERTED LAND



THE BAY TROTTING STALLION RYSWOOD. 2:16. By BELLWOOD---756. SON OF BELMONT 64.



JAY EYE SEE.

HOW TO TELL A GOOD HORSE, AND PRACTICAL RULES FOR PURCHASING.

1. In a good horse the ears must be small and pointed and wide between. The eye must be large and full and stand out prominently.

2. An intelligent horse must have considerable width between the eyes. The nostrils must be large and thin, neck long and tapering, with stout heavy muscles on the top and thin through the middle.

3. A good horse must always have a short back, broad and long hips, and close jointed. A good traveler must have proper proportions, namely: the withers should be exactly midway between his ears and the coupling of the hip. From the point of the withers to the shoulder should be just as long as from the coupling over the kidneys to the point of the hip by the tail.

4. A horse which has thick ears; small, flat, sunken eyes; small, thick nostrils, and is narrow between the eyes and ears, with a thick, clumsy neck or a curved nose, is a horse that is liable to be vicious, clumsy, awkward or balky, and never can be taught anything.

5. The first thing for the purchaser to observe are the eyes.

6. If the eyes are clear and full and brilliant, the horse possesses good sight; but when the eyes are flat or sunken and have a dead and lifeless look, the horse will probably lose his sight in the course of a few years.

7. The iris or circle that surrounds the sight of good eyes should be distinct and of a pale cinnamon color.

8. The teeth should be sound and as to age, see *Teeth* in another part of the book.

9. The feet should be smooth and tough, of a middle size, without wrinkles; the frogs horny and dry.

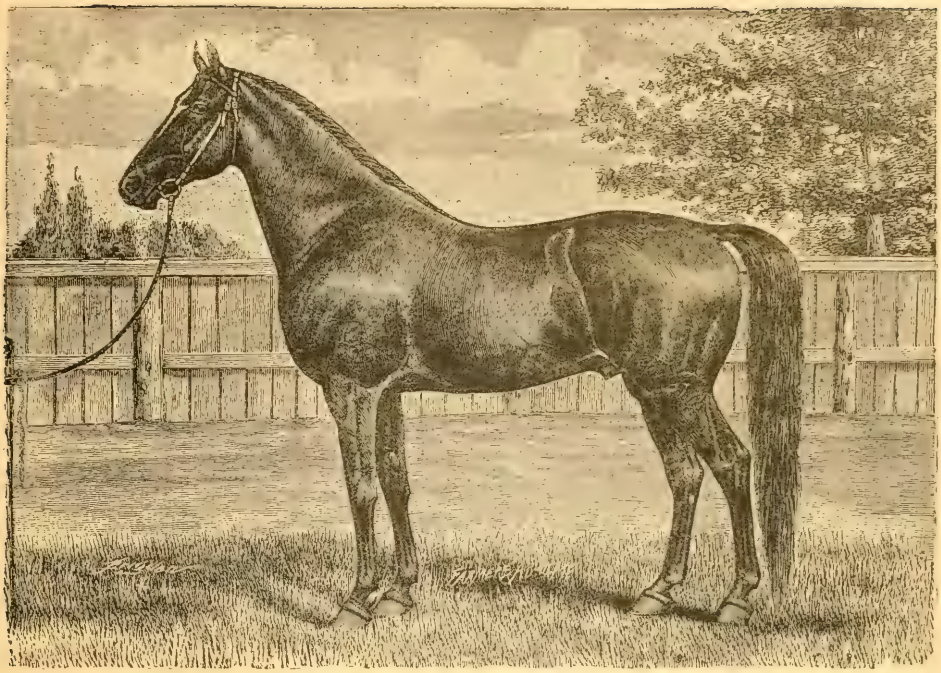
10. A good horse for traveling or service must be wide across the chest.

11. The back should be straight or have only a moderate sinking below the withers. The ribs should be large, flanks smooth and full. A horse for strength and durability should have considerable width across the hips.

12. A broken-winded horse pinches in his flanks, with a very slow motion, and drops them suddenly. A horse with the heaves can be easily detected by noticing the movement of the abdomen in breathing. Always have the horse travel by walk, trotting and running, to see that there is no lameness.

13. A horse that travels with his feet very low is very apt to be a stumbler. See that the horse lifts his feet well in taking a step. To remedy the difficulty of stumbling put on heavy shoes, it will make the horse lift his feet higher. See that the horse is gentle by placing your hand on different parts of the body.

14. Remember that he who buys a horse needs a hundred eyes.



THE STANDARD BRED TROTTER CLONMORE, No. 5288.

Clonmore is by Cannaught, 2:24, a Son of Wedgewood, 2:19. His Dam, Hopeless, is by Hermes, 2:27½.

BUYER'S RECEIPT.

The buyer in the purchase of a horse should always demand the following receipt:

$200.00 *Syracuse, N. Y., May 12, 1895.*

Received of John D. Morehouse, Two Hundred Dollars, for a dark brown Mare, warranted only six years old, sound, free from vice, and quiet to ride and drive.

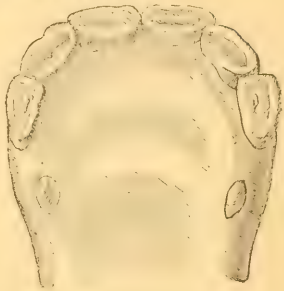
Frederick E. Donaldson.

N. B.—He who uses this receipt will never be swindled in the purchase of a horse.

HOW TO TELL THE AGE OF THE HORSE.

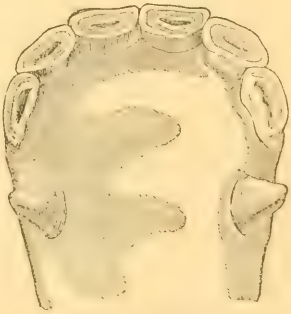
Two Years' Teeth.

Three Years' Teeth.

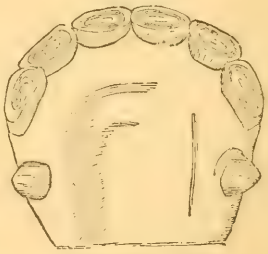


Four Years' Teeth.

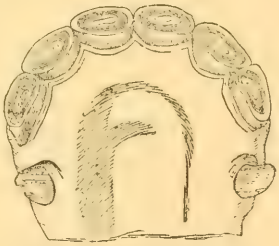
Five Years' Teeth.



Six Years' Teeth.



Seven Years' Teeth.



Eight or Nine Years' Teeth.

The only way to determine a horse's age is by the appearance of the teeth. They undergo certain changes, which any careful observer will easily notice. A horse has 40 teeth—24 grinders, 12 front teeth and 4 tusks. A mare has 36 teeth—24 grinders, 12 front teeth, sometimes tusks, but not often.

1. Eight to fourteen days after birth, the first middle nippers of the set of milk teeth are cut, four to six weeks afterwards the pair next to them, and finally, after six or eight months, the last.

2. All these milk teeth have a well defined body and neck, and a slender fang, and on their front surface grooves of furrows, which disappear from the middle nippers at the end of one year, from the next pair in two years, and from the incisive teeth (cutters) in three years.

3. A New Method.—

14 days old, 4 nipper teeth.
3 months old, 4 middle teeth.
6 months old, 4 corner teeth.
1 year, cups leave nipper teeth.
2 years, cups leave middle teeth.
2½ years, sheds nipper teeth.
3 years, full size nipper teeth.
3½ years, sheds middle teeth.
4 years, full size middle teeth.
4½ years, sheds corner teeth.
5 years, full size corner teeth.
6 years, large cut in corner teeth, small in middle teeth, and still smaller in nipper teeth.
7 years, cups leave nipper teeth.
8 years, cups leave middle teeth.
9 years, cups leave corner teeth.
10 years, groove in upper corner teeth.
15 years, half-way down upper corner teeth.
20 years, at the bottom corner teeth.

4. The teeth grow in length as the horse advances in years. But at the same time his teeth are worn away by use about one-twelfth of an inch every year, so that the black cavities of the center nippers below disappear in the sixth year, those of the next pair in the seventh year,

and those of the corner teeth in the eighth year. Also the outer corner teeth of upper and lower jaw just meet at eight years of age.

5. At nine years old, cups leave the two center nippers above, and each of the two upper corner teeth has a little sharp protrusion at the extreme outer corner.

6. At the age of ten, the cups disappear from the adjoining teeth.

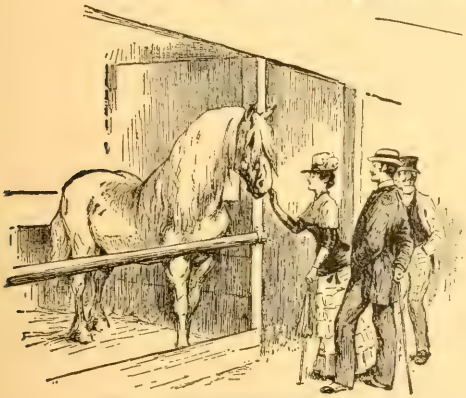
7. At the age of eleven, the cups disappear from the corner teeth above, and are only indicated by brownish spots.

8. The oval spots become broader, and change, from the twelfth to the sixteenth year, more and more into a triangular form, and the teeth lose, finally, with the twentieth year, all regularity.

9. The tusks, or canine teeth, conical in shape, with a sharp point, and curved, are cut between the third and fourth years, their points become more and more rounded until the ninth year, and after that, more and more dull in the course of years, and lose, finally, all regular shape.

Mares have, frequently, no tusks, or only very faintly indicated ones.

HOW TO TRAIN, DRIVE AND BREAK HORSES.



THE FAVORITE DRAUGHT-HORSE.

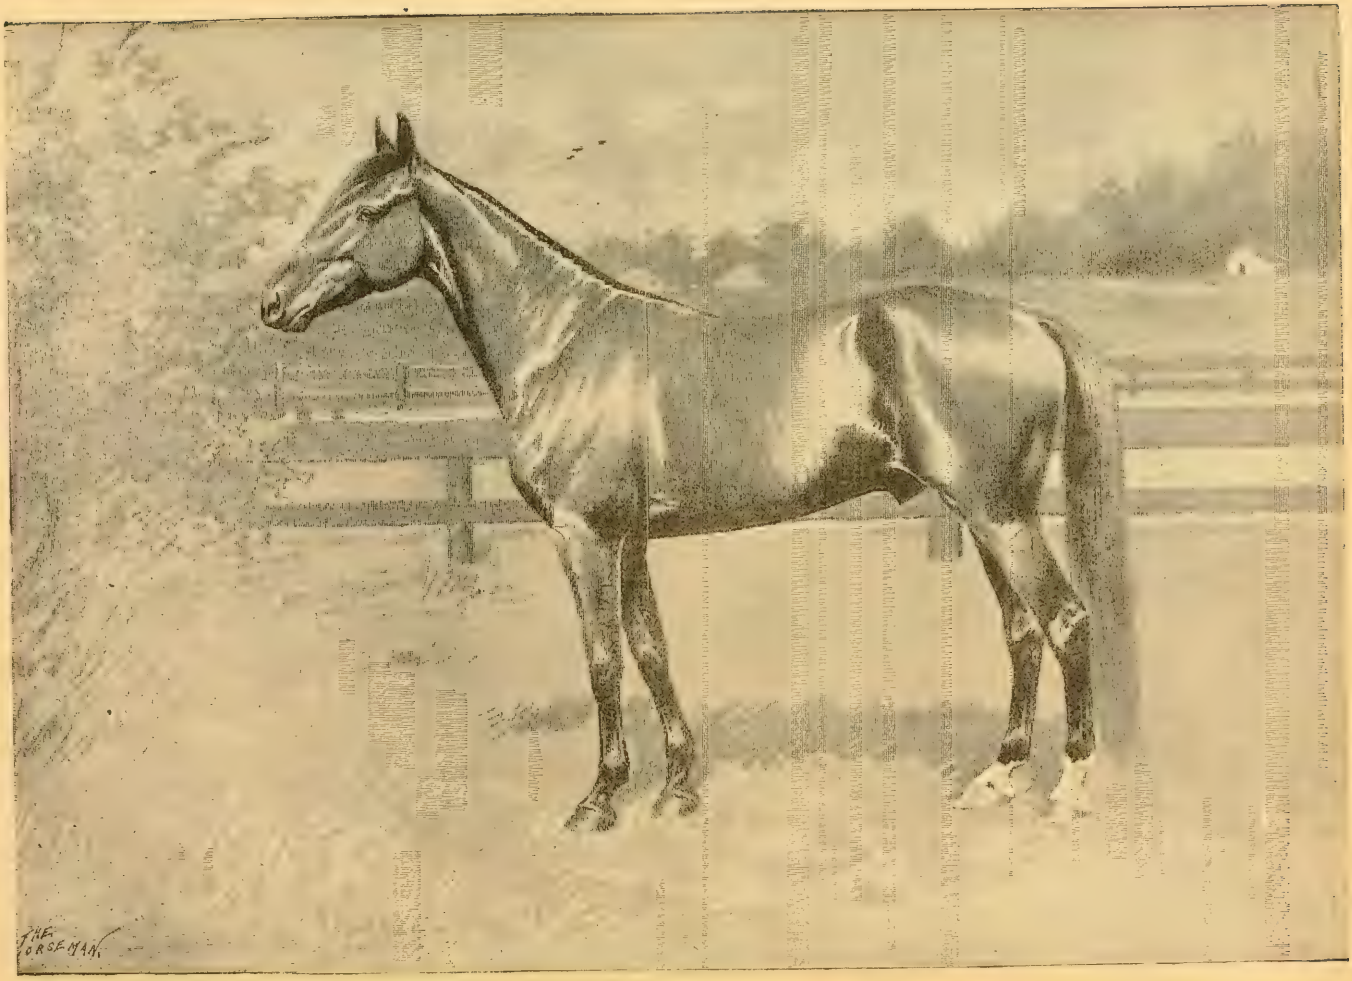
TEACHING TEAMS TO PULL.

It is a real pleasure to have a team that can be relied upon to pull whenever wanted to do so. Any team, if not of a too highly nervous temperament, may be trained to perfect reliability. We need first of all and forever after to recognize that the horse has a mind and at least the mental qualities of memory and affection. The consideration of paramount importance, this matter, according to the view of a writer in *National Stockman*, is to develop the team's confidence in themselves and in their driver. It is just as true of a horse as of man, that he will not exert himself greatly over what he has no hope of accomplishing. But different from man, the horse thinks of previous loads instead of the one to which he is attached. This is the reason a balky horse is apt to refuse to pull a very light load. He has no way of estimating his load only by pulling upon it. Hitch a horse to a very heavy load, let him pull upon it, then transfer him to any empty wagon and start him. You will see him gather himself for a heavy pull. He has in mind the heavy load. Had the horse been stalled with a heavy load, and whipped until the driver and horse were both certain he could not pull it, you would have a horse thoroughly broken not to pull. This writer says:

"Let me impress the truth of this by calling to mind another illustration of the result of similar treatment. I have seen men who had horses given to pulling upon the halter, put one on them they were confident the horses could not break, and then whip them over the head in order to make them pull. Nearly always when a horse finds he can not pull loose he will walk up to the hitching post. I have heard men argue that a horse could be so thoroughly broken in this way that a tow-string would hold him. There is some truth in it, though not all horses are to be managed in the same way. A horse of nervous temperament should never be excited. They will always do their best in a perfectly calm state of mind.

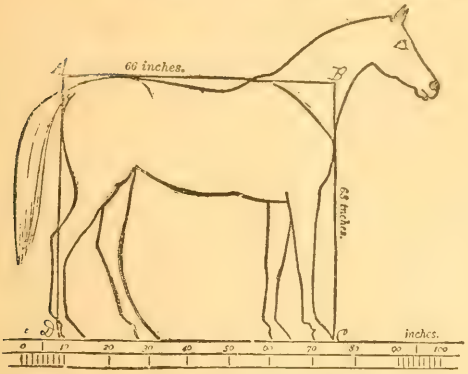
"The drivers of fast trotters have taught us this. They have also learned that to keep the horse calm all men in attendance must remain so. No passionate, profane man ever developed great speed in a horse nor trained a powerful pulling team. With these general principles in view, and proper attention to details, any team may be trained so that it will be a delight to work them.

"Have a definite and small vocabulary to use with your team, and always use the same word for one purpose. Keep the same two horses working together, and always on the same side. Use open bridles, so that the team can see what is going on around them. Keep all attachments strong, that your team will not be in fear of straining themselves through something breaking. Use close-fitting collars and harness, and never allow a horse to become sore from any part of the harness. Teach your team to start together. Keep them strong and in good spirits by good and regular feeding, and good care in every particular. Let them come to heavy pulling gradually, and not at all until their bones are well matured."



THE BAY PACING STALLION "ONLINE." TWO YEAR OLD RECORD 2:11, By SHADELAND ONWARD.

HOW TO PICK OUT A TROTTING HORSE.



Horses for speed must conform to the following proportions. No noted trotter has ever varied to any extent from the following figures:

	INCHES.
....Height at withers and croup	63
Length from shoulder-point to quarter	66
From the lowest part of the chest to the ground	36
From the elbow-point to the ground	39
From the withers to the pole, just behind the ears, *in a straight line*	30
The same measured along the crest	32
Length of head	22
Width across the forehead	9½
From the withers to the hip	22
From the stifle to the point of the hock, in the attitude shown in the plan	28
From the root of tail to stifle-joint	26
From the point of the hock to the ground	22½

Girth varies from 76 to 80.

Circumference of arm just below the elbow, 16½ to 18 inches.

HOW TO TELL THE DISPOSITION OF A HORSE.

A STUBBORN AND MULISH HORSE.

1. Every one should remember that a horse can not understand all language or words of command, except so far as he is taught to associate them with actions, consequently a horse can not know what to do until he is taught.

If a man were to sit on a block and simply read the word "whoa to a horse, he imght do it indefinitely without teaching him its meaning; but if a horse were moved, set in moderate motion, and immediately after command the reins were pulled, he would soon be taught to stop. The same performance is necessary in teaching a horse to back. For the same reason the team on a street car starts and stops at the sound of the bell; it is because they have become accustomed to being started and stopped at that time

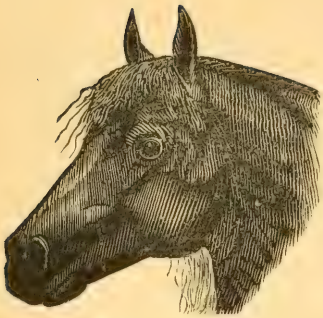
2. VICIOUSNESS.—To a certain extent some horses are vicious, but the fault is not so much in the horses, as in the fact that they have not been properly handled or carefully trained.

Many bad dispositions in horses have been brought on by the bad disposition of those who had them in charge. Some horses are dull, while others are intelligent; some are more easily frightened than others, consequently great care and judgment should always be exercised in training the horse. For good training largely makes the horse.

A VICIOUS HORSE.

AN EXCITABLE HORSE.

Fig. 3 is an animal that will tax the strength of his owner in order to keep him in proper subjection. He is full of life and excitable, and is liable to be very skittish, and will run away at any opportunity without considering the interest of the owner.



AN INTELLIGENT HORSE.

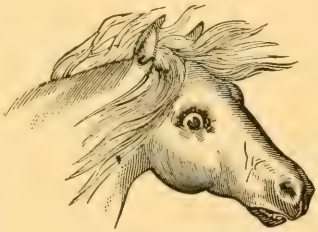
Fig. 4 represents a very intelligent horse, kind and quiet to ride and drive; yet possessing a full degree of spirit. He is a horse that can be trained to be a favorite, and will also appreciate good care.

A DULL AND STUPID HORSE.

Fig. 6 represents one of those indifferent specimens of horses, heavy, dull and stupid. He can be driven, but his gait makes it an annoyance rather than a pleasure, for it is almost an impossibility to get him to go faster than a walk. He is a horse that tries the patience of a saint, when behind time for a train.

INTELLIGENCE.—There is just as much difference in intelligence of a horse as there is difference in men. Some horses can be taught most anything, while others are apparently without any faculty of intelligence.

The horse in Fig. 5 requires a gentle but strong hand in order to get the best possible results. He is high strung and nervous and will never under any circumstances bear the use of the whip. He will go until he falls in his tracks.

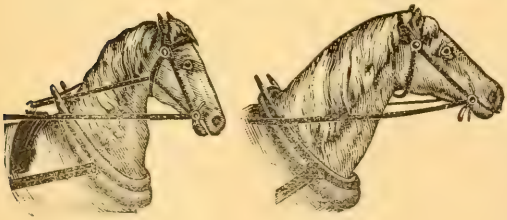


A HICH STRUNG HORSE.

A NERVOUS HORSE.

Fig. 7 represents a horse that is difficult to manage. He is not vicious, but very nervous and exitable, and when properly handled will become subdued and kind; but unless properly trained he is liable to kick with his hind feet and strike with his forward feet, and will bite if an opportunity is offered. He is what may be called an untrustworthy horse, but the law of kindness will subdue him, but when in the harness proper vigilance must always be taken.

THE USE AND ABUSE OF THE CHECK-REIN.

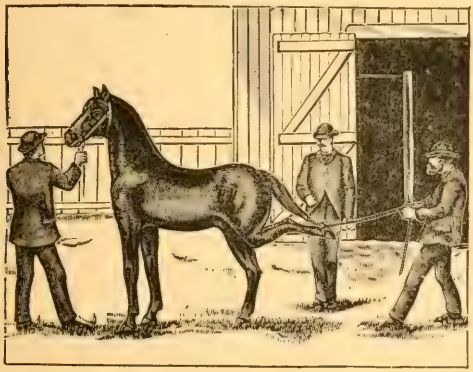


UNNATURAL. NATURAL.

An overdrawn check-rein should never be used. It is nothing but cruelty to animals and ought to be prohibited by law. There is only one purpose for which a check-rein may be used and that is to compel a horse to keep his head off the ground, and then it is not necessary to be tightly drawn. A trotting horse can be steadied by it, but keeping a horse's head drawn up in a strained position all day is nothing but cruelty. The effect can easily be illustrated by a person having his head thrown back in this manner for hours at a time. The pain caused by a check-rein ought to create some sympathy for the poor dumb animals, who have not only to endure the pain for hours, but for days and weeks in succession.

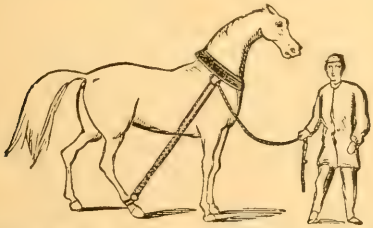
A horse of style will show his natural condition without fastening his head in an unnatural position. Let us remember that the poor brute which cannot speak for itself is dependent entirely upon the mercy of man, and the torture which we inflict upon the suffering animal will sometime, no doubt, be meted out to us in some other way.

REMEDIES FOR KICKING HORSES.



HOW TO SHOE A KICKING HORSE.

The dangerous work of shoeing a kicking horse can be made very easy. Take a small bolt or wooden pin five inches long, and double the horse's tail over it and tie it firmly; then buckle a strap around the hind feet below the fetlock joint having a ring in the strap; then tie a rope over the pin and run the end of the rope through the ring on the hind foot, and with the end in hand hold the rope tightly a little distance from the horse; then say to the horse; "Lift up your foot," and tighten the rope at the same time. After a few efforts to release himself he will give up all resistance and will soon be perfectly cured.

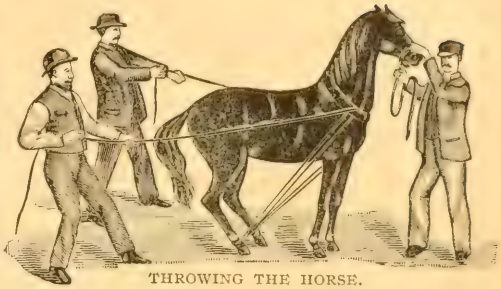


Another Method for Shoeing a Kicking Horse.

The horse with kicking habits while being shod can be easily managed. Place the rope as shown in the above illustration, and recollect that kindness and gentleness in training a horse is the only method that will overcome the horse's fault.

STRENGTH OF HORSES DRAWING A LOAD.

What one horse can draw on iron rails on a level road, it will take five horses to draw the same load on ordinary stone pavement, seven on good cobblestone, twenty on ordinary earth road, and forty on a sandy road.



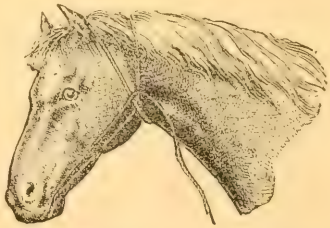
THROWING THE HORSE.

HOW TO BREAK A HORSE FROM KICKING.

In the above illustration you will find a common method for throwing a horse.

Put on a strong bridle so that the horse can be easily held, and attach the ropes, as shown in the above cut. After throwing the horse a few times, each time letting him rise at his own pleasure, at the same time speaking gently and handling him as much as may be deemed necessary, the horse will soon become exhausted, and most anything can be placed at his heels, and he will not make any effort to kick. The ropes attached will keep him from extending his legs, and by that means he will soon learn to stop making the effort.

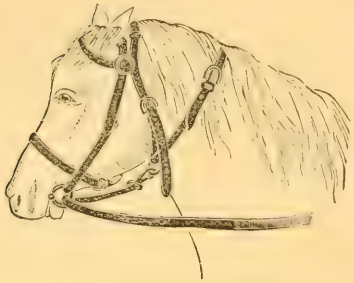
One lesson a day, for one week, will cure the most vicious horse.



PROF. GLEASON'S EUREKA BRIDLE.

(FOR SUBDUING VICIOUS HORSES.)

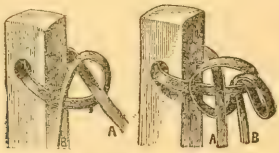
This is one of the most successful bridles ever applied for the management of vicious horses, or for the purpose of doctoring the eyes or making surgical operations. It is made as follows: Take a small but strong piece of cord ten feet long and about one-eighth of an inch in diameter, with a slip noose in one end. To put on the bridle, first slip the noose around the neck, pass it through the mouth over the tongue, from the off side; then through the noose on the near side, and pull forward firmly; next over the head just behind the ears, from near side; then under upper lip, above upper jaw from off side, pass through second cord, and fasten firmly in a bow-knot. This bridle will hold any horse under any circumstances.



How to Drive Pullers and Luggers on the Bit.

1. Professor Gleason, the most noted horse tamer on the continent, if not in the world, recommends the following two methods for horses that pull and lug on the bit: Take a strap and buckle around the neck with a ring underneath the neck sewed on to the strap; now take the reins and pull through the bit rings and buckle into the ring on the strap that is around the neck. Here you have a purchase on the horse's lower jaw, that will enable you to hold the worst puller with ease.

2. The second method is as follows: Take a strap about an inch wide and eighteen inches long, with a ring one and one-half inches in diameter sewed on to each end and two smaller rings running loose on the strap. Take and place the middle of the strap directly under the horse's lower jaw and bring the ends through the mouth from opposite sides. Buckle the reins into the larger rings and the check pieces of the bridle into the smaller ones. This makes one of the most effective appliances for a puller that can be used.



THE SAFEST WAY TO TIE A HALTER.

How best to tie the halter, strap or rope, or whatever it may be, is shown in two cuts herewith. The first shows the first stage. The knot is completed by pulling on the loop until the knot is tight. Then pull on the free end of the strap B, until the loop is just large enough for B to pass through it. Pass B through and draw it through as far as possible. The horse cannot possibly get this knot open; and the harder he pulls the safer the knot. To untie the knot, draw B from the loop, and then a sharp pull on B will open the knot. A is the halter end of the strap.

HOW TO MANAGE A BALKY HORSE.

A balky horse is generally the result of a balky driver. A high-spirited horse with bad management, is liable to become balky.

REMEDY.—Lead the horse kindly about with a halter, petting him occasionally, and let him know that no harm is awaiting him. Then put on a harness and drive him, being very careful to have him observe every command, at the same time doing it very gently. Then hitch him into a light buggy and drive him awhile. By careful treatment in this way he will sooon be taught to draw steadily and strongly at any load. The trouble with balky horses is that a driver will soon become provoked, and by slashing and cracking the whip, and abusing the animal, it strengthens the bad habit instead of overcoming it. There is no such thing as a balky horse, if kind and proper treatment is administered.

HOW TO KEEP A HORSE FROM PAWING IN THE STALL.

Some horses have the habit of pawing in the stall, yet a simple remedy will break up the habit in a few nights. Take a small strap and buckle around the horse's leg above the knee; now take a small piece of rawhide and tie it to the strap which is buckled around the horse's leg above the knee; on the other end tie a small block of wood, say six inches long and about three inches square, and let it hang down about seven inches, so that every time the horse paws, the block will strike its shin; it will be harmless but it will remind the horse that there is trouble, and a few nights will completely cure the nuisance.

HOW TO TEACH HORSES TRICKS.

1 It is an excellent practice to teach a horse a few tricks. An intelligent horse will learn very easily and will enjoy training. It will create more affection and interest for the horse. Most of the tricks are very simple and easily taught.

2. *To make a Bow.*—Take a common pin and prick him in the breast very lightly. The horse will move his head up and down the same as he would in brushing a fly from his breast. Repeat this until the horse will move his head up and down at the slightest movement of the hand, and in a few lessons he will make a bow whenever spoken to.

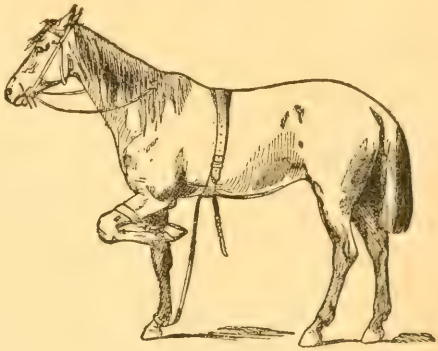
3. *To lie down.*—To make a horse lie down, use the strap as shown in "Controlling Vicious Horses," and throw the horse or colt quickly, at the same time telling him to lie down, but be sure and always speak the words emphatically *to lie down* as you throw him. Use any of the common methods for throwing a horse.

4. *How to sit up.*—First put a bridle on the horse and cause him to lie down. Then step behind him and place the right foot on his tail, keeping the reins in your hands and by standing up on the horse's tail and pulling the bridle rein tightly you can teach an intelligent horse to sit up quite readily.

5. *To shake hands.*—Place a strap around the horse's leg next to the hoof, and stand directly in front. Then say shake hands, at the same time pulling the strap and pulling his foot forward. He will soon learn to do this without the strap if the necessary patience is applied.

6. *To say no.*—Stand at the side of the horse, holding a pin in your hand, and prick him lightly in the withers and the horse will shake his head as though he were driving away a fly. You can soon train your horse to do this so nicely that he will shake his head at the word of command.

7. *Various Tricks.*—A horse may be taught to do many things, if patience and perseverance is practiced on the part of his trainer. A colt may be taken when very young and taught many interesting and amusing tricks. A horse can be taught to be driven without bridle or lines, or to jump over a pole or fence, and many other interesting and amusing things. Patience, perseverance and kindness will do most anything with an intelligent horse.



HOW TO MAKE A HORSE LIE DOWN.

Fasten the fore-foot of the horse as shown in the above illustration. Then put a surcingle around his body and fasten one end of a long strap around the other fore-leg, just above the hoof. Place the other end under the surcingle, so as to keep the strap in the right direction. Take hold of it with your right hand; stand on the left side of the horse; take the bit in your left hand, pull steadily on the strap with your right; bear against his shoulder till you cause him to move. As soon as he lifts his weight, your pulling will raise the other foot, and he will have to come on his knees. Keep the strap tight in your hand, so that he can not straighten his leg. Hold him in this position and turn his head towards you; bear against his side with your shoulder, kindly but steadily, and in about ten minutes the horse will lie down perfectly conquered. Then take off the strap; straighten out his legs; pet him for a few minutes, and then let him rise. Repeat this about twice a day for a few days, and the horse will lie down whenever the proper signs are given him. If the horse has fought hard in going down he will usually lie very still, and you can scrape the sweat off and rub him down and he will lie perfectly quiet. In this position you have the opportunity of making him perfectly familiar with you, and the more you fondle him and reconcile him to you, the better. A vicious horse is thus conquered, and an intelligent horse is made to perform a convenient and pleasant trick.

THE EX-CHAMPION TROTTING STALLION NELSON, 2:09.

Known as "THE NORTHERN KING,"

DRIVEN BY HIS OWNER, C. H. NELSON, WATERVILLE, MAINE.

HOW TO BREED AND CARE FOR HORSES.

1. If a horse shows signs of blind-staggers or megrims, give it doses of epsom salts and bran mashes and exercise.

2. Castor oil rubbed on warts will often cause them to disappear.

3. Do not breed unsound mares. The colts will not pay.

4. Don't put a tight check on the horse. It is not a thing of beauty, but of cruelty.

5. If you think it is a trotter, sell it at the first good offer.

6. A fretting mare will produce a fretting colt.

7. Disposition is a great deal in breeding animals.

8. The farmer with only one team should have the colts come in the autumn.

9. Linseed meal acts as a digester. It is an excellent food to open the pores, hence a good spring food.

10. If the horse bloats and has colic it is a sure sign of indigestion. A very little magnesia and a little salt mixed with its grain, would help to correct the flatulency.

11. A horse will not eat out of a sour trough.

12. Do not think of using a common stallion because he is cheap. His get will be cheap to sell and dear to rear.

13. Carrots and bran mashes will help the mother when the little foal comes.

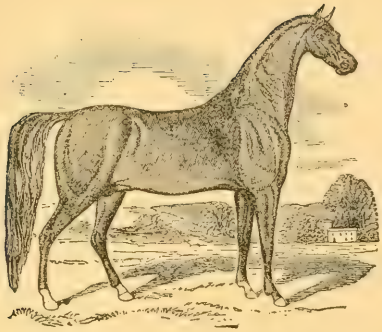
14. Feed the horse which is inclined to the heaves very little hay, and always wet this, and wet the grain. If the case is bad, cut the hay and mix it wet with the grain. The heavy horse should never be fed more than five or six pounds of hay a day. A half pint of raw linseed meal put into the feed, if the horse will eat it, will do it good.

15. A horse should be thoroughly groomed every day. It improves the health as well as the looks.

BREEDING HORSES.

Future Is Encouraging for Those Who Employ Right Methods.

The mare has generally been overtaxed. One colt in two years is enough for ordinary stock. It should be sufficient, as a rule, in the case of extra choice mares. The anxiety to breed a span that shall be "full brothers" may be in some instances pardoned where this rule is disregarded. Then, however, two seasons of rest could be taken to good advantage. There is a fair profit in extra good colts when a very choice mare produces eight or ten of them in a life-time. A painstaking stockman who looks after details carefully need seldom fail in obtaining regular results in alternate years. The man who has irregular breeders and is careless about details might as well continue the sickly effort yearly, as his returns will be below the average of the one who breeds only in alternate years. The 12-year-old mare that has produced regularly the past five years, or the six-year-old that has her second or third youngster this spring should surely have a rest. The vitality of the older dam needs recruiting, and the checked growth of the younger one needs recovery. Of course, use a very choice stallion. Better go 20 miles at a $20 fee and $5 more for expenses, than to use a poor stallion with free service. The offspring of the one will be prized and cared for, while that of the other will not be in demand. If possible, encourage some horseman in the community to buy a rare stock horse. Give him a written promise of patronage for three years, and don't disappoint him if he does his part. A good colt this year means a good horse four years hence.



ARTIFICIAL HORSE BREEDING.

A Method Rapidly Coming into General Use.

Artificial impregnation, while yet a comparatively new subject in this country, has received considerable attention from French veterinarians who pronounce it a great success. Throughout the horse-breeding countries of the world this subject is now prominent, and in our own country it is no longer an experiment. Repiquet, the well-known equine authority, says: "The method can profitably be employed for the following purposes:

1. As a remedy against certain cases of sterility.
2. In order to impregnate several mares at one time.

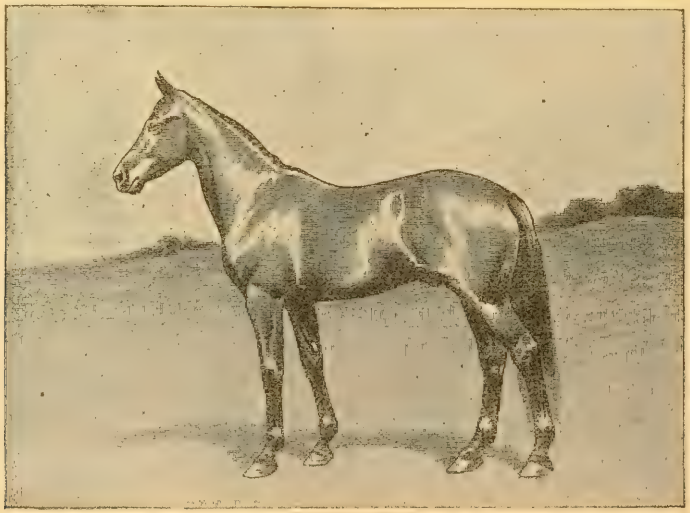
In this way the greatest possible use is made of a valuable stallion. The requisite amount of fluid is transferred from the mare covered by this stallion to the other mares. The reasons for bringing artificial impregnation into general use are:

First, service of valuable aged stallion can be utilized for twice the usual number of mares.

Second, the getting power of a stallion can be preserved unweakened for a longer period.

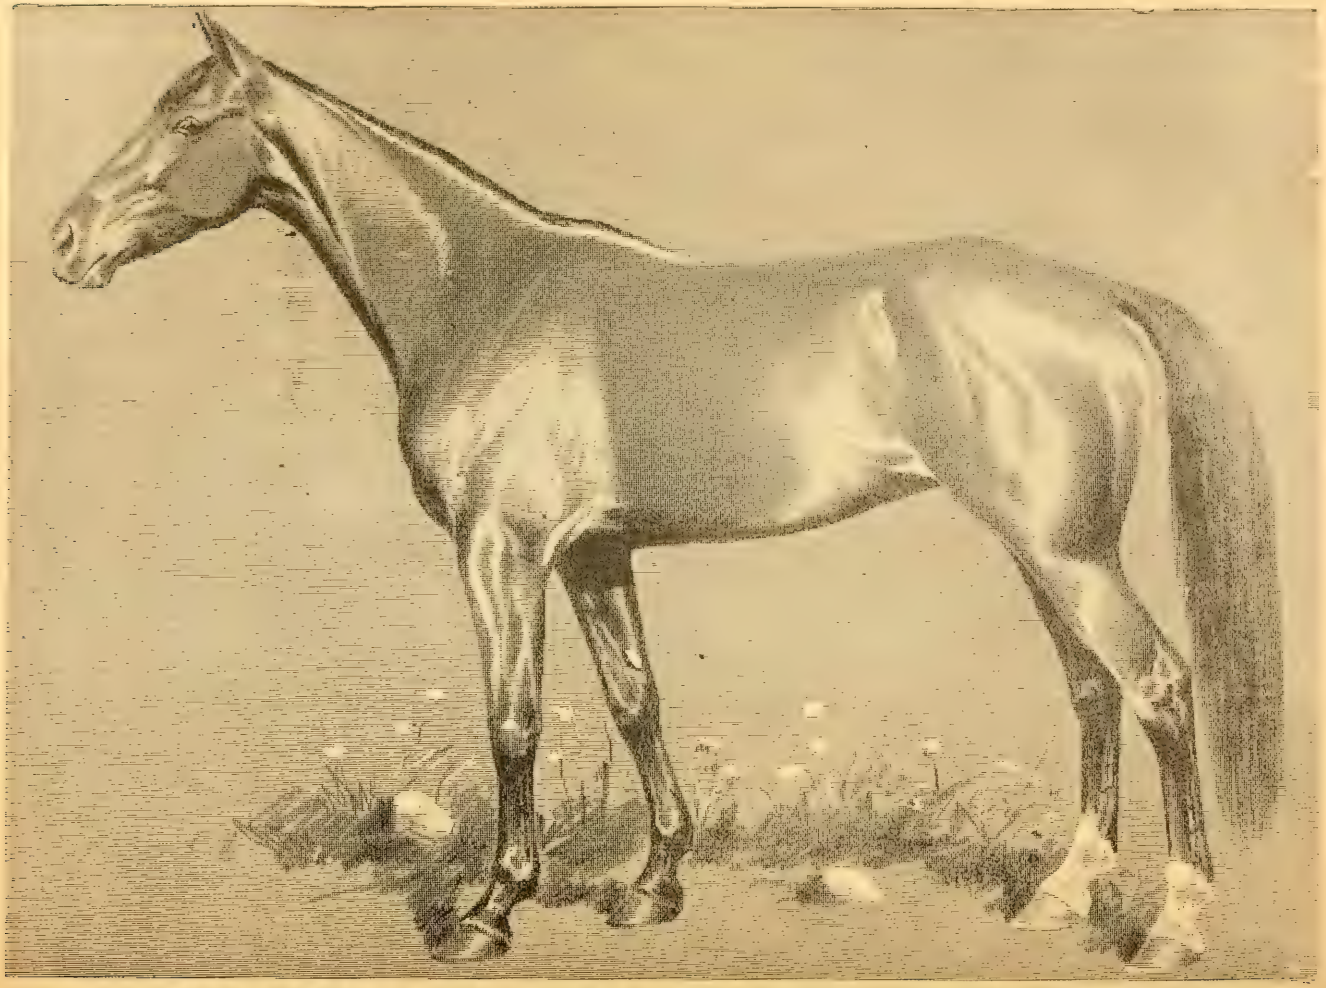
Third, since the number of foals got by a sure stallion can be doubled, or even trebled, the gains of breeders can be increased.

Fourth, mares which bear with difficulty can be brought to foal with almost infallible certainty. In practice, the fourth heading is of great importance. It is well-known to every breeder that there are a number of brood mares, which, after foaling a number of times, often remain unimpregnated. The reason for this frequently is that the margin of the mouth of the womb has been injured at the last birth, and in healing has given rise to a growth which prevents the necessary fluid from entering the womb. In artificial impregnation, however, the nozzle of the impregnator can be inserted into the mouth of the womb.



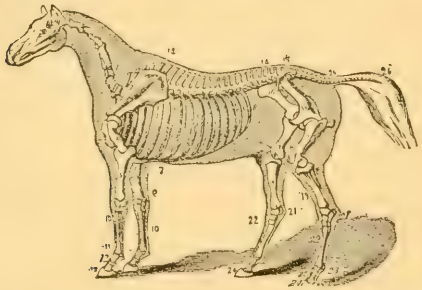
THE FATHER OF TROTTERS——

GEO. WILKES.



BAY MARE ELLA BROWN. 2:11½. PACING. BY PRINCE PULASKI.

THE DISEASES OF THE HORSE.



Skeleton of the Horse as Covered by the Muscles.

1. 1. The seven cervical vertebræ, or bones of the neck. 2. The sternum, or breastbone. 3. The scapula, or shoulder-blade. 4. The humerus, or bone of the arm. 5. 5. The radius, or bone of the forearm. 6. The ulna, or elbow. 7. The cartilages of the ribs. 8. 8. 8. The costæ, or ribs. 9. The carpus, or seven bones. 10. 10. The metacarpal, or shank-bones; the larger metacarpal, or cannon, or shank-bone, in front; and the small metacarpal, or splint-bone, behind. 11. The upper pastern. 12. The lower pastern. 13. The coffin-bone. 14 to 14. The eighteen dorsal vertebræ, or bones of the spine. 15. The six lumbar vertebræ, or bones of the loins. 16. 16. The haunch, consisting of the ilium, the ischium, and the pubis. 17. 17. The femur, or thigh-bone. 18. 18. The stifle-joint, with the patella, or knee-cap. 19. 19. The tibia, or proper leg-bone. 20. The fibula. 21. 21. The tarsus, or hock. 22. The metatarsal bones of the hind-leg. 23. 23. The pastern of the hind-feet, including the upper and larger bone.

SIGNS FOR THE DIFFERENT DISEASES OF THE HORSE.

1. As the horse has no way of communicating to us his pains or distress, we must find out the difficulty by the symptoms.

2. The pulse in a healthy horse beats from 36 to 40 times per minute, and any variation from this number will indicate excitement, disease, or suffering of some kind.

3. In fever the pulse will run from 45 to 75 per minute. If the horse becomes very weak the pulse will flutter and vary.

4. A horse generally refuses food, when sick.

5. In colds, catarrh or glanders the eyes water and just before death become glassy.

6. The natural color of the inside of the nose is a light pink. In fever or inflammation of any of the internal organs it becomes red.

FEELING OF THE PULSE. LISTENING TO THE BREATHING.

7. Cold ears indicate inflammation of the lungs, pleurisy or colic.

8. Heavy breathing indicates inflammation of lungs, rapid breathing, fever. Deep snoring breathing, brain disease.

9. Cold feet indicate inflammation of the lungs, bowels, bladder, etc.

10. Dry hair, standing straight out, indicates indigestion, glanders, worms, skin disease, the condition of being hidebound, and consumption.

11. A hot skin indicates local inflammation or the presence of fever.

12. If the manure is very offensive, it indicates indigestion. If the balls are shiny, it indicates glanders or worms.

13. A stoppage of the urine, or the passage of only a small quantity at a time, attended by great straining, indicates inflammation of the bladder or kidneys. A great quantity of water indicates diabetes.

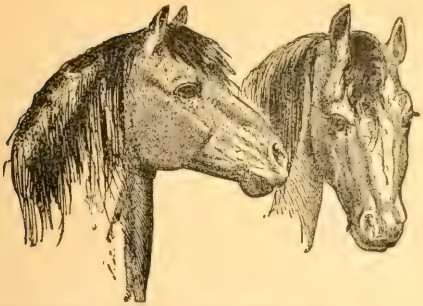
14. If the horse lies down carefully and rolls, he is suffering from flatulent colic. If he drops down quickly and rolls over rapidly several times, it is spasmodic colic. In inflammation of the bowels he lies down carefully, and remains stretched out and paws and strikes.

15. If a horse stands still like a statute, it is a symptom of the lock-jaw.

16. Stiffness in the walk may indicate rheumatism, founder, corns, or some other local difficulty in the legs or joints.

17. If a horse does not sweat, or the sweat dries up suddenly, sunstroke or some serious inflammation is the cause.

18. If a horse stands straddling, or walks in that way a lame back or some kidney or bladder disease is the cause.



PRACTICAL RULES ON KEEPING, FEEDING AND DOCTORING HORSES.

1. Young horses as well as old should be sheltered every night during the winter months.

2. Never allow horses to become poor for want of grain and hay.

3. Never grain horses highly, unless they work accordingly.

4. Always feed good hay, there is but little nourishment in poor hay.

5. Never drive or work a horse when he refuses his feed.

6. Chopped hay, moistened and salted, is the best way to feed hay.

7. Ground feed is the most profitable way to feed grain.

8. The natural pulse of the horse is from 36 to 40 per minute.

9. More diseases in horses come from short check reins than from all other causes.

10. Never feed or water horses when warm.

12. Horses should be exercised every day.

12. Never strike a horse on the head, and you will find him much more easily handled.

13. Never feed a horse damaged grain.

14. A horse should be groomed once a day.

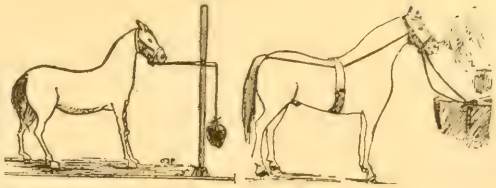
15. Old horses should be fed on chaff instead of hay.

HOW TO CURE INTERFERING.

CAUSES. It is usually the effect of bad shoeing. When colts interfere it is because they are leg weary. Some horses naturally interfere from the natural formation of the limbs.

When the interfering comes from defective shoeing, use a light shoe and have it set by a competent blacksmith. Make the shoe higher on one side than on the other if necessary, the same will cause widening of the web of the shoe and this has a good effect.

When horses interfere, the first thing to do is to get some leather protectors for immediate protection, and remedy the difficulty as soon as possible.



A SURE REMEDY FOR HALTER PULLING.

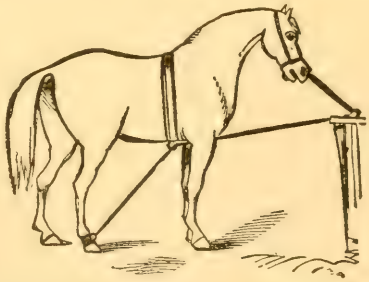
1. This is a very serious and annoying trait, and very difficult to overcome. Many runaways occur, much damage is done, and many lives are lost by horses, which can not be safely tied.

2. REMEDY. Bore a hole through a plank, and spike it upright in front of the manger, with the hole about six feet from the floor. Take a strong rope, and tie one end into the halter and run it through the hole in the plank; then tie a stone 200 pounds in weight to the other end, giving the horse about the usual length of halter.

3. In order to have the stone swing clear, nail a piece of board or scantling just beneath the hole in the plank.

4. ANOTHER METHOD. Take a ⅝ inch rope, one end of which pass through the lower side ring of the halter, then through the top side ring of the halter, then under the tail of the horse, then back to the halter and pass through the two rings of the halter on the other side (same as first), then use the two ends of the rope for a hitching strap.

A surcingle is necessary, in order to keep the rope in its place.



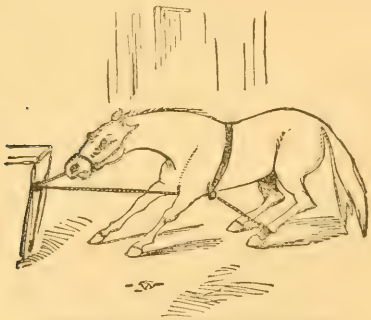
ANOTHER CURE FOR HALTER PULLING.

A NEW REMEDY.

Take an ordinary rope strong enough to answer the purpose of a halter and long enough to pass through between the fore-legs and under the surcingle, tie with a slip knot or with a leather strap to one of the hind feet.

Horses are intelligent animals and a few trials will satisfy any horse that it is a failure. He will cease to pull, in fact, you cannot make him pull on the halter, as

the halter pulls both ways and soon throws the horse. A few experiences will be sufficient to break him for all time.



SOON CURED OF HALTER PULLING.

DIFFICULT OR UGLY HORSES TO BRIDLE.

Many people are less intelligent that the horses which they handle and the habit of hitting a horse on the head or about the face will soon make an ordinary horse almost unmanageable and often in consequence become very ugly to bridle.

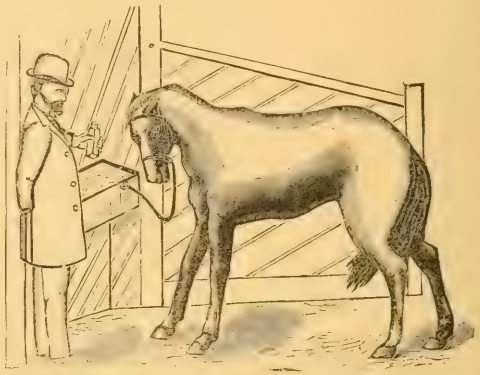
REMEDY. Treat the horse kindly, handle him gently, pat him on the face. If the horse is specially vicious, take a rope and make a slip knot and place it on the lower jaw and tie it tightly to the manger then bridle and unbridle the horse until he becomes perfectly quiet and he will submit to being handled without any effort to throw his head back. A few trials will be sufficient to break him of this annoying habit.

HOW TO GIVE A HORSE MEDICINE.

1. The old practice of drawing the head of a horse by the halter over a beam or pole to administer medicine is as cruel as it is absurd.

2. The lower jaw of the horse while taking medicine should remain perfectly free, as shown in the above illustration.

3. METHOD. Take a forked stick or a common pitchfork and run it through a small strap fastened to the upper jaw of the horse. No strangling nor struggling will take place. Neither man nor beast can drink unless the lower jaw is free to move.



THE RESULT OF A HEAVY MAN RIDING A YOUNG COLT.

A Cure for Galls, Cuts, Sores, Ulcers, etc.

Cleanse the sores thoroughly by washing them with castile or tar soap. Then apply the following ointment:

2 ounces of calomel,
4 ounces of white lead,
4 ounces of pulverized blood root,
4 ounces of pulverized alum.

Or,

4 ounces sweet oil,
2 ounces calomel,
4 ounces castile soap.

SWEENY.

Cause.—Sweeny is the result of straining the muscles on the outer side of the shoulder-blade. It occurs mainly in young horses. It is the result of too hard work or traveling on uneven ground and pulling a heavy load.

Symptoms. — Slight lameness, wasting away of the shoulder muscles, which become tender to the hand when pressed upon. The difference can be seen by comparing the two shoulders.

Treatment.—Rub the shoulder severely with a flannel twice a day, or apply the following mild blister remedy:

1 pint of ammonia,
3 pints of lard.

Apply twice a day and it will take the place of the friction caused by rubbing. Give the horse rest until fully recovered.

SHOULDER JOINT LAMENESS.

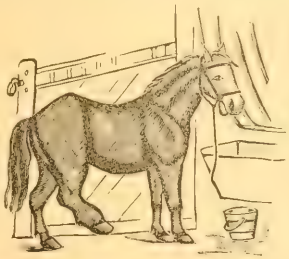
This is a very serious difficulty to remedy.

Symptoms.—The horse drags the leg with one toe on the ground and throws the leg out in attempting to move it, and it is with great difficulty that the horse can rest his foot.

Treatment.—This disease being similar to spavin in the hock-joint, should have similar treatment. If the part is very hot, reduce the temperature by a cold cloth, or a hot fomentation might work well instead of the cold; then give some treatment as for spavin. Give the horse plenty of dry bedding and make it very soft and deep.

WATER FARCY.

Cause.—It is the result of weakness in old horses, and an inflammatory condition in the young. It is generally produced by long continued labor without proper hours of rest; it sometimes causes debility, and water farcy is the result.



Symptoms.—The horse will hold the leg up as seen in annexed illustration, and will generally be lame, will not eat, but will be very thirsty.

Treatment.—Give the horse perfect rest, and feed ground feed well moistened; a quantity of wheat bran may be profitably fed; bathe the limb in cold water and rub every day, and apply bone liniment, found in other parts of the book. Give the horse some good condition powder daily for two weeks.

RING-BONE.

Cause.—It is generally caused by a natural weakness of the joint, or is the result of injuries or over-exertion.

Symptoms.—Lameness, with an inability to move the limb quickly.

Treatment.—The same as for bone spavin.

SPLINT.

Splint is a small bony enlargement on the inside of the fore-leg, just a little below the knee-joint, which generally occurs in young horses. It is the result of overwork or hard driving.

Treatment.—The same as for Bone Spavin

BONE SPAVIN.

Cause.—Spavins are caused by sprains, blows, hard work, hereditary predisposition, etc.

Symptoms.—Lameness, with a swelling of the hock-joint. Lameness generally appears before the enlargement of the joint.

Treatment.—Many modes have been adopted in treating the bone spavin. Sharp instruments have been struck with considerable force into the joint, all kinds of blistering and caustic applications have been tried. Firing is also practiced. But all of these forms of treatment are very cruel and result in little benefit. The following prescription will be found as good as any other form of treatment:

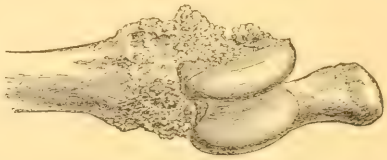
1 drachm of bin-iodide of mercury.
2 ounces of lard.

Mix well together and apply once a day for two weeks.

Another: 4 ounces of tincture of capsicum,
4 ounces of tincture of opium,
4 ounces of essence of sassafras,
4 ounces of essence of wormwood.

Mix and apply over the parts affected and rub briskly with the hand.

Dr. B. J. Kendall's Spavin Cure is also highly recommended.



How to Cure Bone Spavin.

Bone spavin is an inflammation and deposit or growth of bone on the inner part of the hock-joint. Lameness and soreness are the consequences of this abnormal growth.

Home Treatment. Give the horse plenty of rest, and apply hot water and vinegar, and give the horse plenty of bran and flax-seed. For later stages of the disease blistering may be helpful. A hot iron is perhaps more efficient.

A Liniment for Blood Spavin, Windgalls, Etc.

(HORSE LINIMENT.)

Alcohol, 8 ounces,
Tincture cantharides, 2 ounces,
Oil wormwood, 2 ounces,
Oil stone, 2 ounces,
Turpentine, 2 ounces,
Oil hemlock, 2 ounces,
Iodide potassium, 4 drachms.

Shake thoroughly before using, and apply once a day for one week, then grease the parts for one week and then apply again as before until cured.

HAL POINTER. 2:04½.

BLIND STAGGERS.

Causes.—Excessive heat or cold, bruises on the head, rheumatism, influenza, indigestion or a tight collar.

Symptoms.—Pulling back on the halter, plunging forward or running ahead, regardless of obstacles or obstructions in the way, staggering first one way and then another and often dropping down. Pulse often rapid, breathing hard or panting, twitching of the eyes and muscles.

Treatment.—Give a good dose of physic and reduce the diet. If in season turn out to grass for a time, if grass is not in season give an occasional physic, and feed laxative food.

Above all give the horse rest, and avoid a tight or badly fitting collar, when he is sufficiently well to be worked. Feed the animal on ground feed, made up with bran and other laxative food. A good feed of bran or flax-seed should be occasionally given all work horses early in the Spring.

HOW TO CURE WEAK TENDONS.

Use the following celebrated receipt:

Zinc Sulphate, 1 drachm,	Fl. Ext. Hamamelis,
Tr. Iodine, 1 drachm,	2 drachms,
Tr. Arnica 2 drachms,	Aqua, q. s., 1 quart.

Rub the tendons with this lotion and bandage, letting the bandage remain on for about two hours. Then the legs should have a good hand-rubbing, and in four or six hours the bandages may again be applied, and left for the same length of time. If the tendons are very bad, the bandage may be wet with the lotion before applying, and may remain on for three or four hours. Each time the bandages are removed have the legs well hand-rubbed. Reduce his work, giving simply exercise. If this treatment does not strengthen them, blistering should be resorted to with absolute rest for a few weeks.

WORMS.

Cause.—The cause is very uncertain, and many theories have been brought before the public.

Symptoms.—Symptoms of worms are a rough, harsh coat, irregular appetite, a rubbing of the tail, breath occasionally hot and fetid, and sometimes a short, dry cough, the animal appears poor in flesh and in spirits, and is sometimes attacked with convulsions, which may terminate in death if not speedily relieved.

A SURE SIGN OF WORMS.

Treatment.—Give a good, strong dose of physic. If that is not sufficient, give the following prescription for three successive nights:

3 drams of calomel,
1 dram of tartar emetic.

Mix, and divide into three powders.

POLL-EVIL.

Cause.—A tight halter, or the use of the martingal in driving; the horse striking the head against the wall or joists when too low, or against any other object; blows dealt on the head, etc.

Symptoms.—A hot and tender swelling appearing on top of the neck, which soon breaks and discharges large quantities of thick and offensive matter, causing stiffness of the neck and rendering the horse a most loathsome object.

Treatment.—½ ounce of common potash,
1 drachm of extract of belladonna,
½ ounce of gum arabic.

Dissolve the gum arabic in a little water; then mix and force into the ulcer with a small syringe. Cleanse the sore first with good tar soap and water. Only about one-quarter of this preparation should be used at once, and repeated in three days, if required.

BONE LINIMENT.

(MAN OR BEAST.)

Tincture of camphor, 2 ounces,
Tincture of capsicum, 2 ounces,
Tincture of myrrh, 1 ounce,
Oil spike, 1 ounce,
Spirits of turpentine, 1 ounce,
British oil, 1 ounce,
Oil origanum, 1 ounce.

Shake thoroughly before using. This is an excellent remedy for bruises, sprains, swollen joints, or lameness of any kind.

How to Cure Horses' Contracted Feet.

Shoe him with tips, as shown in the illustration above. These must be put on in a proper manner, or they will do more harm than good. The tip should be made of thin steel, and countersunk in the toe. By countersunk we mean that a space should be cut out of the horn of the toe just deep and large enough to admit a tip, so that the lower surface of the tip and the lower surface of the back part of the foot will be on an exact level.

DISTEMPER, INFLUENZA AND EPIZOOTIC.

Cause.—The influences causing these disorders are not very well known. It attacks all grades of horses. Also considerable diversity of opinion exists as to whether it is contagious or not. Some eminent authorities claim that it is, and others claim that it is not.

Symptoms.—Weakness, muscular debility, staggering walk, chills and shivering, loss of appetite, water discharged from the eyes, the pulse feeble and beating from fifty to sixty times per minute. The bowels and kidneys also suffer, the excretions being scanty.

Treatment.—Place the animals in a warm, dry stall, blanket them well and bandage their legs. If very costive, give two drachms of aloes in a warm solution of water. Then give the following prescription:

4 ounces carbonate of ammonia,
4 ounces gentian.

Make into twelve pills and give one each morning and evening. If this remedy furnishes no relief, an experienced horse doctor should be summoned.

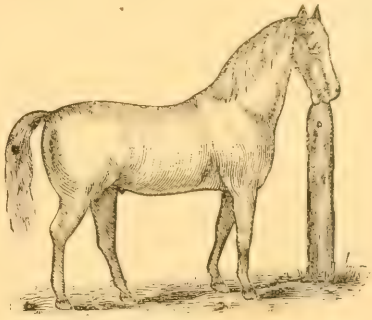
HOW TO CURE DISTEMPER.

3 ounces hops,
33 drops carbolic acid.

Put into two-thirds of a pailful of boiling water and force the animal to inhale the steam for fifteen or twenty minutes at a time three times a day. Apply a mustard poultice to the throat. Feed ground feed mixed in warm water. Give internally once a day:

1 ounce powdered gentian,
3 ounces Peruvian bark,
1 ounce powdered copperas.

Mix, and divide into nine powders.



CRIBBING.

Cause.—Acidity of the stomach, the result of sameness or unwholesomeness of food. Poor ventilation in barns and stables.

Symptoms.—The animal rests his teeth on some firm substance, and stretches his neck and body backwards, in trying to throw off the gas, which has accumulated in the stomach.

Treatment.—A cribber is easily known by the rough and ragged appearance of the outer edges of the teeth. Place a box of ashes and rock salt near by, so that the animal can eat it at pleasure. It is a good plan to sprinkle a little lime or magnesia, for a few days, over the food. Cribbing is a difficult disease to cure, but care and perseverance will overcome it. Good ventilation and change of food are absolute necessities to promote a cure.

LAMPAS.

Cause.—It is the result of young horses cutting their teeth.

Symptoms.—A swelling of the ridges behind the upper front teeth, which often prevents the animal from eating his food.

Treatment.—Take a common pocket-knife and cut the enlarged ridges back of the front upper teeth slightly, so that they will bleed freely. Be very careful not to cut them too deeply, and feed the horse soft food for a few days.

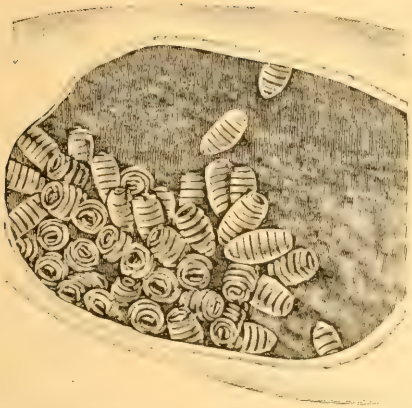
A CURE FOR CORNS.

For corns, remove the shoe and pare out carefully the horn over the corn, and make the crust very thin, but leaving the ars of the frog untouched. Then apply the following prescription:

One quarter pound tar,
One quarter pound beeswax,
Three ounces glycerine,
One and a half pound lard,
Two drachms nitric acid.

HULDA. Bay Mare.

Foaled 1888. 2:08 1/2 Trotting.



Bots as They Appear in the Stomach and Bowels of the Horse.

BOTS.—The Correct Treatment.

Many wrong ideas prevail in reference to bots. All horses that are exposed to the bot-fly, must have bots more or less in their stomachs. Dr. Adams made the following experiment: Bots, when taken from the stomach alive, will live

In strong rum, 25 hours,
In strong decoction of tobacco, 11 hours,
In strong oil of vitriol, 2 hours and 18 minutes,
In essential oil of mint, 2 hours and 5 minutes.

They will live without apparent injury in spirits of camphor 10 hours, fish oil 49 hours, tincture aloes 10 hours, in brine 10 hours.

Common-sense consequently teaches us that there is no medical remedy that will effect a cure for the bots, and there is no practicing veterinary surgeon who can tell the difference between bots and colic. Do not be misled. For colic or the bots give the following prescription:

6 ounces of whiskey,
7 ounces of new milk.

Give at one time. If not relieved repeat the dose in 30 minutes.

If the above remedy cures the horse, the disease is colic and not bots.

For bots give slippery elm tea, or potato juice. This will feed and quiet them, but they cannot be destroyed.

FOUNDER.

Cause.—Founder is produced by hard driving on a full stomach, and drinking large quantities of cold water when heated, or by eating large quantities of green feed, or over-eating grain or large quantities of ground feed.

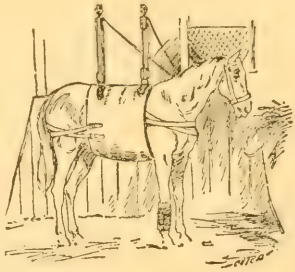
Symptoms.—Stiffness and a disinclination to move. The limbs appear stiffened and benumbed. A restlessness shown by the continual looking around, tenderness of the bowels on pressure by the hand.

Treatment.—Give one quart of linseed oil and bathe the legs with hot water. Bleeding is also recommended. A few hours after giving the linseed oil give the following prescription once a day, until cured:

Take, Spirits of turpentine, 1 ounce,
Oil of sassafras, 1 ounce,
Alum, powdered, 1 ounce,
Warm water, 1 pint.

Mix and give as a drench.

Large doses of aloes may be given, instead of the above prescription, with very beneficial results.



How to Set and Cure the Broken Leg of a Horse.

It was thought until recently that when a horse's leg was broken that the only alternative would be to shoot the unfortunate animal. If a horse's leg is broken below the knee or below the hock joint, the leg can be set and the horse's life saved.

The horse must first be swung up as in the above illustration. If the front leg is broken then allow his weight to rest on his hind feet, but if his hind leg is broken allow him to rest his weight on the front feet. The leg should be set in splints or plaster of paris, and the leg will knit together in about six weeks.

In this way valuable horses can without difficulty be saved for years of useful labor.

THUMPS.

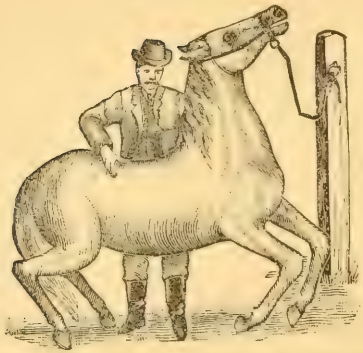
Cause.—The thumps are generally the result of overwork or hard driving in hot weather.

Symptoms.—Violent beating or throbbing in the flanks. It is properly a palpitation of the heart.

Treatment.—Give the horse plenty of salt and rest. If this is not sufficient, give the following prescription three or four times a day:

Spirits of camphor, 1 ounce,
Muriate of ammonia, 10 grains,
Sweet spirits of nitre 1 ounce,
Water, 1 pint.

Mix, and give as a drench.



INFLAMMATION OF THE KIDNEYS.

Cause.—Strain of the kidneys will cause inflammation in them. A lick over the kidneys, the foolish use of diuretic medicines, too free use of turpentine or resin will cause it. Blisters may sometimes cause it. A blister all around the leg is said to cause it, or strangury.

Symptoms.—A straddling in the hind legs, a constant straining and effort to make water, the water being passed in small quantity and sometimes bloody. Pressing over the kidneys will show that it produces pain. The pulse and breathing are increased.

Treatment.—Give a dose of linseed oil or aloes, after which give a small quantity of tobacco. Keep a flannel cloth, saturated with hot water and vinegar, over the kidneys for six hours. Then put on a mustard poultice. Give flaxseed tea freely until relieved.

HEAVES.

Cause.—The cause has never been satisfactorily ascertained. It is attributed by some to the derangement of the digestive organs, by others to rupture of the cells of the lungs.

Symptoms.—Peculiar double motion of the flanks, breathing quicker than natural, a short, peculiar cough, and a windy condition of the bowels.

Treatment.—The digestive organs should be kept in as healthy condition as possible. Feed wild prairie hay, well shaken up. The food should be moistened and the animal fed regularly. One teaspoonful of lobelia once a day, given in the food for a week at a time, will often greatly relieve the animal.

Another good remedy for the heaves is the following receipt:

1 oz. saltpeter,
½ oz. powdered ipecac,
4 pints rain water.

Mix and give a pint once or twice a day.

HOW TO STOP THE HEAVES QUICKLY.

2 ounces spanish brown, 2 ounces lobelia,
3 ounces resin, 8 ounces jamaica ginger.
2 ounces gentian,

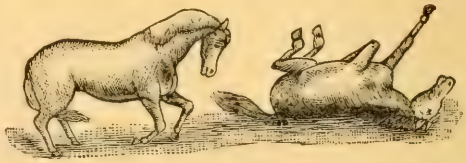
Give a tablespoonful three times a day, and while giving this medicine the horse will show no indication of the heaves; but it is only a temporary relief and will not cure.

INFLAMMATION OF THE LUNGS.

Cause.—Driving horses until they are well warmed up and allowing them to stand in a cold atmosphere without being blanketed. Over-exertion, or exposure to cold and storms.

Symptoms.—A horse stands with drooping head, legs apart, and wayward breathing. Shivering and irregular heat of the skin are common symptoms. A horse occasionally coughs, and the pulse is increased to seventy or eighty beats per minute.

Treatment.—Improper remedies will do more injury than good, and it is best, as a rule, to call a veterinary surgeon at once. Delay is very dangerous. From sixty to eighty drops of tincture aconite, given in water every two hours, at the same time giving one ounce of nitre in a pint of water, are excellent remedies to make use of, until a veterinary surgeon can be summoned.



HOW TO CURE THE COLIC IN HORSES.

Symptoms.—Sleepy look; at times very fidgety; pawing with one foot; caution in lying down; breathing labored; walking gives relief; legs and ears natural temperature.

A Home Remedy.

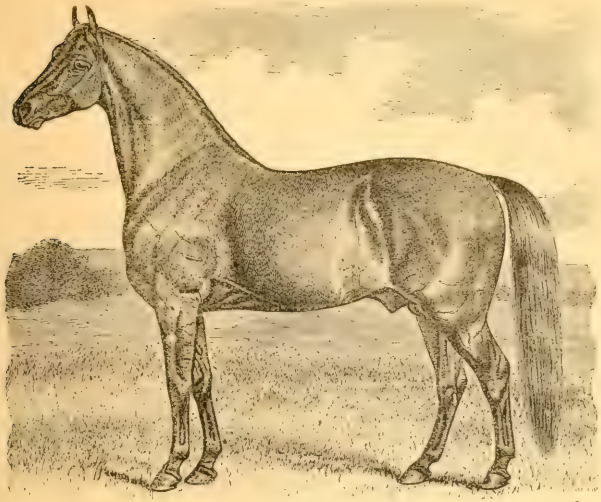
Two common tablespoonfuls (not heaping) of saleratus, mixed with 1½ pints of sweet milk. Give in one dose.

Another Remedy.

Take 1 pint of whiskey and add 3 tablespoonfuls of common gunpowder. Give in one dose. If not better in an hour, repeat the dose, and give a pint of raw linseed oil.

The following is an excellent remedy for any form of colic, and should always be kept on hand. It should be given as soon as possible. If the dose does not relieve, follow it in half an hour with another:

Chloroform, 1 ounce, Sulphuric ether, 1 ounce,
Laudanum, 1 ounce, Linseed oil, 8 ounces.



GUY WILKES. 2:15¼.

LOCK-JAW.

This is a very serious disease and cannot receive attention too promptly.

Cause.—Exposure to cold, standing in the rain, hard driving, then suddenly cooling, fatigue and hunger, injuries, cuts, bruises, driving of nails in sensative parts of the foot, in shoeing, etc.

Symptoms.—Stiffness, straggling gait, stiffness of the jaws, swollen tongue, flowing of saliva from the mouth, and a flickering motion of the eyes.

Treatment.—If possible, give by the mouth one ounce of aloes and 2 drachms of calomel. Give injections of belladonna, half an ounce dissolved in a pail of water. Give upon the tongue every hour, twenty drops of the following mixture:

1 ounce of dilute hydrocyanic acid.
1 ounce of the tincture of aconite.

Mix, and shake well together.

WIND-GALLS.

Wind-galls may be cured by tying on tightly a pad and bandage and leaving it on about two hours a day, morning and evening. They will usually disappear in the course of a week or two. Sometimes, however, it may take four or five weeks.

Another Method.

Draw the liquid out through the nozzle of a hypodermic syringe and apply a wet bandage. Wind-galls may be also removed by applying a strong solution of oak-bark and alum.

HIDEBOUND.

Cause.—Hard work, neglect, and exposure.

Symptoms.—The skin sticks very close to the ribs and appears immovable.

Treatment.—To remove the cause is the first step necessary to be taken. The following receipt will cure most cases:

2 ounces of anise seeds, in powder,
2 ounces of ginger, in powder,
1 ounce of grains of paradise,
2 ounces of mustard,
2 ounces of turmeric.

All to be powdered, and to be given in warm water, fasting, and to fast two hours after. Bleeding, tipping and physic are also good remedies.

A CURE FOR THE CURB.

Apply the following receipt morning and evening:

Pulv. cantharides, 1 ounce,
Citrine ointment, 4 ounces,
Olive oil, 1 ounce.

HOW TO CURE A FISTULA.

This disease is the same as Poll Evil, but instead of being on top of the head it is located along the raised part of the back and over the shoulders, known as withers. It is due to some violence or bruise.

Treatment.—Open it freely; when the bleeding has subsided, syringe it out with a ten per cent. solution of corrosive sublimate. Get a druggist to prepare the solution, and use it carefully, it being poisonous. After syringing it out rub well in over a large surface around the sore one ounce of cerate of cantharides. Clip off the hair and clean the skin well before applying it. After 24 hours grease it. After four days wash it and syringe it out again as before, and again after another week. If this does not cure it, repeat the whole course as soon as the scabs of the blister come off.

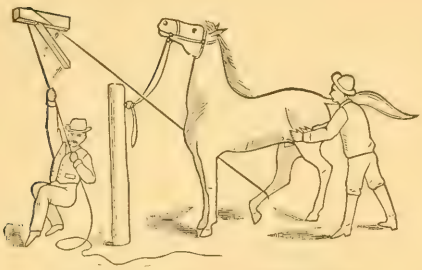
FOR SORE MOUTH.

Borax, 2 drachms, Vinegar, 1 pint,
Alum, ½ ounce, Soft water, 1 pint.

Shake well and wash the mouth every evening and morning. Feed little hay and feed a pint of flax-seed once a day until well.

FOR HARNESS AND SADDLE GALLS.

Wash the sore parts thoroughly with castile soap and warm water every evening. Then apply a solution of common salt and sugar of lead (equal parts) after each washing.



STIFLE-JOINT LAMENESS.

Cause.—This happens mostly to young horses, and it is a dislocation of the stifle, or patella, a little bone which slips off the main bone when the horse steps.

Symptoms.—The extending of one of the hind legs backward the extension of the head, and the swelling of the stifle-joint.

Treatment.—The only thing to be done is to restore the bone to its proper place and apply hot vinegar to shrink the cords. In older horses the cords have become more stiffened, and when the patella is displaced, it takes considerable force to bring it back into its proper location. The above illustration will explain itself. Keep the horse quiet and feed well for two weeks.

For lameness, bruises, galls, etc., apply the following liniment. No better preparation is manufactured.

Alcohol, 95 per cent, 8 ounces,
Spirits turpentine, 8 ounces,
Oil of sassafras, 1 ounce,
Oil of pennyroyal, 1 ounce,
Oil of origanum, 1 ounce,
Tinct. of arnica, 1 ounce,
Tinct af cantharides, 1 ounce,
Tinct. of camphor, 1 ounce,
Aqua ammonia, 1 ounce,
British oil, 1 ounce,

Mix thoroughly, and use as a liniment.

DISEASE OF THE PENIS.

Small warty growths may be clipped off with scissors.

FOR ULCERS OF THE PENIS.

Wash with tar soap and warm water once a day, and apply the following wash:

50 drops carbolic acid,
1 pint water,
1 drachm chloralhydrate.

Too Free Discharge of Urine; or Inability to Hold Water.

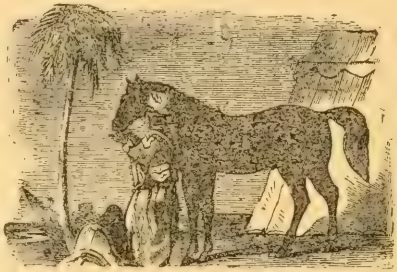
Give twice a day for two weeks the following prescription:

One-fourth ounce of cantharides, and keep the bowels open with grain or green feed.

Scratches, Cracked Heels, Mud Fever, Etc.

Wash the parts off thoroughly with warm water, and apply the following remedy:

1 ounce solution of diacetate of lead,
8 ounces glycerine.



A GOOD CURE FOR SCRATCHES.

First remove the cause, then take gun powder and lard of equal parts, melt and mix thoroughly, and apply three times a day.

Or apply glycerine and water, in equal parts, and put into the mixture a few drops of carbolic acid.

Or take glycerine and aloes, equal parts. Bandage in all cases.

An application of sugar of lead is also a good remedy.

It takes time to cure the disease; and if the horse is feeble, ground feed well moistened should be fed.

AN EASY WAY TO CURE GLANDERS.

1 ounce of rock alum,
1 ounce of white vitriol.

Powder these well and put them into a pint of warm vinegar, and syringe about one ounce up the nostrils every day.

A CURE FOR SWOLLEN LEGS.

Bandage the legs in cloths wrung from hot water and give one pint of linseed oil and one pint of sassafras tea.

Keep the leg bandaged for a few days, wringing out and applying cloths in hot water, whenever convenient.

Make a strong tea of equal parts of mullein leaves, mayapple roots, and poke roots, and add two handfuls of salt. Apply as hot as the horse can bear.

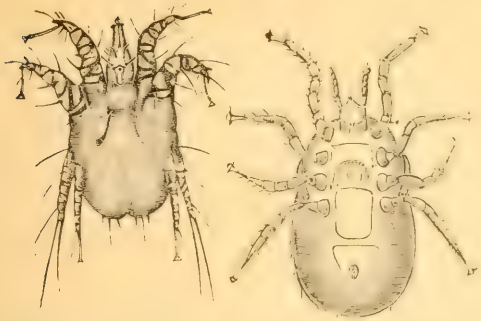
HOW TO MAKE OINTMENT FOR HORSES.

CRACKED HOOF OINTMENT.—Tar and tallow, equal parts melted together.

FOR GREASE.—Mix four ounces lard with one ounce white lead.

HEEL OINTMENT.—To the Cracked Hoof Ointment add 3 ounces of verdigris to each pound.

FOR MANGE.—Soft soap, oil of turpentine lard, and flower of sulphur, 4 ounces each, mix well.



HOW TO DESTROY MITES THAT INFEST THE HORSE.

1. These little mites as shown in the above illustration are greatly magnified so as to show their form. They are animal parasites that burrow in the skin, and under favorable conditions they can be transmitted to the mule or even to man, and may live indefinitely on the human skin. It can only be detected by a strong magnifying glass, moving among the scurf or scab of the infected skin.

The mite burrows little galleries in and beneath the scurf of the skin, where it hides and lays its eggs and where its young are hatched. The mite is wonderfully prolific, a new generation of fifteen individuals being possible every fifteen days, so that in three months the offspring of a single pair may produce a generation of 1,500,000 mites.

2. Chicken lice often infest the skin of the horse.

3. There is a parasite that attacks the heel and lower parts of the legs, especially the hind ones, and may be present for years without extending upon the body. This parasite lives on the surface, on the hairs, and among the scabs. It gives rise to great itching, stamping, rubbing of one leg with the other, and the formation of wounds, ulcerous sores and scabs. The intense itching will always suggest this parasite.

General Treatment.—Take two ounces of tobacco and two ounces of water; boil thoroughly and then apply to the skin after removing the scabs with a soft cloth or brush; repeat this every fifteen days. Or take 1 drachm carbolic acid, 2½ ounces of water. Mix and apply until a cure is effected.

How to Stop the Bleeding of a Horse or Other Animals from a Wound, Snag, Cut, or Barbed Wire Injury.

Make an application of dry manure, and it will stop the bleeding of a wound at once.

A CURE FOR THE ITCH, MANGE, Etc.

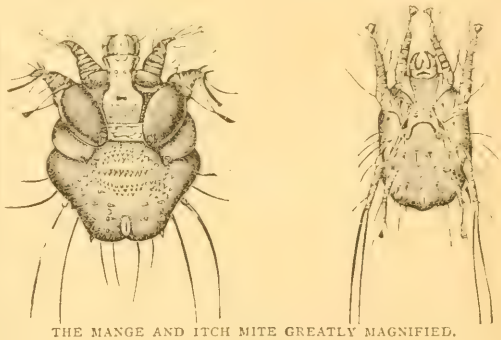
Cause.—It is a contagious disease caused by insects burrowing in the skin.

Symptoms.—Dirty and rusty color of the hair, skin covered with scales and dandruff, constant rubbing, and pimples about the head and neck and under the mane. The hair falls out and the skin is dry and hard.

Treatment.—Wash the horse thoroughly all over with castile soap. Then apply the following mixture:

4 ounces of sulphur,
4 ounces of white copperas,
4 ounces of white hellebore root, in powder.

Mix together in two quarts of buttermilk, and rub the affected parts freely.



THE MANGE AND ITCH MITE GREATLY MAGNIFIED.

LOTION FOR MANGE.

Boil two ounces tobacco in one quart water; strain; add sulphur and soft soap, each two ounces.

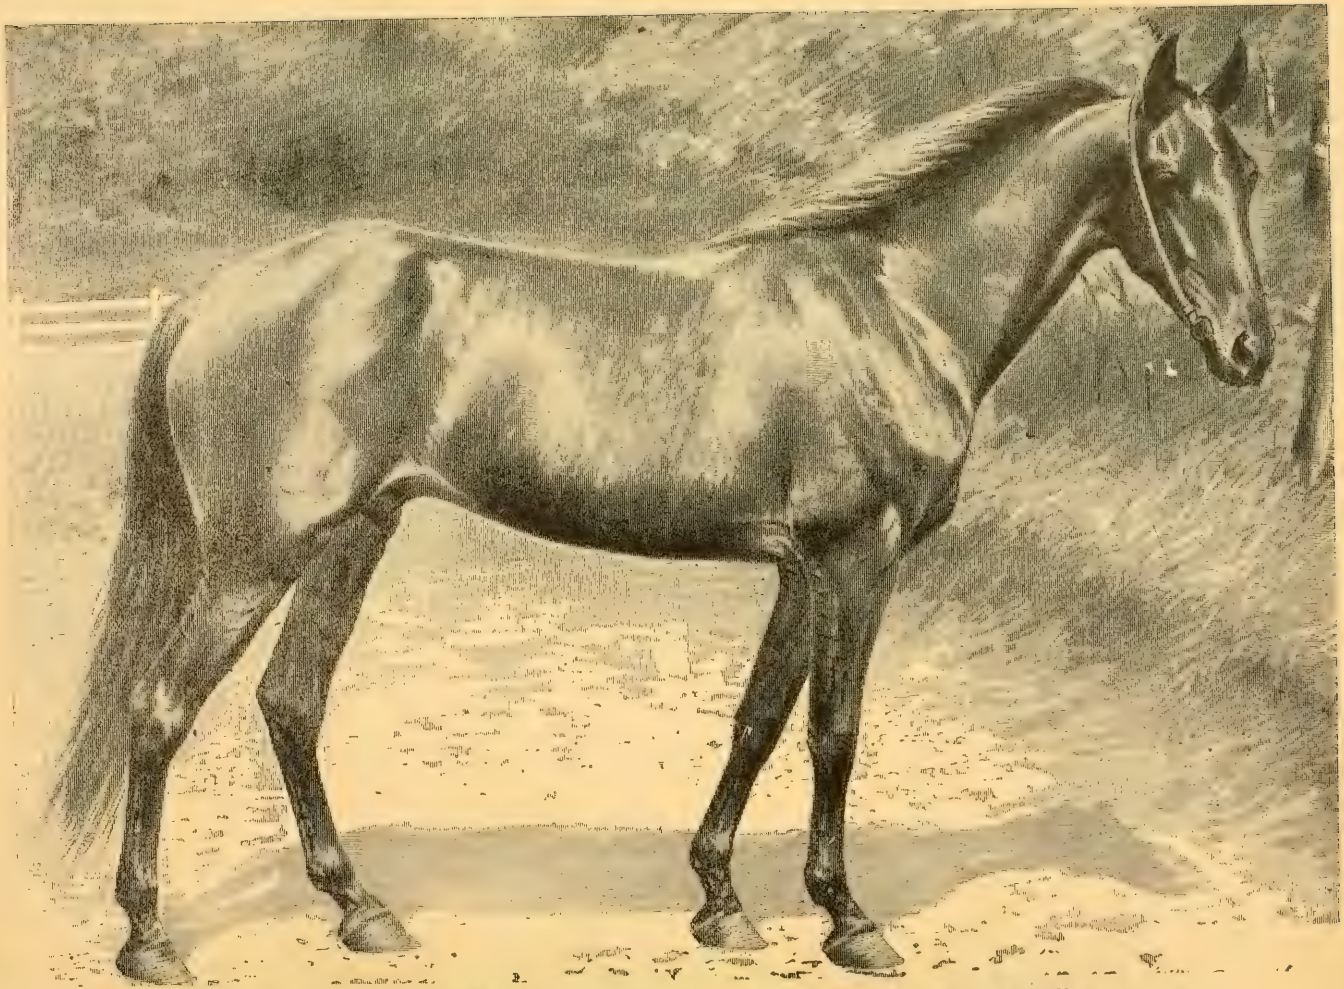
HOW TO CURE CORNS IN HORSES.

These are caused by that portion of the foot being bruised which is the sensitive part of the foot. Have the foot pared away so as to admit of the shoe being fitted to the foot so as to set easy. Do not draw too close with nails. Apply a caustic to the corn, and repeat as often as necessary, keeping the foot clean and soft by hoof ointments, and all will go well shortly. Caustic, muriatic acid, chloride of zinc — either applied, will have a tendency to effect a cure.

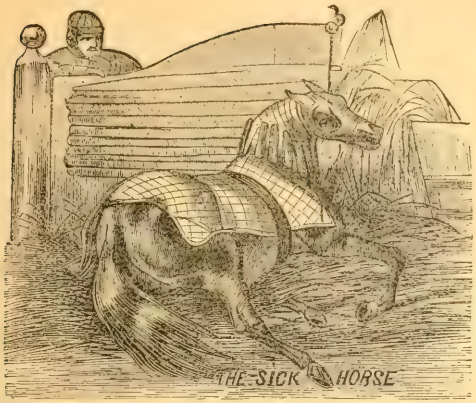
Nasal Gleet, or Discharge from the Eye and Nose.

The cause of this is neglect in distemper, or over-heat or cold; this is a white discharge from the nose, and is not contagious—and can be cured.

Cure.—Stop working him—give of alum ½ pound, resin ½ pound, blue vitriol ½ pound; grind and mix well with ½ pound of ginger; give one large spoonful every night and morning—bleed one gallon. Keep him out of the wet, and do not work him.



THE BAY GELDING BLUE SIGN. 2:08¼, PACING. BY ENSIGN.



Receipts for Horses, Cattle, Sheep, Hogs, &c.

Hoof Ointment.

Balsam Fir, Oil of Hemlock, White Pine Pitch, Honey, Venice Turpentine, Beeswax, each 1¾ ounces, Lard ½ pound, fine ground Verdigris ¾ oz. Simmer all together over a slow fire. When melted take off the fire and stir until cool. Apply between hair and hoof.

Scouring in Horses or Cattle.

Tormentil Root, powdered. Dose: For a horse or cow 1 to 1½ ounces. It may be stirred into a pint of milk and given, or it may be steeped in a quart of milk and then given three to five times daily until cured.

Gravel in Horses.

Take ¼ pound of the Queen of the Meadow and put into a quart of boiling water to steep for 15 minutes. When cool, give quarter of the above quantity night and morning until removed.

To Remove Warts on Horses or Cattle.

Saturate the warts with Spirits of Turpentine two or three times a day for a week. This remedy was never known to fail.

Choked Cattle.

No 1. Pour down the throat ½ pint warm lard, or ½ pint soft soap reduced with warm water.

No. 2. Take fine cut chewing tobacco enough to make a ball the size of a hen's egg, dampen it with molasses so as it adheres closely, elevate the animal's head, pull out the tongue and crowd the ball as far down the throat as possible. In fifteen minutes it will cause sickness or vomiting, relaxing the muscles, so that whatever may be choking it will be thrown up.

Garget in Bag.

One quart scoke root chopped fine, and one tablespoonful of sulphur mixed, given once a day in bran for a week.

Caked Bag.

Caked bag may be removed by simmering the bark of bitter-sweet in lard until it becomes very yellow; when cool, apply it to the swollen part three times a day, rubbing oil in with the hand; also give one pint of horse radish chopped fine, with potatoes or meal once a day for three days.

To Cure Staggers, or Water in Head.

Take ½ gill of melted lard, ½ gill of strong sage tea. Mix and pour down the throat. Will effect a cure in 30 minutes.

Condition Powder for a Stallion.

White Resin and Madder, each 4 oz.; Black Antimony, Gentian Root, Anise Seed, 2 oz., Spanish Flies, 1 oz., all made very fine and intimately mixed. Dose: A tablespoonful in the morning feed. This is from Robert Hudson, Winfield, Kansas. No one need fear to use it. And without the Spanish Flies, it is a good alterative and tonic for any other horse.

Distemper in Colts.

Distemper in colts has about three weeks to run its course. All the medicine required is a light dose of Epsom salts, say 4 to 6 ounces, and good nursing. Give warm bran mashes, linseed or oatmeal gruel, keep the animal warm and rub the legs with cloths, dipped in hot water; a tablespoonful of mustard in the water would be beneficial if the legs seem to be weak, numb or cold.

To Stop Heaves Quickly.

Three eggs, 2 drachms lobelia, 1 pint vinegar, 2 drachms alum; mix together; divide in three doses and give one every morning. This is not permanent, but good to trade on.

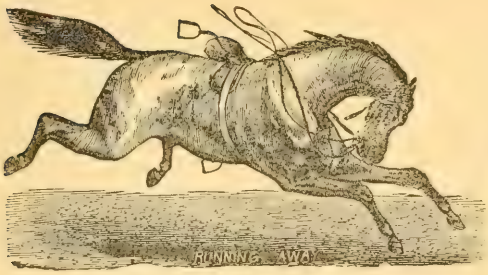
Jaundice or Yellow Water.

Symptoms.—Hair of main and tail loose, eyes yellow, bars of mouth swollen, right fore-leg lame.

Cure.—Give physic, then cleansing powders; don't bleed, and you will save your horse.

Recipe for Liniment.

Two ounces each of oil origanum, laudanum, oil sassafras, tincture camphor, oil cedar, spirits ammonia, spirits turpentine, sweet oil, one gallon alcohol. Good for swellings, burns, etc.

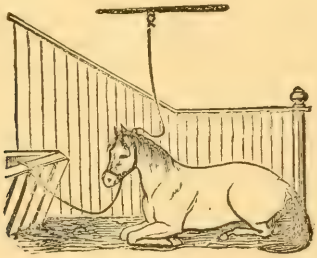


For Strains and Swellings.

Strong vinegar saturated with common salt, used warm, is good for strains and reducing swellings. One ounce of white vitriol, one ounce of green copperas, two teaspoonfuls of gunpowder, all pulverized together, and dissolved in one quart of soft water, and used cold, rubbing in thoroughly, is one of the best applications known for reducing swellings.

Recipe for Swellings.

Double handful each of mullein leaves, mayapple roots, poke roots, one gallon water; boil and add double handful salt; apply as warm as the hand can bear it. Good and cheap.



HOW TO KEEP A HORSE OR COLT FROM GETTING CAST.

1. Many horses have the trouble of getting cast, and often are crippled and ruined in a single night. The above illustration is an excellent remedy to train horses or colts to lie quietly and comfortably in their stall.

2. Take a strap and fasten it to a joist or hook overhead, so the animal cannot get its head quite down to the floor, and hitch the horse to the manger with the usual length of halter.

3. Colts which are worked very hard, or possess a nervous temperament, are more frequently liable to be cast in their stalls.

4. Colts should never be worked too hard. Give them a chance to grow and mature, if you want a good, valuable and saleable horse.

FOR FITS.

Fits are caused by overflow of blood from the heart to the brain, which causes concussion. Bleed through the nose, then give tablespoonful cleansing powders twice a day on bran mash, then the restorative liquid. Keep the bowels open.

String Halt.

It is easily known by the horse lifting up the hind leg when raised from the ground. It may be slightly manifested, or in extreme cases the fetlock may even strike the belly.

Cause. Strains, bad usage, and poor feeding.

Remedy. The longer it remains uncured, the more obstinate it will become. Give nourishing food, and rub the limb thoroughly each day. The following liniment will prove excellent:

1 ounce Oil of Origanum,
1 ounce Laudanum,
1 ounce Sassafras,
1 ounce Tincture of Camphor,
1 ounce Oil Cedar,
1 ounce Spirits of Ammonia,
1 ounce Sweet Oil.

Mix in two quarts of alcohol. This receipt is also excellent for swellings, bruises or burns.

To Fatten Horses, or Strengthen Weak and Reduced Animals,

Use the following excellent receipt:

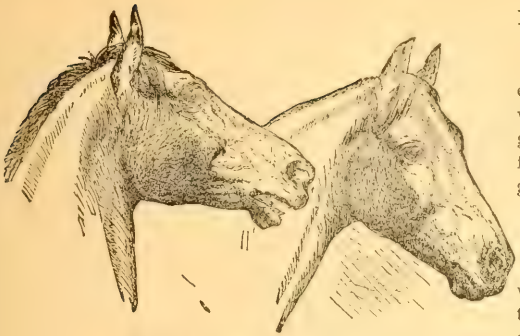
"PERSIAN CONDITION POWDER."

THE BEST IN USE.

Powd. black antimony, 4 ounces,
Powd. East India ginger, 8 ounces,
Powd. nitrate of potassium, 8 ounces,
Sulphur, 8 ounces,
Powd. rosin, 4 ounces,
Bicarbonate of soda, 8 ounces,
Glauber's salt, 12 ounces.

Mix them thoroughly.

Dose.—A tablespoonful to a pound of feed.



HEADS OF TROTTING HORSES.

Disease of the Kidneys.

Caused by feeding dirty or musty grain, hard drawing, overloading him, or by giving too much turpentine.

Cure.—Blister over the kidneys, and give the following pills every day: Take resin 1 ounce, juniper berries, ground fine, 1 ounce, flour 2 ounces; make all into a stiff paste, divide into 7 pills, give one every night, then use the cleansing powder every day; if the horse has trouble to get up when he lies down, swing him up for two weeks—give no food but that which is clean; this is half of the cure. Do not work nor ride him.

Groggy Knees.

The cause of this is sprains or over-driving, or by having corks and no toes on the shoes. This can be cured in the first stages, but if of long standing there is no cure.

Cure.—Have shoes made thick at the toe and thin at the heels; take linseed oil ½ pint, alcohol 4 ounces, camphor spirits 1 ounce, laudanum 2 ounces; shake and apply to the back part of the legs, rub it in well every four days; still increase the thickness of the shoes at the toe.

Liquid Blisterer.

Take alcohol 1 pint, turpentine ½ pint, aqua ammonia 4 ounces, oil of origanum 1 ounce; apply this as spoken of every three hours until it blisters — do not repeat oftener than once in eight days, or seven at least, or it will kill the hair.

How to Cure Corns.

Take off the shoe, cut out the corns and drop in a few drops of muriatic acid, then make the shoes so they will not bear on the part affected. Apply the "Hoof Liquid" to the hoof to remove the fever. This is a sure treatment.

DIABETES — Too Free Discharge of Urine, or Cannot Hold His Water.

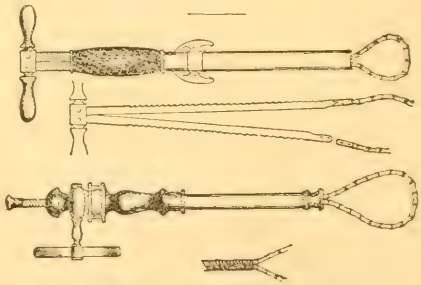
Cure.—Give ½ ounce of the tincture of cantharides every morning for ten or twelve days, and if not entirely well, repeat again, and bleed one gallon from the neck—give clean food, the cause is rotten or musty grain, or too free use of turpentine. Keep him open with mashes and green feed.

Physic Ball.

Aloes ½ ounce, gamboge 3 drachms, oil of juniper 20 drops; make into a pill with a few drops of molasses, wrap it up in thin paper and grease it, draw out the tongue with the left hand, place the gag in the mouth and run the pill back with the right hand until it drops off, let the head down and give a sup of water. First, prepare the horse by giving one or two mashes.

Water Farcy.

This is a swelling along under the chest, and forward to the breast. Bleed, rowel in the breast, and all along the swelling, six inches apart, apply the "General Liniment" to the swelling, move the rowels every day, let them stay in until the swelling goes down. Give soft food, mashes, with the "Physic" in it—this is dropsy. Many causes for it. See Yoat's work on it.



INSTRUMENTS FOR CASTRATING COLTS

This is an instrument called ecraseur and is now extensively used for castrating colts, and for the removal of tumors. The object of using this instrument is, that no bleeding follows its use.

Castration.

This is an operation for the purpose of depriving the horse-colt of his entirety by the removal of the testicles. It is a simple and safe operation. Any person having once seen it done, can do it also, if he have the resolution to do so. It has been recently demonstrated that castration can be performed on aged horses with as much safety as on those in colthood. This is attributed to the mode or manner of operation, namely by an instrument called the Ecraseur.

Sore Mouth or Tongue—Called Canker or Thrush.

Symptoms.—The mouth runs water, the horse coods or throws the hay out of his mouth. The cause of this is often from frosty bits being put into the mouth, or by eating poisonous weeds.

Cure.—Take of borax, 3 drachms, sugar of lead, 2 drachms, alum, ½ ounce, vinegar, 1 pint, sage tea, 1 pint, shake all well together, and wash the mouth out every morning—give no hay for twelve days.

Contraction of Tendons of the Neck.

Symptoms.—Often the neck is drawn around to one side, again, the horse cannot get his head to the ground. Cause of this is spraining the horse, and rheumatism produces the contraction.

Cure.—If it is taken in the first stages, bleed from the neck 2 gallons, then foment or bathe the part well with hot water, rub it dry and take the "General Liniment" and apply it every day two or three times; this will cure it. If it is of long standing, then blister all along the part affected with "Liquid Blister." Do this every 3 weeks until he is well and rub with the "White Ointment."

Sore Back.

If the saddle bruises his back and makes it swell, a greasy dish-cloth laid on hot, and a cloth laid over it, bound on fifteen minutes (with a surcingle), and repeated once or twice, will sink it flat. If it is slight, wash it with a little salt and water only. Alter the saddle, that it may not press on the tender part, for a second bruise will be worse than the first.

Eye Wash for Horses.

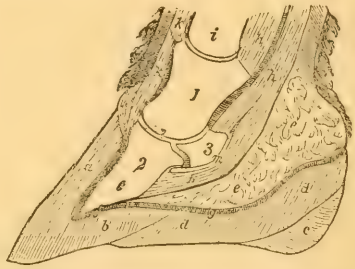
Take of sugar of lead, 2 drachms, white vitriol, 1 drachm, laudanum, 1 drachm; add to this 1 quart of soft water; let it stand six or eight hours, and it is fit for use. Wash the eyes out well every morning, after first washing the eyes well with cold water; follow this up for 3 or 4 weeks, and then, if the eyes are not much better, bleed and give a mild physic. The horse should be kept on low diet, and not over-heated or worked too hard; scalded bran and oats are good.

How to Make the Drops to Make Old Horses Young, or to Get Up and Howl.

Take the tincture of asafœtida 1 ounce, tincture of cantharides 1 ounce, oil of anise 1 ounce, oil of cloves 1 ounce, oil of cinnamon 1 ounce, antimony 2 ounces, fenugreek 1 ounce, fourth proof brandy ½ gallon; let it stand ten or twelve days, and give ten drops in a pail of water—or one gallon.

Hoof Bound or Tender Feet.

Cause of this is, fever in the feet, founder, or gravel. The symptoms are, hot feet and a drawing-in one inch from the top of the feet at the heels. Never have the feet spread at the heels, nor rasped above the nail holes, for it will do the foot an injury. Follow the directions given here. Use either the hoof ointment or the hoof liquid; apply it according to the printed directions. For hoof bound or tender feet, apply it all around the top of the hoof down one inch every third day; if for split hoof, apply it every day. First, have a stiff shoe on the foot, and cleanse the cut or crack. Never cut or burn for it.



Hoof Evil or Thrush, Grease Heels.

Cause of this disease is over-feeding, and want of exercise, or standing in a filthy stable. Symptoms, well known: A discharge of offensive matter from the frog of the foot and around the top of the foot; often the frog of the foot will come out, then you must put on a stiff shoe to keep the foot from contracting.

Cure.—Give physic, and poultice the foot with boiled turnips, add some fine ground charcoal—this must be done every night, for two or three nights, then wash the foot clean with castile soap and soft water, and apply the blue ointment every day—keep the horse on a clean floor and he will be well in twelve days.

Disease of the Liver, or Yellow Water.

Symptoms.—The eyes run and turn yellow, the base of the mouth the same, the hair and main gets loose, and he often is lame in the right shoulder, and very costive.

Cure.—Give the following ball every morning, until it operates upon the bowels: Take aloes 7 drachms, calomel 1 drachm, ginger 4 drachms, and molasses enough to make it into a ball, wrap it in paper and give it; give scalded bran and oats, grass if it can be got; when his bowels have moved, stop the physic, and give 1 ounce of camphor in ½ pint of water, every morning for twelve days, rowel in the breast, and give a few doses of cleansing powder. Turn him out.

Diseases of the Udder and Teats.

This is comparatively rare in the mare, though in some cases the udder becomes painfully engorged before foaling, and a doughy swelling, pitting on pressure, extends forward on the lower surface of the abdomen.

Treatment. — The treatment is simple so long as there is only congestion. Active rubbing with lard or oil, or better, camphorated oil, and the frequent drawing off of the milk, by the foal, or with the hand, usually brings about a rapid improvement. When active inflammation is present, fomentation with warm water may be kept up for an hour and followed by the application of the camphorated oil, to which has been added some carbonate of soda, and extract of belladonna. A dose of laxative medicine, (4 drachms Barbadoes aloes), will be of service in reducing fever, and ½ ounce saltpeter daily will serve a similar end.

Tumors of the Udder.

As the result of inflammation of the udder it may become the seat of an indurated diseased growth, which may go on growing and seriously interfere with the movement of the hind limbs. If such swellings will not give way in their early stages to treatment by iodine, the only resort is to cut them out with a knife. As the gland is often implicated and has to be removed, such mares can not in the future suckle their colts, and therefore should not be bred.

Sore Teats, Scabs, Cracks, Warts.

By the act of sucking, especially in cold weather, the teats are subject to abrasions, cracks, and scabs, and as the result of such irritation, or independently, warts sometimes grow and prove troublesome. The warts should be clipped off with sharp scissors and their roots burned with a solid pencil of lunar caustic. This is best done before foaling to secure healing before suckling begins. For sore teats use an ointment of vaseline 1 ounce, balsam of tolu 5 grains, and sulphate of zinc 5 grains.

To Restore the Appetite.

Use of pulverized caraway seeds and bruised raisins, 4 ounces each; of ginger and palm oil, 2 ounces each. Always use twice as much of the first as of the last, in whatever quantity you wish to make it. Give a small ball once a day until the appetite is restored; use mashes at the same time.

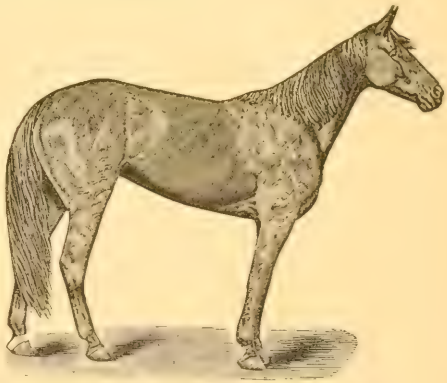
Wolf-Teeth.

These are two small teeth which make their appearance immediately in front of the upper molar teeth during the period from the colt to the horsehood. It is supposed by some horsemen that they injure the eye of the horse. No author that I have ever read describes or defines clearly that they do really injure the eye, or say what causes them to appear as they do. The only remedy is the tooth forceps.

Dropsy of Muscles on the Chest.

Symptoms.—The horse is dull, loses his appetite, swells the belly and chest before the fore-legs, roots of the mane and tail dead.

Cure.—Rowels in the breast and along the sides as far back as the swelling goes; then give some good physic. After the physic operates give the cleansing powders; one tablespoonful twice a day on bran mash till the swelling subsides. Keep the horse dry.



NANCY HANKS. RECORD 2:04.

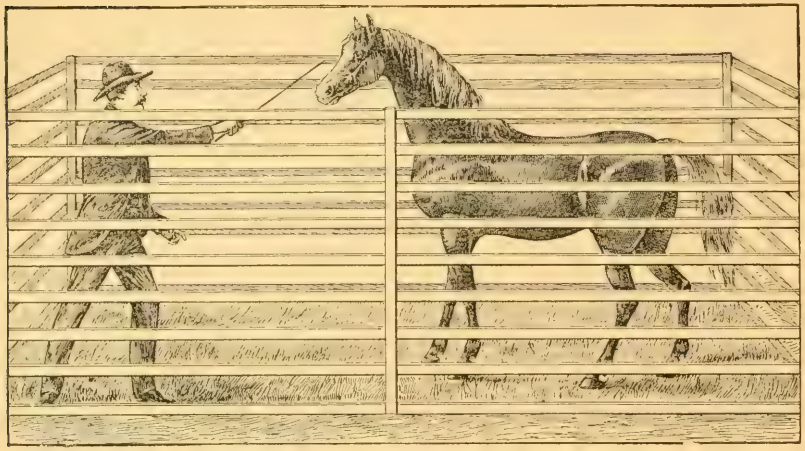
How To Enliven an Old Horse.

1 ounce oil of cloves,
2 ounces oil of sassafras,
1 ounce oil of wintergreen,
1 ounce tincture cantharides,
5 ounces of alcohol,
3 ounces tinture of asafœtida.

Mix well, and give twelve drops daily in a pail of water.

To Fatten Old Horses.

One-half gallon alcohol, one quart of brewer's yeast, one quart buckwheat flour, two drachms tincture cantharides, four ounces soda; put in a jug and let it stand six days and it is fit for use. Dose: One teacupful two or three times a day on soft feed.



BREAKING A WILD OR DESPERATE HORSE.

To Break a Wild or Ugly Horse,

Place him in a pen as shown in the annexed illustration. Then take a short whip and make him keep his head towards you. You will soon be able to pet him and completely conquer his fear. Avoid whipping. It is ruinous.

To Dry Up Old Sores.

¼ lb. dry white lead; dust on the places twice a day. Horses can be worked all the time.—This is simple and good.

Shoulder Joint Lameness.

Cause.—The most serious form of shoulder joint lameness consists in a softening of the articular cartilage of that joint.

Symptoms.—When this is the character of the lameness, it may be easily known by the manner in which the animal progresses. He usually drags his toe, and throws the leg outward at every step.

Treatment.—In this instance is very unsatisfactory, blisters, setons and firing have been tried in hundreds of cases, without any permanent advantage, for the simple reason that the cartilage is apt to be destroyed, and the underlying bone ulcerated.

Thrush.

The cause and symptoms of thrush are usually well known yet I will describe them as follows: First, fever in feet, bad stable and management, wet bedding, etc., etc.

Treatment.—Cleanse well the parts affected with castile soap and water; open the crevices and apply chloride of zinc thoroughly or crystallized carbolic acid; repeat every day until relieved; cleanse well each time before an application is made. Keep the horses feet on dry floor. Dilute with soft water one ounce of either the zinc or the acid, when it is fit for use.

A Salve for All Kinds of Sores, Cuts, Bruises, Etc.

White wax, 4 drachms, Lard, 18 drachms, Crystallized carbolic acid, 3 drachms.

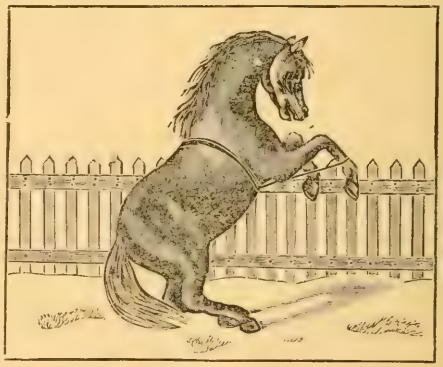
Melt the wax and lard together. Stir until cooled, and then add the carbolic acid previously liquified.

Sore Mouth.

This occurs often by jerking the animal severely with the bit, also from some unknown cause. Apply wash with swab. Tr. myrrh 4 ounces, Sol. alum-water 4 ounces.

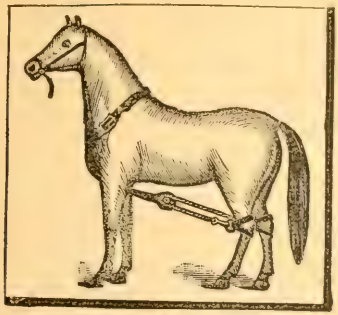
Tonics.

Where it is necessary to use tonics, gentian is one of the best vegetables, especially in chronic debility. It is best united with camomile and ginger. Gentian 4 drachms, camomile 2 drachms, ginger 1 drachm; give in balls.



How to Prevent a Horse from Jumping Fences.

Buckle a strong surcingle around the body of the horse, with a ring in the bottom of the surcingle under the horse; then buckle a soft strap around both fore-legs above the knee close up to the shoulder; then take a short rope or strap and fasten one end of it into the strap on off fore-leg and draw moderately tight; this will allow the horse to move one leg at a time, to lie down and get up, but he cannot raise both legs at once nor put them forward at the same time.



BREAKING A KICKING HORSE.

Liniment for Swellings, Bruises and Galls.

Alcohol, 95 per cent, 8 ounces,
Spirits of turpentine, 8 ounces,
Oil of sassafras, 1 ounce,
Oil of pennyroyal, 1 ounce,
Oil of origanum, 1 ounce,
British oil, 1 ounce,
Tincture of arnica, 1 ounce,
Tincture of cantharides, 1 ounce,
Tincture of camphor, 1 ounce,
Aqua Ammonia, 1 ounce.

Mix them and make a liniment.

A Liniment for Cuts, Kicks, Collar Galls, Wounds, Etc.

Sugar lead, 1½ ounces, Sul. iron, ½ ounce,
Sul. zinc, 1¼ ounces, Alcohol, ½ pint,
Saltpetre, 1 ounce, Water, 2 pints.
Sal. ammonia, ⅓ ounce.

Wash the parts three or four times a day.

Stoppage of the Bowels.

Take 2 quarts of soft and fresh horse manure, add one quart of boiling hot water, and strain through a common cloth strainer; give one pint as a drench. This will not fail for man or beast; for a man, dose, one tablespoonful every hour until it acts.

Stifle.

This is a strain of the stifle muscles only. The stifle joint never gets out; if it should, the horse would be worthless. The stifle shoe should never be used.

Cure.—Take the whites of six eggs, and two ounces of alum, pulverized; mix well together, and rub on the stifle muscles; dry with a hot iron. One application will probably be sufficient. 2. One ounce of sugar lead, one pint of alcohol; mix and apply three or four times a day, until a cure is effected.

HOW MUCH MEDICINE TO GIVE AT ONE DOSE.

NAME OF DRUG.	USE AND EFFECT.	HORSES.	CATTLE.	SHEEP.
Cream of Tartar	Increases the quantity of Urine.	2 oz,	3 oz.	1 oz.
Dandelion Extract.	Laxative. Increases the Flow of Urine.	1½ oz	2 oz.	3 drs
Ergot.	Checks Bleeding. Contracts the Womb.	¼ oz.	1 oz.	1 dr.
Ether.	Stimulant.	1 to 2 oz.	2½ oz.	½ oz.
Fennel Seed.	Improves Digestion.	1 oz.	1½ oz.	3 drs.
Galls, Oak.	Astringent.	5 drs.	1 oz.	1 scruple.
Ginger.	Stimulant, Stomachic.	1 oz.	2 oz.	½ oz.
Hemp.	Narcotic.			
Indian Extract of	Induces Sleep.	½ dr.	....	12 grains.
Iodine	Alterative. Dispels Enlargements.	15 grs.	20 grains.	8 grs.
Iron Sulphate.	Tonic. (Never to be given during pregnancy, as it may produce abortion.)	3 drs.		1 dr.
Lime Water.	Antacid, Astringent	5 oz.	6 oz.	3 drs.
Lime Chalk.	Antacid, Astringent	1 to 2 oz.	2 to 3 oz.	1 oz.
Linseed Oil.	Laxative.	1 to 2 pts.	2 pts.	½ pt.
Lobelia.	Sedative. Used for Emetics.	2 drs.	3 drs.	15 grs.

Carbolic Acid.	Sedative Astringent.	1 dr.	1 dr.	10 drops.
Chloroform.	Stimulant.	1½ drs.		1 scruple.
Cinnamon.	Improves Digestion.	5 drs.	1 oz.	2 drs.
Croton Oil.	Powerful Purgative.	10 to 15 drops	20 drops.	5 to 8 drops
Pepper, Black.	Stimulant, Stomachic.	2 dr.	3 drs.	1½ scrup.
Pomegranate, Root Bark.	Vermifuge.	1 oz.	1½ oz.	2½ drs.
Prussic Acid.	Sedative Anti-spasmodic.	25 drops.	30 drops.	7 drops.
Pumpkin Seeds.	Vermifuge, Increases the flow of Urine.	Give as needed.		
Rhubarb.	Laxative, Tonic.	1 oz.	1½ oz.	1 dr.
Resin.	Increases the Secretion of Urine.	5 drs.	1 oz.	2 to 4 drs.
Spanish Fly.	Stimulant Diuretic.	5 grs.	7 grains.	1½ grs.
Sulphur.	Laxative.	3½ ozs.	5 oz.	2 oz.
Tobacco.	Sedative Vermifuge.	4 drs.	5 drs.	1 dr.
Tar.	Expectorant, Anti-septic.	1 oz.	1½ oz.	½ oz
Turpentine.	Stimulant, diuretic. Anti-spasmodic.	1½ oz.	2 oz.	2 drs.
Wild Cherry.	Expectorant.	1 oz.	1½ oz.	3 drs.

HOW TO CLEAN LEATHER.

When leather is old and greasy, it should be thoroughly washed and cleaned before applying oil or any preparation for polish.

Wash the leather thoroughly with soft water and ammonia, or rub the leather with a weak solution of potash and water.

How to Clean Light-Colored Leather

Fawn or yellow-colored leather may be cleaned by taking one quart of skim milk mixed with one ounce of sulphuric acid, and when cold add to it four ounces of hydrochloric acid.

Shake the bottle gently until it ceases to emit white vapors. Then strain through a fine sieve and put into a bottle.

PACING MARE "KITTY B." 2:16¼. By MESSENGER CLAY.

RULES OF ADMISSION TO REGISTER.

1. Any trotting stallion that has a record of two minutes and thirty seconds (2 : 30), or better; provided any of his get has a record of 2 : 35 trotting, or better; or provided his sire or dam is already a standard trotting animal.

2. Any mare or gelding that has a trotting record of 2 : 30 or better.

3. Any horse that is the sire of two trotters with records of 2 : 30 or better.

4. Any horse that is the sire of one trotter with a record of 2 : 30 or better, provided he has either of the following additional qualifications: 1. A trotting record of 2 : 35 or better. 2. Is the sire of two other animals with trotting records of 2 : 35. 3. Has a sire or dam that is already a standard animal.

5. Any mare that has produced a trotter, with a record of 2 : 30.

6. The progeny of a standard horse when out of a standard mare.

7. The female progeny of a standard horse when out of a mare by a standard trotting horse.

8. The female progeny of a standard trotting horse when out of a mare whose dam is a standard trotting mare.

9. Any mare that has a trotting record of 2 : 35 or better, whose sire or dam is a standard trotting animal.

THE PACING STANDARD.

In order to define what constitutes a standard-bred pacing horse, and to establish a breed of pacers on a more intelligent basis, the following rules are adopted to control admission to registration. When an animal meets the requirements of admission and is duly registered, it shall be accepted as a standard-bred pacing animal.

1. Any pacing stallion that has a record of two minutes and twenty-five seconds (2 : 25), or better, provided any of his get has a record of 2 : 30 pacing, or better; or provided his sire or dam is already a standard pacing animal.

2. Any mare or gelding that has a pacing record of 2 : 25 or better.

3. Any horse that is the sire of two pacers with records of 2 : 25.

4. Any horse that is the sire of one pacer with a record of 2 : 25 or better, provided he has either of the following additional qualifications: 1. A pacing record of 2 : 30 or better. 2. Is the sire of two other animals with pacing records of 2 : 30. 3. Has a sire or dam that is already a standard pacing animal.

5. Any mare that has produced a pacer with a record of 2 : 25 or better.

6. The progeny of a standard pacing horse when out of a standard pacing mare.

7. The female progeny of a standard pacing horse when out of a mare by a standard pacing horse.

8. The female progeny of a standard pacing horse when out of a horse whose dam is a standard pacing mare.

9. Any mare that has a pacing record of 2 : 30 or better, whose sire or dam is a standard pacing animal.

10. The progeny of a standard trotting horse, out of a standard pacing mare, or of a standard pacing horse, out of a standard trotting mare.

THE FIRST PLOW.

ABORTION OR PREMATURE BIRTH.

1. **Care.**—Great care should be exercised by way of feeding and handling a mare from the very earliest months of pregnancy until she foals. Avoid feeding any grain that has become smutty, for it contains more or less ergot, which increases the chances of premature birth.

2. **Hempseed.**—If a mare has lost her foal regularly for two or three years, about four months before foaling give her one-half pint hempseed twice a day for one month. If a mare shows indications of straining before her time, give her a handful of whole wheat three times a day for a few days, but be careful that it is free from smut.

3. **Caution.**—If a mare has lost her colt before the proper time of birth, be careful and keep all other mares that are with foal from smelling or coming in contact with that place, because it is liable to produce abortion upon them.

4. **Trotting.**—No mare after she is with foal should be put upon the track.

5. **Work.**—Work is better than idleness, however, for all mares that are pregnant.

HOW TO DOCTOR CATTLE.

BLACK LEG.

Cause. — This disease is considered epidemic. Fat cattle are generally the victims. It is a disease that is not very general.

Symptoms.—Difficult breathing, moaning or groaning, restlessness, generally lameness in one leg, moving with great difficulty, fever and dryness of the nose, and swelling of the fore and hind quarters.

Treatment.—Saturate a blanket with cold water and keep the animal well covered, but changing it occasionally to keep the blanket cool. This reduces the fever. Then give the following prescription:

Take—Tartar emetic, 40 grains,
Tincture of digitalis, 1 ounce,
Mix in cold water, 1 pint.

Repeat the above dose every two hours, omitting the digitalis after the first two doses.

BLACK TONGUE.

Take—Powdered burnt alum, 4 ounces,
Chloride of lime, 2 ounces,
Corn meal, 2 quarts.

Mix all together, and with this powder swab the mouth several times a day. No part within the mouth should escape the application.

INFLAMMATION OF THE BRAIN.

Take—Tartar emetic, 60 grains,
Spirits of nitre, 2 ounces,
Tincture veratrum veride, 1 ounce.

Mix and give every four hours until the inflammation is subdued; after that, give smaller doses and not so often.

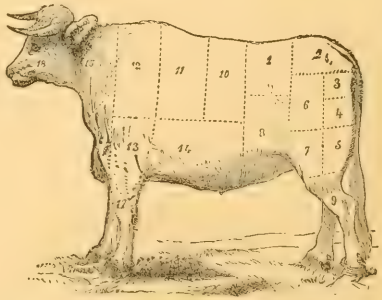
INFLAMMATION OF THE BLADDER.

Give internally one of the following powders every hour until relieved:

Nitrate of potassa, 1 ounce,
Tartrate of antimony, 1 drachm,
Pulverized digitalis leaves, 1 drachm.

Mix, and divide into six powders.

Boiled flaxseed draughts should be freely given.



OX, SHOWING THE MODE OF CUTTING UP THE VARIOUS JOINTS.

INFLAMMATIOM OF THE BOWELS.

Cause.—Overloading the stomach with musty food, sudden chills after hard work, kicks and blows on the belly, or protracted colic.

Symptoms.—The symptoms are similar to colic, only milder in form. Shivering, labored breathing, lies down very cautiously, will sometimes roll or plunge spasmodically. Pressure on the abdomen gives great pain, while in colic it relieves the pain.

Treatment.—Give eight ounces of linseed oil if the bowels are constipated. Then give the following prescription every three hours:

1 ounce of tincture of belladonna,
1 ounce of essence of sassafras.

Give one-half teaspoonful in half a pint of water. Take good care and give the animal all the cold water it will drink. The disease usually lasts from 5 to 14 days. Severe cases usually prove fatal.

INFLAMMATION OF THE KIDNEYS.

Treatment.—Give one pint of linseed oil and ten drops of castor oil mixed together; follow this with small doses of salts once a day, for three or four days; give injections of water, one-half a gallon to two ounces of tincture of arnica. Mustard applications to the loins are also very useful.

FOR HOLLOW HORN.

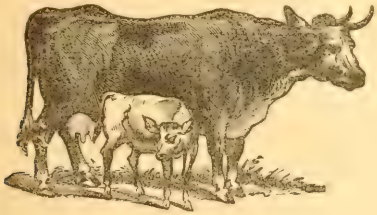
Take—Pulverized nitre, 2 ounces,
Ground ginger, 4 ounces,
Black antimony, 2 ounces,
Flowers of sulphur, 2 ounces.

Pour two or three tablespoonfuls of turpentine in the hollow back of the horns, and rub the horns well with it.

COW-POX.

Two varieties of sore teats occur in the cow, in the form of pustular eruptions. They first appear as small vesicles, containing a purulent matter, and subsequently assume a scabby appearance, or small ulcers remain, which often prove troublesome to heal.

Treatment.—Foment the teats well with warm water and castile soap, after which, wipe the bag dry, and dress with citrine ointment. The preparations of iodine have also been recommended, and they are very serviceable.



FOR SORE TEATS, ULCERS, WOUNDS, BRUISES, Etc.

Apply the following "Reliable Healing Ointment:"

Resin, 5 ounces,
Lard, 8 ounces,
Yellow wax, 2 ounces.

Melt them all together, strain through linen, and stir them constantly until cool.

CATTLE COLIC OR HOOVE.

Cause.—Eating large quantities of wet grass, clover, turnips, etc., which causes an accumulation of gas.

Symptoms.—Serious distress and bloating, frequently threatening suffocation.

Treatment.—Give the following prescription:

1 ounce of spirits of hartshorn,
1 quart of water.

Mix, and give at once.

If the above prescription is not readily obtained, give two ounces of table salt dissolved in one quart of water.

If the above treatment is of no relief, extreme treatment must be resorted to. Take a small knife and pierce the abdomen slightly, and place into the cut a common clay pipe-stem or a small tube made of a piece of elder. This will usually give instant relief.

DEHORNING REMEDY.

A calf can be prevented from having horns by an application of crude potash to the spot where the incipient horn can be felt, so Waldo F. Brown says. The plan of dehorning is gaining in favor, and done in this way has much to commend it.

PLEURO-PNEUMONIA.

Cause.—This disease is an inflammation of the lungs and the membranes covering the lungs and chest, commonly called the Pleura. It is a contagious, infectious, and epizootic disease.

Symptoms.—Reduced and irregular appetite, dry cough, the back and the sides along the chest become tender, labored breathing, the nose hot and dry, rumination entirely or partially suspended.

Treatment.—The first thing to do is to separate the diseased cattle from the herd, and give the affected ones the following prescription every day:

2 drachms of sulphate of iron,
1 drachm of carbolic acid.

There are other systems of treatment, such as inoculation, burning of sulphur in the stable, but the only sure remedy is to separate the cattle and keep them separated, and if the affected ones die, it will not injure the others.

DYSENTERY OR FLUX.

Take—Castor oil, 1½ pints,
Spirits of turpentine, 1 ounce.

Mix, and give as a drench. After it acts,

Take—Powdered opium, 40 grains,
Calomel, 40 grains.

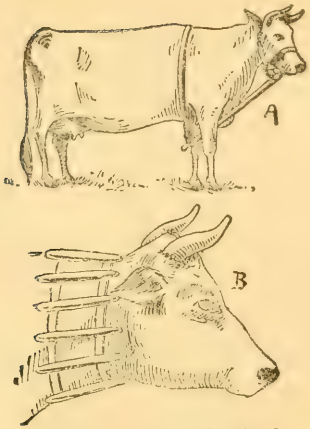
Mix, and give in half a pint of gruel.

MURRAIN.

Cause.—The cause is unknown. It is a constitutional disease, and the worst that farmers have to deal with. It is also considered contagious.

Symptoms.—High fever, painful cough, with small, hard, and rapid pulse, sometimes sore teats, mouth, and feet, diarrhœa, weeping and swollen eyes.

Treatment.—Give ¼ pound of Epsom salts, with 1 drachm of Jamaica ginger, twice a day, for two or three days. Very little medicine is required internally in this disease, but much depends upon good nursing.



SELF-SUCKING COW.

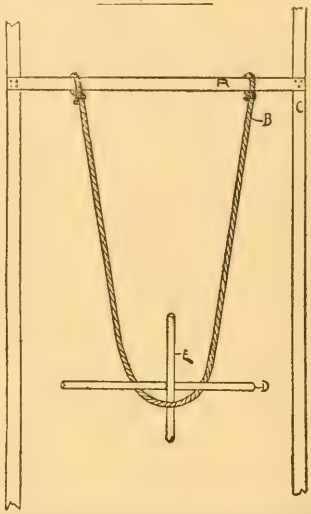
Simple Ways of Preventing the Habit.

From the numerous devices given for keeping cows from sucking themselves we have selected the two shown in the illustration as among the most successful and easily made and tried. The one in the upper part, A, is made as follows: A strap is fastened around the body of the cow and a halter put on her head. A stick is attached to the halter, and reaching between the front legs is fastened to the strap around the body. This prevents getting her head around.

The device shown in the lower part, B, is simply a necklace made from old fork or broom handles strung on a strap and buckled around the neck. Fit it to the cow and make the sticks long enough to keep her from putting her head on the side, but be sure they are not long enough to chafe the shoulders or throat when the head is not turned.

FOR LAMENESS, Etc.

Apply the liniment as prescribed under "Stifle-Joint Lameness" in Horse department.



A SIMPLE CONTRIVANCE FOR LIFTING A BEEF.

Use the space in a double corn crib or driveway in a barn. To a crosspiece, represented at A in the illustration, placed over this driveway, adjust a ¾ inch rope, B, as for a swing. After placing the beef on the gamble, D, put the rope swing under it between the legs, lay a stout stick on the middle of the gamble and under the rope, then turn the stick: the rope winds around the gamble. Two men can easily lift a beef in this way without trouble.

N. B.—The stick E is short and can be turned easily between the legs of the beef. Try it.

HOW TO DOCTOR SHEEP.

The walls of the stomach of the sheep are but slightly acted upon except by doses of very improper magnitude. Medicines to reach the fourth stomach, should be given in a fluid state if possible, and even then it may be given in such a manner as to defeat the object. In giving sheep liquid medicine it should be given very slowly. The pulse of the sheep is about 65 per minute.

BRONCHITIS.

Give salt in doses of 2 ounces, and lime water in doses of 8 ounces.

LUNG FEVER.

Give the following dose every 2 hours:

Take—½ drachm tincture of digitalis,
½ ounce spirits of nitre,
2 grains tartar emetic.

DYSENTERY.

Take—½ ounce powdered golden seal,
1 ounce powdered charcoal,
1 ounce prepared chalk,
½ drachm powdered catechu,
½ drachm ginger.

Mix, and give one rounding teaspoonful twice a day. If not well in two days, double the dose.

ROT.

If the foot gives an offensive smell, wash with a solution of chloride of lime 2 ounces, rain water 3 pints.

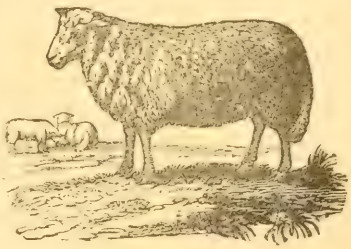
SORE MOUTH.

Daub the lips and mouth plentifully with tar.

CATARRH.

Give flaxseed or some other laxative.

MAGGOTS.



The horns of rams may grow very closely to their heads and maggots may accumulate underneath. — Apply powdered tar and they will soon disappear.

FOR SCAB OR MANGE.

Dip into a strong tea of tobacco, or apply the following wash:

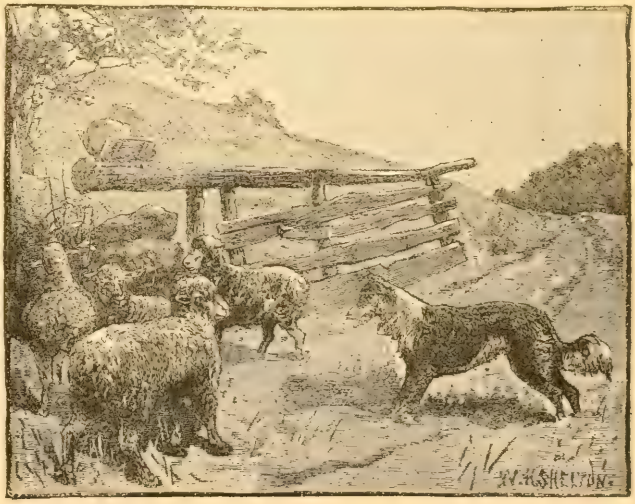
1 quart tobacco tea,
½ pint spirits turpentine,
1 drachm corrosive sublimate.

SHEEP TICK AND LICE.

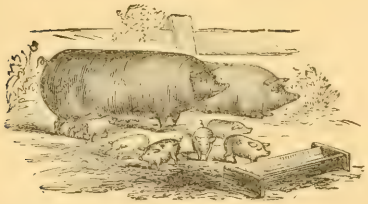
After the sheep have been sheared 2 weeks boil a refuse quantity of tobacco leaves, or 5 or 6 pounds of plug tobacco. Put the liquid into a trough and dip the sheep, being careful to keep their heads out. This quantity will wash about 100 sheep.

COLIC.

½ ounce Epsom salts,
1 drachm Jamaica ginger,
60 drops essence of peppermint.



HOW TO DOCTOR HOGS.



In the treatment of the hog we cannot enter into details. In sickness he is not a very good patient, and about all that can be done, is to administer a little medicine in his food.

HOW TO CATCH A HOG.

Swine are very difficult animals to handle or master. The following method of getting hold of them has been highly recommended:

RULE.—Fasten a double cord to the end of a stick, and beneath the stick let there be a running noose in the cord; tie a piece of bread to the cord, and present it to the animal; and when he opens his mouth to seize the bread, catch the upper jaw in the noose, and draw it tight, and the pig is fast.

Another method is, to catch one foot in a running noose. This can be applied in various ways; either by suspending it or dropping it on the ground and allowing the hog to step within it, and then jerking it up and catching the leg. Another method is, to take a pole and fasten a long, narrow hook, with a large opening, on the end of it. This can be readily hooked around the hind leg, and it will hold the strongest animal.

THE DREADFUL DISEASE, TRICHINA SPIRALIS.

A Piece of Diseased Meat Greatly Magnified.

Trichina are microscopic worms which infest the muscles, intestines, etc. The mature worms live in the intestines of the animal, and the immature, or minute worms, live in the muscles. This is one of the most serious diseases that attacks the American hog.

Symptoms.—After eating the flesh of animals affected with trichina it takes from 8 to 15 days to manifest the symptoms. They are severe muscular pains, stiffness of the limbs, and sometimes considerable swelling on the skin; in man the disease is often taken for rheumatism or typhoid fever, and produces loss of appetite, indisposition to move, pain and stiffness.

Treatment.—Give a strong dose of physic. Then give the following prescription to diseased animals:

2 drachms of asafœtida,
4 drachms of azedarach.

Mix, and give the same once a day in 8 doses.

Glycerine given internally, is also an excellent remedy for trichina.

CAUTION.—Never eat pork, unless it is well and thoroughly cooked.

HOG CHOLERA, AND HOW TO TREAT IT.

In the treatment of hog cholera very little can be done. The diseased animals are always a poison to the healthy ones, and complete separation should be effected at once. There are a thousand different remedies advertised, but none of them are effectual. The government has been investigating the subject many years and as yet has found no specific. The following may be done and will add as much as anything to the safety of a herd of swine:

1. Removal of still healthy animals to inclosed uninfected ground or pens as far as possible from infected localities.
2. Destruction of all diseased animals.
3. Careful burial or burning of the carcasses.
4. Repeated thorough disinfection of the infected premises.
5. Great cleanliness, both as to surroundings and as regards the food, to prevent it becoming infected.
6. Place from one-half to one pound of lime into a gallon of water and give once a day. This is an excellent disinfectant.

7. In view of the fact that very few of the diseased animals ever recover, and there is little in those which do recover, there is but little use to resort to medical treatment, in the endeavor to cure diseased animals.

8. The better way is to kill the diseased animals and burn them, and thus destroy them at once.

THE BEST REMEDY KNOWN FOR HOG CHOLERA.

If the disease prevails in the community, it is very difficult to avoid its attack.

Symptoms.—Loss of energy and appetite, lying down by himself, moving slowly, evacuations of a dark color, bad odor, feet and legs cold; after death the abdomen becomes of a dark purple color.

Treatment.—An excellent preventive is the following: Burn corncobs into charcoal and feed it freely. Mix well together:

6 pounds of powdered sulphur,
1 pound of animal charcoal,
6 ounces of sulphate of iron,
1 pound of pulverized cinchona.

Mix about a tablespoonful for each animal in a few potato peelings or cornmeal three times a day. This treatment will generally preserve a herd of swine from taking the cholera, even if the disease is in the immediate vicinity.

The following remedy for hog cholera has been extensively used:

2 pounds sulphur, ½ pound saltpetre,
2 pounds madder, 2 ounces arsenic,
½ pound black antimony, 2 pounds copperas.

Pulverize and mix. For hogs that are sick, mix from 2 to 4 tablespoonfuls in each pail of swill. As a preventive, 1 teaspoonful in a pail of swill will keep the disease at bay.

Do not allow hogs, sick or well, to run where there is stagnant water.

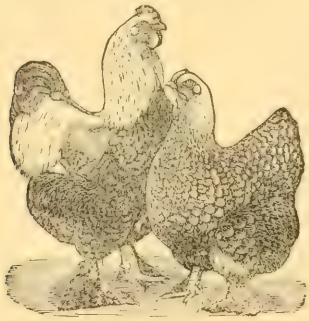
After the Animals have been Attacked,

give the following prescription:

Take—Ground ginger, 4 ounces,
Black antimony, 2 ounces,
Flour of sulphur, 2 ounces,
Pulverized nitre, 2 ounces,
Sulphate of iron, 4 ounces.

Mix, and give to a large hog one full teaspoonful three times a day; to a hog under 150 pounds a level teaspoonful, and to smaller ones according to size.

PRACTICAL RULES FOR KEEPING POULTRY.



DARK BRAHMAS.

1. A little glycerine applied occasionally to the combs and wattles, will prevent injury by frosting.

2. A great source of contagion is the drinking troughs. Remember this if roup should make its appearance in your poultry house.

3. In place of "Tonics" drop a nail into the drinking trough and allow it to remain there. It will supply all the "tincture of iron" required.

4. If you feed whole corn, place it in the oven and parch it occasionally and feed smoking hot. The fowls appreciate it in the cold, frosty weather.

5. A little linseed or oil meal given once a week in the soft feed will promote laying. This will not come under the heading of "Dosing the fowls with medicine."

6. Do not throw your table scraps into the swill barrel. Give them to the chickens.

7. One of the most important points in the keeping of ducks is to give them clean, dry quarters at night. They are very prone to leg weakness and cold, damp quarters.

8. Feed your fowls just what they will eat up clean. Fat hens or pullets are poor layers, and the latter is just what you don't want in seasons when eggs are 28 cents or more per dozen.

9. Fowls over three years old are not, as a rule, good breeders. The males are unable to properly fertilize eggs for hatching, while the stock is usually weak. Four years is generally considered a "ripe old age" for a fowl.

10. Each hen, if properly kept, will lay from 200 to 250 eggs a year.

11. Liver and intestines are an excellent food to make hens lay.

12. Keep an abundant supply of lime where the hens can easily get at it if you desire your hens to lay well.

13. Always clean the nest well and put in fresh straw before the hen begins to sit.

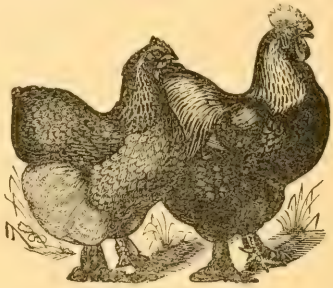
14. It is best in breeding to cross or mix the breeds more or less every year. It improves the flesh and general health of the fowls.

15. Pullets are better layers than old hens. Keep your stock young by disposing annually of the old broods.

16. Keep at least one rooster for every eight hens if you desire vigorous young chickens.

17. It is a good plan to change roosters every year.

18. Roosters are best at two years of age.



PARTRIDGE COCHINS.

DISEASES AND THEIR TREATMENTS.

In North America the climate is very good for all kinds of poultry. There are very few diseases but what readily yield to judicious treatment.

Most of the diseases to which fowls are subject, are the result of neglect, exposure, or bad diet.

HOW TO CURE THE CHICKEN CHOLERA.

Symptoms.—The symptoms of chicken cholera are greenish droppings, prostration, and intense thirst. It should not be mistaken for indigestion. Cholera kills quickly, and this is a sure indication.

Remedy.—The best remedy is to add a teaspoonful of carbolic acid to a quart of water and give no other water to drink. The remedy is not a sure cure, but is one of the best. When cholera puts in an appearance, everything on the place should be thoroughly cleaned and disinfected, the remedy mentioned above being also an excellent disinfectant.

Another Good Receipt.

½ pound madder,
½ pound sulphur,
2 ounces antimony,
2 ounces saltpetre.
¼ pound cayenne pepper.

Mix a tablespoonful in feed for 30 chickens.

BROWN LEGHORNS.

ASTHMA.

Symptoms.—The fowls labor for breath, opening the beak often and for quite a time, and sometimes drops of blood appearing on the beak.

Treatment. — Take the disease in hand as soon as discovered, keep the fowl warm, and give equal parts of sulphur and fresh butter (or fresh lard) thoroughly mixed.

FEVER.

Symptoms.—Restlessness, refusing to eat, drooping wings and excessive heat.

Treatment.—Mix a little castor oil with burnt butter and give a teaspoonful three times a day.

LOSS OF FEATHERS.

This disease, common to confined fowls, should not be confused with the natural process of moulting. In the diseased state no new feathers come to replace the old.

Treatment.—Keep warm, and feed hemp seed and corn. Add brown sugar to the water.

GAPES.

The Gapes is a very common ailment of poultry and domestic birds. More common among the young than the old.

Cause.—The disease is caused by the presence of little red worms in the wind-pipe, about the size of a small cambric needle.

Symptoms.—Gaping for breath with beak wide open, yellow beak, tongue dry and feathers ruffled on the head and neck.

Treatment.—Give a pill each morning made of equal parts of scraped garlic and horse radish, with as much cayenne pepper as will outweigh a grain of wheat, mix with fresh butter.

If a good many are affected, put from 5 to 10 drops of turpentine to a pint of meal.

Treatment must be given in the early stages of the disease, or all remedies will fail.

HOW TO DESRTOY AND KEEP RID OF HEN'S LICE.

All fowls are more or less infested with lice. Fowls are sometimes so covered that the natural color of the feathers cannot be distinguished. These loathsome vermin will not only cover the fowls, but will multiply and spread over the entire hen-house, barn, woodshed, or any other place, frequented by the poultry.

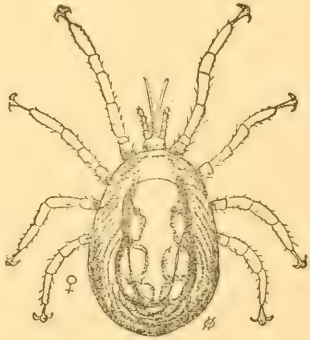
Poultry cannot be fattened when covered with lice.

Remedy. — 1. Whitewash the hen-house frequently, whitewash all the roosting poles, etc., or run them slowly through a fire of old straw or hay.

2. Close the hen-house up tightly and burn sulphur in it. The sulphur fumes will penetrate every crevice and destroy the vermin.

3. Flower of sulphur may be mixed with Indian meal and water and be fed, in proportion of 1 pound of sulphur to 1 peck of corn meal.

4. Applying grease of any kind by rubbing it among the feathers is certain death to the vermin.



Chicken Mites and Their Extermination.

The above illustration shows the chicken mite greatly enlarged. These are little insects or parasites; the older ones of which are of a darkish gray and the younger ones are a clear whitish color, and are about the size of a pin's head.

These parasites secrete themselves between the cracks and corners of the perches during the day-time, but sally forth to draw the blood of their victims during the night They accumulate by the thousands and are very destructive to good poultry.

Close the hen-house or whatever place they are found in and take a few pieces of brimstone and heat a piece of iron, like a nut or small bolt, red hot and place it into the basin containing the brimstone, and let it consume the brimstone. This smoke will penetrate every crevice in

the hen-house, and will prove after a few trials very effectual. Then wash the roost or crevices where they are found with kerosene oil, after which put on a good coat of tar; it is also excellent for the roost-poles.

FOR SCALY LEGS.

Apply a little kerosene oil once a week. Be careful not to get on too much, or it will blister and injure.

HOW TO PICKLE EGGS.

1. A good, cool place is necessary. The temperature must be kept above the freezing point.

2. Select a good kerosene barrel and take out the head and set fire to the inside and burn it until slightly charred, then smother out the fire by turning it bottom side up. Scrape off charred parts and soak in lime-water, until the smell of kerosene is entirely removed.

3. *To Make the Pickle.*—Take one bushel of best fresh lime, one peck of rock-salt, and 60 gallons of clean water, (use similar proportions for smaller quantities.) Slake the lime as for making whitewash, add the rest of the water, and then the salt. Stir well two or three times the first day, and then let it stand until well settled and cold.

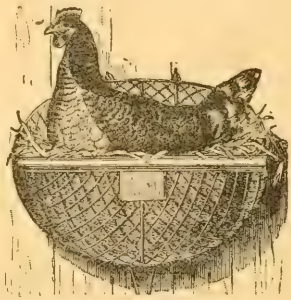
4. Now dip off the clear fluid carefully and put it into the barrel until about one-half full.

5. Now put in the eggs without breaking. When you have about a foot of eggs on the bottom of the barrel pour in some of the "milky" pickle made by stirring up the lime and water left. It is these light, fine particles of lime settling on the eggs and filling the pores that preserve the eggs.

6. Care should be taken not to put in too much or too little of the "milky" pickle, pour in enough to cover the eggs nicely when settled. If not enough lime the white of the egg will get watery, if too much it will stick on the outside like plaster, and be difficult to remove.

7. A faucet should be fitted into the barrel about six inches from the bottom, so that the pickle can be drawn off when necessary.

8. A common method for small quantities; Take a box or half barrel and first put in a layer of common salt, and then a layer of eggs, and so on, until the desired quantity is packed.



"Poultry Raisers' Egg Food Powder."

(TO MAKE HENS LAY EGGS.)

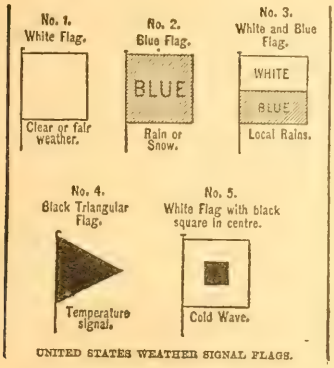
Red pepper powdered, 2 ounces,
Allspice powdered, 4 ounces,
Ginger powdered, 6 ounces.

Mix them by sifting.

One tablespoonful to be mixed with every pound of food, and fed 2 or 3 times a week.

Also feed chopped-up fresh meat.

HOW TO FORETELL THE WEATHER.



UNITED STATES WEATHER SIGNAL FLAGS.

WEATHER SIGNALS.

The above flags indicate the different kinds of weather that may be expected whenever either one of the above colors is displayed.

A white flag indicates fair weather; a blue flag rain or snow; a white and blue flag, colors arranged horizontally, white above and blue below, indicate rain; a triangular black flag, which if hoisted above either of the foregoing symbols, indicates higher temperature, and if below, lower temperature; and lastly the white flag with a black square in the center to indicate cold waves. The last named flag is also used as a frost symbol.

In many States the farmers and growers are warned of dangerous frosts, rains, etc., and consequently this system of signals is annually worth millions of dollars to the American people.

HOW TO FORETELL THE WEATHER.

The Different Kinds of Clouds and Weather Indications.

1. CLOUDS. Clouds are nothing but fog, and differ only in elevation above the earth. A fog resting on the top of a mountain is called a cloud, and a cloud resting on the surface of the earth is called a fog.

2. RAIN. Rain is only produced by accumulated moisture in the atmosphere, and this accumulation being seen in the form of clouds, hence all rain appears in the form of clouds. It is necessary then to understand the different forms of clouds and know their relation to each other.

3. CIRRUS. The Cirrus cloud, sometimes called "cats-tail," as the appearance and form are like wooly hair, a crest of feathers, or a slender net work. They are the highest of all the clouds. When they are very thin, they indicate fair weather; when very abundant and conspicuous, they indicate high winds or rain.

Names of the Clouds.

No. 1. CIRRUS. No. 4. NIMBUS.
No. 2. CIRRO CUMULUS. No. 5. STRATUS.
No. 3. CUMULUS.

4. CUMULUS. This cloud is in the form of a bale of cotton, and occurs in the lower regions of the atmosphere. In fair weather the Cumulus forms a few hours after sunrise, goes on increasing until the hottest part of the day, and then disappears at sunset. It generally indicates fair weather.

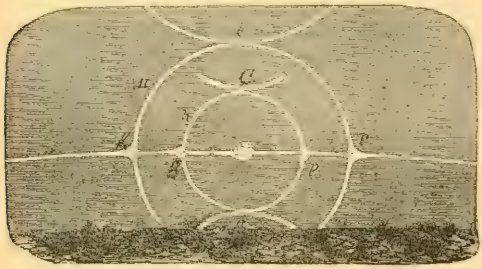
5. CIRRO-CUMULUS. These clouds have a sort of fleecy appearance, and are sometimes called wooly clouds. They indicate warm and dry weather.

6. STRATUS. This cloud consists of horizontal bands near the surface of the earth. It generally appears late in the evening or at night, forming at sunset and disappearing at sunrise. This Stratus is sometimes broken up into small parts, and is sometimes called "Mackeral Sky,"

and scientifically known as Cirro-Stratus. They indicate in that condition wind and rain.

7. NIMBUS OR RAIN CLOUD. The Cumulus Clouds often change into Nimbus, which are sometimes called Thunder Heads, and appear sometimes in great magnificence, and are easily known when seen. Thunder and lightning and wind and storms follow in their pathway.

8. SUNSET COLORS. A darkish gray sunset, with the clouds tinged with a green or a yellowish green, indicates rain. A red sunrise generally indicates rain, but a bright red sunset on the contrary is an indication of fair weather.



SUN DOGS AND CORONA.

9. HALO OR SUN DOGS. These are large circles around the sun or moon, having imitation suns and moons in the circle. A halo or sun dog appearing in fine weather indicates storm.

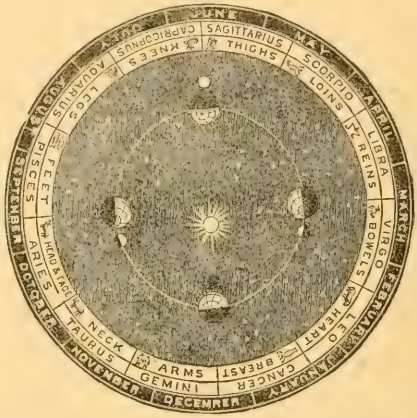
10. CORONA. These are small colored circles, particularly seen around the sun or moon. If the circles are small, they indicate rain; but if they grow larger, it indicates fair weather.

11. RAINBOWS. Rainbows in the morning are regarded as a sign of rain; but if a rainbow appears in the evening, the following day is generally fair.

12. SKY. A deep blue color of the sky indicates fair weather, but if this blue appearance of the sky grows lighter during the day it indicates an approaching storm.

13. FOGS. Fogs are generally an indication of fair weather.

STARS. If the stars are very thick and numerous it is a good sign of rain or storm, but if the stars are not very numerous in appearance and the sky is clear it indicates fair weather.



THE EARTH IN THE FOUR POSITIONS OF SPRING, SUMMER, FALL AND WINTER.

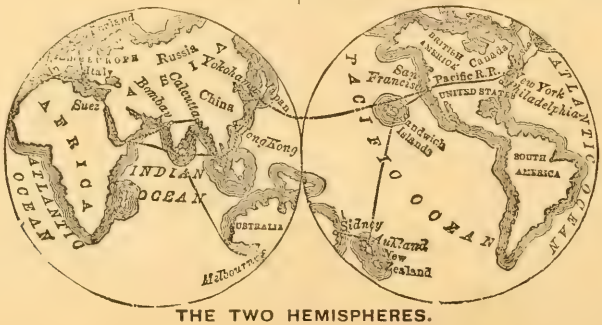
WEATHER WISDOM.

1. The following weather tables will be found valuable. They pertain to the moon's changes and are considered reliable.

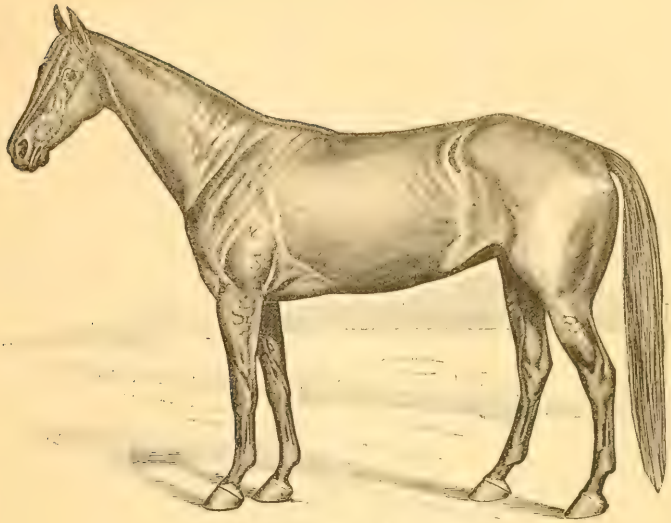
2. They are the results of many years' observation and are based on the attraction of the sun and moon, in their several positions respecting the earth.

3. It will take but little observation and care to prove their value.

IF NEW MOON, FIRST QUARTER, FULL MOON OR LAST QUARTER HAPPENS	IN SUMMER.	IN WINTER.
Bet. midnight and 2 a. m.	Fair.....	Frost unless wind S. W.
" 2 and 4 morning.....	Cold and showers....	Snow and stormy.
" 4 and 6 "	Rain.....	Rain.
" 6 and 8 "	Wind and rain.....	Stormy.
" 8 and 10 "	Changeable.....	Cold rain if wind W., snow if E.
" 10 and 12 "	Frequent showers...	Cold and high wind.
" 12 and 2 afternoon...	Very rainy.....	Snow or rain.
" 2 and 4 "	Changeable.	Fair and mild.
" 4 and 6 "	Fair.....	Fair.
" 6 and 8 "	Fair if wind N. W.	Fair & frosty if wind N. or N. E.
" 8 and 10 "	Rainy if S. or S. W	Rain or snow if S. or S. W.
" 10 and midnight.....	Fair.....	Fair and frosty.



THE TWO HEMISPHERES.



THE WORLD FAMOUS MARE MAUD S.

HOW TO USE THE BREEDERS' TABLE.

The following table will show the period of gestation and incubation of the different animals and fowls common on the farm.

TABLE GIVING THE PERIODS OF GESTATION AND INCUBATION OF DIFFERENT ANIMALS AND FOWLS.

Mare	48 weeks.	Bitch	9 weeks.	Partridge	24 days.
Cow	40 "	Goose	30 days.	Chicken	21 "
Ewe	22 "	Turkey	28 "	Pigeon	18 "
Goat	22 "	Duck	28 "	Canary	13 "
Sow	16 "	Pheasant	24 "	Peafowl	28 "

1. **Keeping Record.**—In the back part of this work are found the forms of keeping the record of the pedigree, time of gestation, etc.

2. **Value of Records.**—Every stock owner should have some system and record of his stock. It takes but a moment, and sometimes may be found of great value.

3. **Instructions.**—First refer to the month in the "Breeder's Table;" then under the name of the animal find the date opposite of the time of breeding and you will have the expected time.

4. **Examples.**—If a mare is bred April 19th, the expected time is March 19th. (See Table.) If a cow is bred April 26th, the expected time is January 26th. If a ewe is bred June 26th, the expected time is November 27th. If a sow is bred August 9th, the expected time is November 28th. These examples will all be found in the table, and no mistake can be made if the tables are properly consulted.

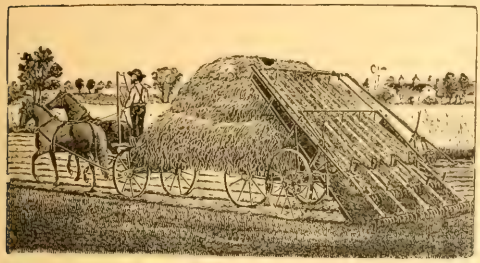
FARMERS' SHORT RULES OF ARITHMETIC.



1. **How to Find the Number of Tons of Hay in a Mow.**—Multiply the length of the mow in feet, by the width in feet, and that by the height in feet, and divide the result by 400 if the hay is well settled (or, by 500 for new hay), and you have the number of tons in the mow.

2. **How to Find the Number of Tons of Hay in a Stack.**—Let the hay settle 30 days. Then measure over the stack with a tape line from ground to ground in feet, and then find the width of the stack in feet and add the two results together, and divide the sum by 4, then multiply this result by itself, and multiply that number by the length of the stack in feet, and divide the product by 400 (or, for greater accuracy, by 420), and you will have the number of tons in the stack. If it is a round stack, simply multiply the distance around the stack in the largest place by one-third of the height, and point off the two right hand figures, and you have the number of tons in the stack.

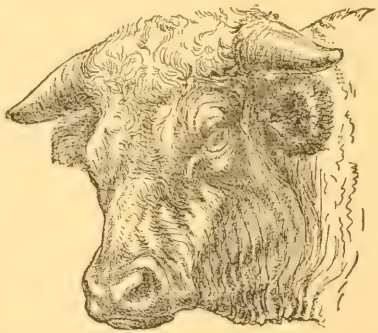
3. **How to Find the Cost of a Load of Hay.**—Multiply the weight by one-half the price per ton, point off the three right hand figures, and the figures at the left will be the amount in dollars and cents that the load comes to.

4. **How to Measure Ear Corn in a Crib.**—Multiply the length in feet by the height in feet, and that again by the width in feet, and multiply the result by 4, (or, for good, sound corn well settled, by 5), and cut off the right hand figure, and you have the contents in bushels of shelled corn. When the crib is flared at the side, find the average width by adding together the top and bottom widths, and dividing by 2.

5. **How to Find the Number of Bushels of Grain in a Box or Bin.**—Multiply the length in feet by the height in feet, and that again by the breadth in feet, and then again by 8, and cut off the right hand figure. The result will be the number of bushels.

6. **How to Find the Number of Heaped Bushels of Ear Corn, Apples or Potatoes in a Crib or Bin.**—Multiply the length in feet by the breadth in feet, and that again by the height in feet, and multiply the result by 6, cut off the right hand figure, and you have the number of heaped bushels.

7. **How to Find the Contents of a Wagon Box.**—Multiply the depth of the wagon box in inches by 2, and you have the number of bushels. A common wagon box is a little more than ten feet long and three feet wide, and will hold about two bushels for every inch in depth. If the wagon box is 11 feet long, multiply the depth in inches by 2, and add one-tenth of the number of bushels to itself.



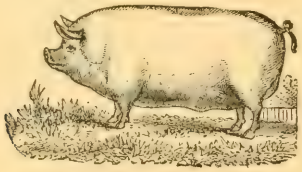
8. **How to Find the Weight of Cattle by Measurement.**—Multiply the distance around the animal (back of the fore-shoulder) in feet by itself, and then multiply that result by 17.5 and you have the weight of the animal very near. For more accurate results instead of multiplying by 17.5, multiply by five times the length of the animal in feet (measuring from the fore-part of the shoulder blade to the bone at the tail, in a vertical line with the buttocks), and divide this product by 1.5 for average cattle, (very fat by 1.425; very lean by 1.575) and you have the dressed weight of the animal.

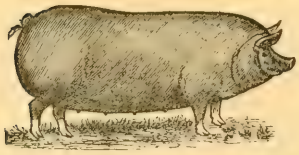
9. **How to Find the Price per Hundred, When Sold by the Ton.**—Multiply the price in dollars per ton by 5, and the result will be the price in cents per hundred.

10. **How to Find the Contents of Tanks and Cisterns.**—If the cistern or tank is square, multiply the height, width and depth in feet together, and divide the product by 4, and the result will equal the number of barrels the cistern will hold. If the cistern or tank is

round, multiply the diameter in feet by itself, and multiply that by the depth in feet, and divide the product by 5, and you will have the number of barrels the cistern or tank will hold.

* 11. **How to Find the Contents of Barrels and Casks.**—Add together the diameters at the bung and head in inches, and divide the sum by 2, and the result will be the average diameter. Now multiply this result by itself, and multiply the product by the length of the barrel or cask, in inches. Multiply this result again by 34, and cut off the four right hand figures, and you will have the number of gallons.





12 **Gross and Net Weight of Hogs.**—It is assumed that the gross weight of hogs, diminished $\frac{1}{5}$ or 20 per cent. of itself, gives the net weight, and the net weight increased by $\frac{1}{4}$ or 25 per cent. of itself equals the gross weight. Thus: If the gross weight of a load of hogs is 1800 pounds, the net weight would be $\frac{1}{5}$ or 360 less, or 1440 pounds. If the net weight is 1440 pounds, the gross weight will be $\frac{1}{4}$ or 360 pounds more, or 1800 pounds.

13. **How to Find the Number of Common Brick in a Wall.**—Multiply the length of the wall in feet by the height in feet, and that by its thickness in feet, and then multiply that result by 16, and the product will be the number of bricks in the wall.

14. **How to Find the Number of Yards of Carpet to Cover a Floor.**—Multiply the length of the room in feet by the width in feet and divide the result by 9, and you have the number of yards of carpet required, if the carpet is one yard wide. If the carpet is only $\frac{3}{4}$ of a yard wide proceed as above, and then multiply by 4 and divide by 3.

15. **An Easy Way to Multiply by 11.**—To multiply any two figures by 11, add the two figures together and place their sum between the two figures of that number. If the sum of the two figures exceeds 9, the left hand figure must be increased by 1.

16. **How to Find the Number of Acres in a Field.**—If the field is rectangular, multiply the length in rods by the breadth, and divide by 160. If the piece is triangular, multiply the length in rods by the breadth and divide by 2. Then divide by 160, and the result will be the number of acres in the field.

1. Example: How many acres in a piece of land 80 rods long and 20 rods wide? $80 \times 20 = 1600$, $1600 \div 160 = 10$ acres.

2. Example: How many acres in a triangular field 80 rods long and 40 rods wide? $80 \times 40 \div 2 = 1600$ sq. rods. $1600 \div 160 = 10$ acres.

17. **How to Measure Wood.**—Multiply the length, breadth and height in feet together, and divide by 128. The result will be the number of cords.

Example: How many cords in a pile of wood 20 feet long, 4 feet wide, and 8 feet high? $20 \times 4 \times 8 = 640$. $640 \div 128 = 5$ cords.

18. **How to Measure Boards.**—Find the width of the boards in inches, and add together, and the sum obtained will be equal to the number of feet in the pile if the boards are 12 feet long. If the boards are 14 feet long add $\frac{1}{6}$ of itself, if 16 feet long add $\frac{1}{3}$ of itself, and you will have the number of feet in the pile.

Example: How many feet of lumber in 12 boards, 10 inches wide, and 14 feet long? $12 \times 10 = 120$; $\frac{1}{6}$ of $120 = 20$; $20 + 120 = 140$, the number of feet.

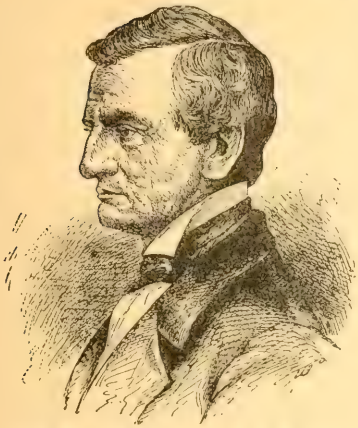
19. **How to Measure Scantlings, Joists, Planks, Etc.**—Multiply the width in inches by the thickness in inches, and multiply the result by the length in feet and divide by 12, and you will have the number of square feet.

Example: How many feet of lumber in a scantling 4 inches wide, 2 inches thick, and 18 feet long? $4 \times 2 \times 18 = 144$. $144 \div 12 = 12$ feet of lumber.

20. **How to Find the Number of Shingles Required for a Roof.**—Multiply the length of the roof by twice the length of one rafter, and multiply the result by 8 if the shingles are to be exposed $4\frac{1}{2}$, or, by 7 if the shingles are to be exposed 5 inches to the weather, and you will have the number of shingles required.

Example: How many shingles will it take to cover a roof 30 feet long, and the rafters 12 feet long; shingles to be exposed $4\frac{1}{2}$ to the weather? $30 \times 12 \times 2 = 720$. $720 \times 8 = 5760$ shingles required for the roof.

THE LAW OF INTEREST AND USURY.



HON. WILLIAM M. EVARTS, OF NEW YORK.

The man who received $250,000 for saying "Yes."

1. **Legal Interest.**—The rate prescribed by law is the legal rate; and any rate in excess of that is termed usury. The rate of interest, if not regulated by law, would depend mainly upon two circumstances. These are, first, the demand for money compared with the supply accessible; and, second, the risk that a lender would run of not receiving it back as agreed. With plenty of money and little demand for it, and also very little risk of losing to be incurred, the rate would be low.

2. **In Different States.**—If a contract is made in one State to be performed in another, the laws of the latter State determine the rate of interest.

3. **If Nothing is Stated.**—If nothing is stated, a debt is supposed to be payable where it was contracted; and the rate of interest is controlled by the laws of that place.

4. **Book Accounts.**—In ordinary book accounts, interest is not allowed unless specially agreed, or when a term of credit is named. In this latter case interest may be charged after the term expires. When an account has been adjusted, the balance bears interest from date of liquidation.

5. **Rent Past Due.**—Interest is allowed by law on rent past due from the time it was due.

6. **Legal Claims.**—All good, legal claims bear interest from the time they become due; hence all insurance policies, past due, draw interest from their due date.

7. **Collecting Money for Another.**—One who collects money for another, which he should have accounted for at once, can be made to pay interest from date of collection.

8. **Fraud.**—When one obtains money from another by fraud, and is compelled to return it, he is liable, also, for interest on it from the time he obtained it.

9. **Partial Payments.**—In computing interest on debts, when partial payments have been made, the payments are first applied to reduce the interest; but if the payment does not equal the interest due, interest is calculated on the debt until such time as the sum of the payments equals or exceeds the interest. The interest is then added to the principal, the sum of the payments deducted, and the balance forms a new principal.

10. **The General Rule.**—The general rule of law is that, when money which is certainly due one person is withheld from him by another, the latter is bound to pay interest for such detention.

RAPID SIX PER CENT. METHOD.

HOW TO FIND THE INTEREST AT SIX PER CENT. FOR MONTHS.

Multiply the principal by one-half the number of months, and point off two figures from the right.
Example: What is the interest on $150, for 6 months?
Solution: $150 × 3 (half the number of months) = $4.50.

HOW TO FIND THE INTEREST FOR MONTHS AND DAYS AT SIX PER CENT.

Multiply the principal by the number of days; divide the product by 6, and point off three figures from the right.
Example: What is the interest on $250 for 4 months and 18 days?
Solution: 4 months equal 120 days. 120 + 18 = 138. 138 × 250 = 34.50. 34.500 ÷ 6 = $5.75.

TO FIND THE INTEREST AT ANY OTHER RATE THAN SIX PER CENT.

First find the interest at 6 per cent.; then multiply the interest by the required rate and divide by 6, and the result will be the interest required. Thus, in the above example the interest is $5.75 at 6 per cent. To find the interest at 7 per cent. the operation will be as follows: $5.75 × 7 = 40.25. 40.25 ÷ 6 = $6.70 +

The Celebrated Lightning Methods for Calculating Interest.

WHERE THE TIME IS FOR DAYS ONLY.

RULE:—To find the interest on any given sum for any number of days, multiply the principal by the number of days, and divide as follows:

At 5 per cent., divide by 72.
At 6 per cent., divide by 60.
At 7 per cent., divide by 52.
At 8 per cent., divide by 45.
At 9 per cent., divide by 40.
At 10 per cent., divide by 36.
At 12 per cent., divide by 30.

EXAMPLE:—What is the interest on $1000.00 for 6 days at 6 per cent.?

SOLUTION:—1000 × 6÷60 = $1.00.

WHEN THE TIME CONSISTS OF YEARS, MONTHS AND DAYS.

1. RULE.—Reduce years to months, adding the number of months, then place one-third of the number of days to the right of the months, with a decimal point between.

2. Then remove the decimal point two places to the left in the principal, and divide by 2, and the result will equal the interest for one month at 6 per cent.

3. Multiply the interest for one month by the number of months, and the product is the interest at 6 per cent. for the given time.

Then add ⅙ of itself for 7 per cent.
" " ⅓ of itself for 8 per cent.
" " ½ of itself for 9 per cent.
" " ⅔ of itself for 10 per cent.

Subtract ⅙ of itself for 5 per cent.
" " ⅓ of itself for 4 per cent.

EXAMPLE:—Find the interest on $300, at 8 per cent., for 1 year, 3 months and 15 days.

SOLUTION:—$3.00÷2 = $1.50 interest for 1 month. 1 year, 3 months and 15 days = 15.5 months.
$1.50 × 15.5 = $23.25 interest at 6 per cent. 23.25 + 7.75 = $31.00, interest at 8 per cent.

N. B.—The $7.75 is one-third of $23.25.

HOW TO USE THE INTEREST TABLES.

1. The interest on any sum of money, and for any length of time may be obtained, by adding to or doubling any certain sum, or length of time in the tables, viz: If the interest on a certain sum of money at 8 per cent. for a given time should be $20.00, one-half of $20.00 or $10.00 would equal the interest at 4 per cent., etc.

2. If the interest at 6 per cent. should amount to $4.33, on a certain sum of money for a given time, twice that amount or $8.66 would equal the interest at 12 per cent., etc.

3. The tables are computed on the principle of 360 days in a year, the rule adopted by bankers and merchants throughout the entire country.

4. When the fraction of interest is a half a cent or more, a whole cent is taken, but when less than a half cent, nothing is charged.

EXAMPLE:—To find the interest on $195.00 for one year, five months, and 23 days, at 6 per cent. according to table, proceed as follows:

Interest on	$100,	for	1	year	at	6	per	cent.,				$6.00
"	"	90,	"	1	"	"	6	"	"			5.40
"	"	5,	"	1	"	"	6	"	"			.30

COTTON SELLERS AND COTTON PICKERS DEPARTMENT.

PICKING COTTON.

HOW TO USE THE COTTON SELLERS' TABLE.

The price per pound and per hundred weight is always at the top of the page. For example, 3 1-16 cents or 3.06¼ means 3 1-16 cents a pound or $3.06¼ a hundred pounds; 3 1-20 cents or $3.05 means 3 1-20 cents a pound, or $3.05 a hundred pounds.

The first column, and every succeeding column in **black faced type,** represents the number of pounds; the second column the amount in dollars and cents at the price given at the top of each section of page.

EXAMPLE:—What will 449 pounds of cotton bring at 3 1-16 cents per pound?

SOLUTION:—Find the 449 in the column of pounds under the price of 3 1-16 cents and opposite in the next column you will find $13.75, the answer.

In the tables of this book calculations are made in 16ths and 20ths. It might be convenient at times to know the answer in 32ds and 40ths. In table No. 1 below we give the value of any bale of cotton at 1-32 of a cent. In table No. 2 we give the value of any bale of cotton at 1-40 of a cent, or at 2½ points.

TABLE NO. 1.—ESTIMATES FOR 1-32.

From 300 pounds to 304 pounds	9 cents
From 305 pounds to 336 pounds	10 cents
From 337 pounds to 368 pounds	11 cents
From 369 pounds to 400 pounds	12 cents
From 401 pounds to 432 pounds	13 cents
From 433 pounds to 464 pounds	14 cents
From 465 pounds to 496 pounds	15 cents
From 497 pounds to 528 pounds	16 cents
From 529 pounds to 560 pounds	17 cents
From 561 pounds to 592 pounds	18 cents
From 593 pounds to 624 pounds	19 cents
From 625 pounds to 656 pounds	20 cents
From 657 pounds to 688 pounds	21 cents
From 689 pounds to 699 pounds	22 cents

TABLE NO. 2.—ESTIMATES FOR 1-40 OR 2½ POINTS.

From ... pounds to 300 pounds	7 cents
From 301 pounds to 340 pounds	8 cents
From 341 pounds to 380 pounds	9 cents
From 381 pounds to 420 pounds	10 cents
From 421 pounds to 460 pounds	11 cents
From 461 pounds to 500 pounds	12 cents
From 501 pounds to 540 pounds	13 cents
From 541 pounds to 580 pounds	14 cents
From 581 pounds to 620 pounds	15 cents
From 621 pounds to 660 pounds	16 cents
From 661 pounds to 699 pounds	17 cents
